ACKNOWLEDGEMENTS

The authors wish to thank those who participated in this study as discussion group participants (in alphabetical order): Dean “Manny” Arey, Dennis Arey, Joe Arey, Nellie Arey, Renie Arey, Annie B. Gordon, Colin Gordon, Danny C. Gordon, Patrick Gordon, and William Storr; Jessi Pascal (research assistant); Tristan Pearce, Gita Ljubicic, Amos Hayes, Olivia Mussels, and Jennie Knopp (technical advice); the University of Ottawa Geographic, Statistical and Government Information Centre, Aklavik Hunters and Trappers Committee, Aklavik Community Corporation, and Inuvialuit Game Council for project support.

The authors also wish to acknowledge the financial support of Marine Environment Observation Prediction and Response Network (MEOPAR), World Wildlife Fund-Canada, Irving Shipbuilding Inc., and the Social Sciences and Humanities Research Council (SSHRC) of Canada.

PARTICIPANT BIOGRAPHIES
(IN ALPHABETICAL ORDER)

DEAN “MANNY” AREY is President of the Aklavik Hunters and Trappers Committee and Director of the Aklavik Community Corporation. Dean is an active harvester and trapper. He is also involved in the Mad Trapper Rendez-vous and Aklavik Spring Music Festival, Sam Arey Curling Club, Shingle Point Summer Games Committee. He is the foreman at the Hamlet. He also sits on the Inuvialuit Land Administration Commission. He is often the MC for community events. He is a husband and father of four children.

DENNIS AREY is an active harvester and trapper. He has worked in oil and gas, construction, as a char monitor, and as part of the bowhead tagging program.

JOE AREY is Director of the Inuvialuit Elders Committee. Joe is an active harvester and trapper in the winter, getting out on the land regularly. He regularly works with the school for on the land programs to share his knowledge with youth. He has sat on the AHTC in the past. He is an active member of community life.

NELLIE AREY is Director of the Inuvialuit Elders Committee. She is an active Inuvialuit harvester. She likes to spend time at her camps at West Channel and Shingle Point. She’s a very respected seamstress in the community and region.

RENIE AREY is Director of the Aklavik Hunters and Trappers Committee and is an active harvester. She has been involved in Committee of Peoples Entitlement and Inuvialuit Final Agreement negotiations. Renie is a role model for people in the community, is active on the land, has worked for the Inuvialuit Cultural Resource Centre, for the Inuvialuit Communications Society and as the HTC resource person.
ANNIE B. GORDON is Chairperson of the Inuvialuit Elders Committee and is an active harvester. She is involved in school activities. Annie is a respected Gwich’in descent but is an Inuvialuit. She does Gwich’in interpretation as needed and has been a Gwich’in language teacher. She is involved with the Justice Committee. She sat on the Aklavik HTC in the past. She likes to pass on her knowledge to the younger generation.

COLIN GORDON worked as a Park Ranger at Herschel Island Territorial Park for 11 years. He is on the Elders Committee. He worked as an ILA land monitor and as a marine mammal observer.

WILLIAM STORR is Secretary-Treasurer of the Aklavik Hunters and Trappers Committee. Billy is an active fisherman. He loves to fish. He sits on the Hamlet Council and is a representative to the Inuvialuit Game Council. He is the AHTC delegate for the review of the plans by Parks Canada and Yukon Parks for Ivavik and Herschel Island respectively.
EXECUTIVE SUMMARY

Ship traffic in the Canadian Arctic nearly tripled between 1990 and 2015. Corridors have been mapped in the Arctic Ocean as part of the Low Impact Shipping Corridors Initiative co-led by Transport Canada, the Canadian Coast Guard, and Canadian Hydrographic Service. Low impact shipping corridors are the current framework for governing shipping in the Canadian Arctic. The intent of the low impact shipping corridors is to reduce the likelihood of marine incidents by providing predictable levels of service to mariners transiting the corridors. Identification of Inuit and northerners’ perspectives on the potential impacts of marine vessels on marine areas used for cultural and livelihood activities, and on community members, and the inclusion of Inuit and northerners’ voices in the development of potential management strategies for the low impact shipping corridors and Arctic marine vessels transport are key considerations in the current prioritization of the corridors.

