Leadership to promote the use of research evidence by nurses

By: Janelle Arthurs, Second Year BScN Student | Supervisor: Wendy Gifford, RN PhD
Faculty of Health Sciences, School of Nursing

Introduction
Health care delivery can be improved if nurses routinely use research evidence to guide clinical practice.
An integral part of nursing practice, research use is the foundation for high quality patient care and positive patient outcomes.
However research use is difficult and challenges exist.
Strong multi-level leadership can enhance research use by nurses.
Lack of clarity exists about what constitutes effective leadership for research use.

Study Purpose
The purpose of this systematic review is to discover the leadership behaviors of managers that successfully promote research use by nursing staff to improve the quality of health care delivery by clinical nursing staff.

Research question
What are the leadership behaviours of healthcare managers (front line and senior managers) associated with successfully promoting research use by nursing staff to improve the quality of health care delivery by clinical nursing staff?

Methodology:
A systematic review using the following steps:

1. Formulate a research question
2. Search the Literature
3. Screen for inclusion/exclusion criteria
4. Data Extraction & Quality Appraisal
5. Narrative Synthesis

RESULTS: Leadership and Management Behaviours

<table>

DISCUSSION
There are 4 overarching themes:
- Being a team player was identified in most studies.
- A team player listens to others, collaborates, and shares governance
- Psycho-social encouragement is associated with encouraging staff in their attempts to change
- Providing resources involves making mentors, tools, and information available for staff

Leaders that reinforce a vision of best practices set goals for their staff, provide feedback, and evaluate current strategies.

Committed leaders take the time to make themselves available to their staff.

Conclusion
Nurse managers are in a unique position to influence staff to utilize research in their clinical practice.
Leaders that are team players, encourage staff, provide resources, reinforce vision and demonstrate commitment will be most successful.
Findings will help managers better support nurses to implement research evidence in practice.
The knowledge generated from this systematic review can help improve the quality of healthcare delivery and outcomes for patients.

Acknowledgements
Thank you to the University of Ottawa and the Undergraduate Research Program (UROP) for funding this project.
Special thanks to Dr. Wendy Gifford for supervising this study and to Selham Rabaa, Yanni [顿悟], and the study team for their work and contributions.
Thank you also to the Nursing Best Practice Research Centre (NBPRC) for support.
I would also like to acknowledge Doniya Quenneville for her role as my student mentor.