This report reflects opinions gathered through participatory mapping, focus group discussions, and interviews with Aklavik community members who were identified by local organizations as key knowledge holders. Analyses were aimed at understanding Inuit and northerners’ perspectives on the potential impacts of marine transportation on local marine use areas and community members, and on identification of potential management strategies for the low impact shipping corridors and for Arctic marine vessels management. This report was validated by the research participants.

THE SPECIFIC PROJECT OBJECTIVES WERE TO:

- describe local marine use areas including significant socio-cultural, archaeological and ecological areas, and local travel routes, for integration into the low impact shipping corridors;
- outline potential impacts of marine vessels on identified marine use areas and community members; and
- provide recommendations regarding management of the low impact shipping corridors and Arctic marine vessels.

KEY FINDINGS OF THE PROJECT ARE:

- Potential impacts of marine vessels transiting through the low impact shipping corridors include
  - contamination or pollution of Arctic waters, animals, and people;
  - behavioural changes in wildlife;
  - increased food insecurity;
  - increased expenses incurred by hunters, decreased revenue from pelt sales; and
  - limited income and revenue opportunities
- Disruption of sea ice formation by icebreakers and marine vessels is especially disruptive to polar bears and seals, and may lead to potential food insecurity in the community.
- Existing oil spills/groundings response capacity is not sufficient - locally, federally, on vessels.

RECOMMENDATIONS INCLUDE:

- Avoiding community-identified culturally significant marine areas particularly during times of local use for harvesting; and
- Increasing communication between ships and the Hunters and Trappers Committee (HTC), between the HTC, Aklavik Community Corp (ACC) and Hamlet, and between the HTC and Environmental Impact Screening Committee (EISC).

The results of this study should be shared in all communities in the Inuvialuit Settlement Region. This study should be conducted in all communities in the Inuvialuit Settlement Region, and the results should be shared with the research participants in Aklavik.
BACKGROUND

Ship traffic in the Canadian Arctic nearly tripled between 1990 and 2015.1 Corridors have been mapped in the Arctic Ocean as part of the Low Impact Shipping Corridors Initiative co-led by Transport Canada, the Canadian Coast Guard, and Canadian Hydrographic Service (Figure 1). The Low Impact Shipping Corridors Initiative is the current framework for governing marine transportation in the Canadian Arctic.

The goal of the initiative is to reduce the likelihood of shipping incidents. Inuit and northerners’ perspectives on the potential impacts of shipping on marine areas used for cultural and livelihood activities, and potential management strategies for the low impact shipping corridors and Arctic marine vessels are key considerations in the current prioritization of the corridors.

This report documents Aklavik community members’ knowledge and extensive year-round use of important marine areas (ecological, socio-cultural, archaeological, and travel routes), the potential impacts of shipping on those areas and on community members, and recommendations for management of the low impact shipping corridors.

![Figure 1. Low impact shipping corridors](image-url)
Figure 2. Low Impact Shipping Corridors near Aklavik, Northwest Territories
In the Canadian Arctic, when comparing the average annual number of kilometres of shipping activity from 1990-2000 to the annual average from 2011-2015, shipping increases have been predominantly focused in the eastern Arctic, particularly around SW Baffin Bay (e.g., Pond Inlet, Qikiqtarjuaq, Iqaluit,) in the Queen Maud Gulf area (e.g., Cambridge Bay and Gjoa Haven), and NW Hudson Bay (e.g., Chesterfield Inlet) (**Figure 3**).¹ Changes in Hudson Strait have been generally minor (e.g., Cape Dorset, Kimmirut), and changes in the High Arctic have been negative (e.g., Resolute, Arctic Bay, Eureka).¹ The Inuvialuit Settlement Region experienced a 6,497 km increase in shipping from 2011-2015 compared to 1990-2000 and Aklavik experienced a 1,630 km increase, the second largest increase in the Inuvialuit Settlement Region (**Figure 4**).¹

**Figure 3.** Change in shipping activity (km) in the Canadian Arctic: 1990-2000 annual average compared to 2011-2015 annual average
FOUR SEASONS

There are 4 main seasons in Aklavik, Northwest Territories. The seasons are weather and ice dependent therefore the months each season happens in can be different each year. However, in general the seasons are:

<table>
<thead>
<tr>
<th>SEASON</th>
<th>MONTHS IN WHICH IT HAPPENS</th>
<th>OCEAN CONDITIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>SPRING</td>
<td>MARCH TO END OF JUNE</td>
<td>FROZEN AND SEA-ICE BREAK-UP IN MAY</td>
</tr>
<tr>
<td>SUMMER</td>
<td>JULY TO THE END OF AUGUST</td>
<td>OPEN WATER</td>
</tr>
<tr>
<td>FALL</td>
<td>END OF AUGUST TO END OF OCTOBER</td>
<td>OPEN WATER</td>
</tr>
<tr>
<td>WINTER</td>
<td>NOVEMBER TO END OF FEBRUARY</td>
<td>SEA-ICE FREEZE-UP AND FROZEN</td>
</tr>
</tbody>
</table>

Figure 4. Change in shipping activity (km) near Aklavik, Northwest Territories: 1990-2000 annual average compared to 2011-2015 annual average.
Figure 5. Seasonal cycle of harvesting activities in and near Aklavik, Northwest Territories

LONG-TAILED DUCK * People referred to long-tailed ducks by the old, no longer used name of Oldsquaw.

GEESE * includes Canada Goose, Snow Goose, White-fronted Goose, and Brant Goose

FISH * includes Arctic Cisco (*Coregonus autumnalis*), Arctic Grayling (*Thymallus arcticus*), Broad Whitefish (*Coregonus nasus*), Coney or Inconnu (*Stenodus leucichthys*), Lake Trout (*Salvelinus namaycush*), Lake Whitefish/Crooked Backs (*Coregonus cluepeaformis*), and Northern Pike/Jackfish (*Esox lucius*)

* Year-round: Fish, Caribou, Moose, Otter
MAPS OF CULTURALLY SIGNIFICANT MARINE AREAS (CSMAS)

MAPS INCLUDE:

1. Location of animals, marine mammals, and fish;
2. Location of community members’ activities as well as camps and burial sites; and
3. Local travel routes and safe harbours.

Maps will be available at www.arcticcorridors.ca, and in Aklavik at Aklavik Hunters and Trappers.

# Potential Impact of Marine Vessels

Potential impacts of marine vessels travelling though the low impact shipping corridors, and related recommendations, are described in Table 1.

<table>
<thead>
<tr>
<th>Potential Impact of Marine Vessels</th>
<th>When It May Happen</th>
<th>Related Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Beluga, bowhead, char and seals may be scared away by ship noise making it harder for hunters to harvest them, resulting in</td>
<td>June to November (Open Water)</td>
<td>1) No ships in culturally significant marine areas during harvesting season (Figure 12).</td>
</tr>
<tr>
<td>1) fewer successful hunts; and</td>
<td></td>
<td>2) Alaska shuts down industry in September when the fall whale hunt happens. The community of Aklavik should be able to communicate with ships to tell them to avoid certain areas the same way Alaska does.</td>
</tr>
<tr>
<td>2) less country food for people.</td>
<td></td>
<td>3) Ship operators should call the Hunters and Trappers Committee (HTC) to find out if anyone is harvesting in the corridors then detour around (Figure 12).</td>
</tr>
<tr>
<td>This will cause hardship in the community. Store-bought food is prohibitively expensive. Country food cannot be replaced with store-bought food. Elders who are used to having country food all the time will be particularly affected. Store-bought food is not as nutritious as country food so health problems will occur. Country food is what people prefer.</td>
<td></td>
<td>4) Marine mammal observers should be on every vessel and have a way to contact the community.</td>
</tr>
<tr>
<td>Ice-breaking would impact polar bears and seals, and therefore impact hunters. Ice-breaking impacting the ice will</td>
<td>Freeze-up and Frozen: October 1 through June 30</td>
<td>5) Increase communication about shipping activity between ships and HTC; between HTC and community members on the land; between Aklavik Community Corporation (ACC), Hamlet and HTC; and between Environmental Impact Screening Committee (EISC) and HTC.</td>
</tr>
<tr>
<td>1) impact polar bear and seal habitat thus they will move away from the coast; and</td>
<td></td>
<td>1) Icebreakers and Canadian Coast Guard (CCG) should communicate with the HTC about ice-breaking activities, in case people are out harvesting. CCG should contact the HTC when entering Canadian waters (approaching from the west) and when passing Tuktoyaktuk (approaching from the east).</td>
</tr>
<tr>
<td>2) impact seal denning. Polar bears will move away if there are less seals (their food source).</td>
<td></td>
<td>2) CCG should be taking out the markers earlier in the year (e.g. September or after the last barge and before freeze-up).</td>
</tr>
<tr>
<td>Impacts on hunters include</td>
<td></td>
<td>3) No ice-breaking in polar bear hunting areas during harvesting times (Figure 18).</td>
</tr>
<tr>
<td>1) buying gas and grub to hunt but if unsuccessful then also have to buy store-bought food;</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2) loss of revenue if no pelt to sell; and</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3) unsafe ice that people travel on, can result in death by going through the ice.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
## Table 1. Continued

If an oil spilled occurred, water quality would be impacted. Reduced water quality impacts fish, whales, birds, and waterfowl that people rely on for subsistence. This has negative consequences for food security.

<table>
<thead>
<tr>
<th>YEAR-ROUND</th>
</tr>
</thead>
</table>
| 1) North slope Distant Early Warning (DEW) Line sites should be outfitted with spill response equipment that can be used in the event of coastal oil spills.  
(Figure 21) |
| 2) Aklavik residents should be provided with spill-response equipment and training before a spill happens. |
| 3) A community member from Aklavik should be hired to monitor refuelling at north slope DEW Line sites. |
| 4) A safety boom should be used when north slope DEW Line sites are being refueled. |
| 5) The HTC should be notified 1 month ahead by letter when ships are coming to DEW Line sites to refuel. |

If pollution occurred water quality would be impacted. Pollution in the ocean impacts fish, whales, birds, and waterfowl that people rely on for subsistence. This has negative consequences for food security.

<table>
<thead>
<tr>
<th>YEAR-ROUND</th>
</tr>
</thead>
<tbody>
<tr>
<td>No dumping of garbage, greywater, detergents, or ballast water anywhere in Canadian waters. Ships must carry those substances to their final destination. Do not rely on community infrastructure to offload waste.</td>
</tr>
</tbody>
</table>

Aklavik residents do not have enough search and rescue training and currently use their own equipment for search and rescue. People in the community would be the first responders in case of an oil spill or rescue operation.

<table>
<thead>
<tr>
<th>YEAR-ROUND</th>
</tr>
</thead>
<tbody>
<tr>
<td>CCG should provide search and rescue training and equipment, and equipment maintenance. They should work with first responders in Aklavik to do maintenance which in turn provides more training. First aid training should be provided for oil spill and search and rescue first responders by the same people who are providing oil spill and search and rescue training.</td>
</tr>
</tbody>
</table>
RECOMMENDATIONS FOR MANAGING SHIP TRAFFIC USING THE LOW IMPACT SHIPPING CORRIDORS

MAPS OF RECOMMENDATIONS FOR LOW IMPACT SHIPPING CORRIDORS

MAPS INCLUDE

- minimum distances from shore and marine mammals, and areas where oil spill equipment is needed.

Maps will be available at www.arcticcorridors.ca, and in Aklavik at Aklavik Hunters and Trappers.
Figure 21. Recommendations for low impact shipping corridors- no shipping or icebreaking within 75 km from shore.
Figure 22. Recommendations for low impact shipping corridors - stay 1500 metres away from all marine mammals.
Figure 23. Recommendations for low impact shipping corridors- areas where spill equipment is required.
ADDITIONAL RECOMMENDATIONS AND REQUESTS

AKLAVIK COMMUNITY MEMBERS ASK THAT ALL SHIPS:

• Stay 1500m away from marine mammals including polar bears. Underwater noise is loud and travels far under water and drives away whales, seals, polar bear and fish.
• Consult the community when planning a visit or passage. Tell HTC arrival dates one year ahead and also a few days before arrival; and
• Tell HTC when they are going to be travelling near harvesting/use areas.

AKLAVIK COMMUNITY MEMBERS ASK THAT CRUISE SHIPS:

• Have marine mammal observers on board who keep a log to be given to HTC for each trip;
• Continue to welcome Rangers on board to educate the crew and passengers about Herschel Island but include cultural hosts from Aklavik as well (paid for by Yukon Parks);
• Continue to use specific trails at Herschel Island;
• Continue to respect the Park Plan limit of 50 people on Herschel Island at a time;
• Continue to pay land use permit fees to Parks just as any tourist outfitter has to pay (for day use); and
• Have drummers and dancers go out to the cruise ship (as suggested in the Park Plan and as paid for by Parks or cruise ship).

AKLAVIK COMMUNITY MEMBERS ASK THAT THE HERSCHEL ISLAND TERRITORIAL PARK PLAN INCLUDES:

• Extending the park season or have someone police and restrict access to the park, until the end of September so that the park is monitored throughout the boating season.

AKLAVIK COMMUNITY MEMBERS ASK THAT:

• Customs officers get flown to cruise ships before
  1) cruise ships enter Canadian water from another country and
  2) anyone steps foot on land. At the same time ships should be inspected to ensure they have equipment for oil spill response and safety equipment and charts to travel the Northwest Passage;
• Helicopters, including Canadian Coast Guard, not fly under 1000 feet unless the weather makes it necessary;
• Aklavik harvesters continue to carry VHF radios to communicate with ships;
• Seismic activity continues to only be conducted for maximum 6 weeks per year. Seismic operators should notify the HTC by phone if they are changing their plan, and avoid harvesting areas;
• The Aklavik Community Corporation continue to look into how the community can be best prepared to maximize revenue from cruise ships especially Crystal Serenity;
• Outfitters taking tourists to Herschel Island, and any tourists, should not consider the HTC cabin as their Plan B for emergencies. They should be self-sufficient;
• HTC continue to discuss having safety rafts with domed covers on Herschel Island or Shingle Point to be able to transport people when there is flooding or high winds; and
• The results of this work is shared with students and the newly formed youth council.
CONCLUSION

The number of marine vessels in Canadian Arctic waters continues to grow. At the same time, the Northwest Passage is receiving unprecedented international attention related to sovereignty, interest from tourism operators, and the immense cost savings that a commercially navigable Arctic route would present. Aklavik, located inland on the Peel Channel, has experienced a moderate increase in marine vessel activity in recent decades. However, the marine areas that are most significant to community members’ subsistence harvesting and livelihood activities, including Herschel Island Territorial Park (a popular cruise ship and pleasure craft destination), are located in Mackenzie Bay, in the Northwest Passage – exactly where ship traffic has increased. Given community members’ concerns about this attention and growth, and its implications for the ecology, environment, and Inuit way of life, the perspectives of Aklavik community members and all communities, should be a fundamental consideration during the implementation and management of low impact shipping corridors. The consequences of a marine incident would have deep, lasting, and potentially irreversible ecological, environmental, and cultural impacts. Combining scientific and Inuit knowledge will provide the most effective approach for pro-active vessel management through a corridors approach. Infusing Inuit and northerners’ voices in the continued development of low impact shipping corridors is critical to ensuring safe marine transportation near Aklavik and throughout the Canadian Arctic.
