INFORMATION TO USERS

This manuscript has been reproduced from the microfilm master. UMI films the text directly from the original or copy submitted. Thus, some thesis and dissertation copies are in typewriter face, while others may be from any type of computer printer.

The quality of this reproduction is dependent upon the quality of the copy submitted. Broken or indistinct print, colored or poor quality illustrations and photographs, print bleedthrough, substandard margins, and improper alignment can adversely affect reproduction.

In the unlikely event that the author did not send UMI a complete manuscript and there are missing pages, these will be noted. Also, if unauthorized copyright material had to be removed, a note will indicate the deletion.

Oversize materials (e.g., maps, drawings, charts) are reproduced by sectioning the original, beginning at the upper left-hand corner and continuing from left to right in equal sections with small overlaps. Each original is also photographed in one exposure and is included in reduced form at the back of the book.

Photographs included in the original manuscript have been reproduced xerographically in this copy. Higher quality 6” x 9” black and white photographic prints are available for any photographs or illustrations appearing in this copy for an additional charge. Contact UMI directly to order.

Verse-Scraps on Attic Containers and the Practice of the σκάλιαν
The Material Evidence in its Literary Context

by Peter John Anderson
M.A. Thesis, Classical Studies
University of Ottawa.

Abstract:

The symposion is the most frequently represented artistic theme on Attic red-figure containers of the Archaic period. Within this fundamental theme lie several sub-themes, many of which we know from literary sources — of this period and later — to have been the defining activities of the symposion: wine, entertainment (dancing, music and song), conversation and last, but certainly not least, sex. One activity in particular portrayed on these containers is the singing of a poem, a practice which soon came to be known as singing the σκάλιαν, or ἡ παροίνα ὑδῆ, a term which, it is argued, we can properly extend back to the Archaic period. These visual representations of sympotic singing offer a valuable record of the public performance of poetry in Archaic Greece, and offer a glimpse into the mechanics of the practice of the σκάλιαν. A small group of containers (numbering about fourteen) also record the song itself — at least in part — by means of dipinto (or once, incised) inscriptions; some of these verse-scraps have been paralleled to surviving poetry of the period. This thesis catalogues and examines these containers and their inscriptions as evidence, after examining in detail the surviving literary record, for the practice of the σκάλιαν. Original solutions for previously misunderstood verse-scraps are proposed and two containers preserving verse-scraps are identified for the first time as records of σκαλία.

It is concluded that, while this small group of containers cannot be entirely representative of the total body of surviving material evidence for the practice of the σκάλιαν, there are striking parallels between the artistic and literary records which call for attention of a wider scope.
χαίρω δ’ εὖ πίνων καὶ ὑπ’ αἰώνων ἀκούων,
χαίρω δ’ εὐθείων κερατι λύρην ὀχέων.

Theognis, Elegies 533-34.

Acknowledgments

I wish to thank Dr. Martin Kilmer, who first turned my attention to
the preserved verse-scrap, and who by his example as a person, as a
doctor, and as a scholar offered me the opportunity to do my best.
Thanks also are due to Dr. E. Dickey for her many comments and
suggestions. I would also like to thank my readers, Dr. E. Bloedow
and Dr. I.C. Storey for their many comments. All of the above saved
me from many mistakes and embarrassments: I accept full
responsibility for those which remain. Above all I wish to thank my
wife Lisann Gurney Anderson for her deep love, understanding and
support, as well as many tedious hours of proofreading. This effort is
dedicated to her, and to our son Christopher John, who make
everything worthwhile.

***

A Note to the Reader

The material evidence preserved on the Attic containers falls
chronologically between the mid-6th and the mid-5th centuries, taken
from the red-figured Pioneers and their followers, who are otherwise
known for their longer inscriptions. All verse-scrap accepted as
skolia are from vases in the red-figured style. Following accepted
convention, these containers are designated as Archaic; this is, of
course, a reference to style, not to the generally recognized period
dates. In any case, the dating of the material evidence is in many
cases merely an educated guess. I have followed Boardman’s floruit
dates for the individual artists. These may be found in the “List of
Vases”. In addition, the material evidence is presented in
chronological order (as far as can be determined). References to Sir
J.D. Beazley’s reference works (ABV, ARV², Para. Add) as well as
other important works, for each vase may be found in situ, or in the
“List of Vases”.

Verse-Scraps on Attic Containers and the Practice of the σκόλιον: The Material Evidence in its Literary Context

Peter J. Anderson

The *symposion* is the most frequently represented scene on Attic black- and red-figured containers of the Archaic period. Within this fundamental artistic theme stand several sub-themes, some of which we know from literary sources to have been the defining activities of the *symposion*: conversation, entertainment (dancing, music and song), wine and last, but certainly not least, sex. One activity in particular represented on these containers is the singing of the *skolion*. A symposiast, sometimes accompanied by an *aulos*-player, or by himself on the lyre, sings out a snatch of song. A group of containers also record the song, at least in part, by means of *dipinto* (or, once, incised) inscriptions; some of these verse-scrapes have been paralleled to extant sympotic poetry of the period.

The scarce remains of Archaic poetry record only one aspect of the expression of that poetry: the text. But the full expression of poetry, arguably in any period but most especially in Archaic Athens, lies beyond the actual words: the performance of poetry in Athens also included singing and often instrumental accompaniment. As Thomas recently wrote, “Uncovering the circumstances of a poetic performance, which become obscured by the written texts alone, is not easy. But as Gentili has reminded us, earlier Greek poetry was designed for a specific occasion or type of occasion and a specific audience.”¹ One such occasion of the performance of poetry was at the *symposion*: it is named in later sources as τὰ σκόλια.
Reizenstein's study remains the most complete and comprehensive study concerning the literary evidence for the *skolia*, although he considered the *skolion* a genre separate from elegy. Since that time, scholars have relied in large part on Reizenstein's work, and on the explanations of the practice found in the ancient sources. Interest in the practice has centred almost exclusively around the Attic *skolia* preserved in Athenaios XV.694, around the literary remnants of other *skolia*, or around the etymology of the term. Severyns, for example, explored the etymology of the term in connection with his work on Proclus' *Chrestomathy*, remarking in passing on the mechanics of the practice only as a source for the etymology. Harvey treated the practice in a similar fashion while placing the so-called "genre" of the *skolion* in its literary context. Admittedly, however, his focus was restricted to an examination of the Alexandrian terms for Greek poetry. It will become clear in this thesis that the term was much broader in scope in earlier times. Aly's article in *RE* attempts to explain the practice, again based exclusively on the literary record. Lambin's recent book (1992) does go into some detail regarding the sources for the practice, but fails both to recognize the possibility of an evolution of the practice and to examine the material evidence. In recent times, interest in the etymology of the term has once more been revived — principally by Teodorsson (1989) and Lambin (1993) — and once more the information for the mechanics of the practice provided by the ancient etymologists becomes central to the arguments for the origin of the term, which invariably remain inconclusive. Smyth's short explanation (1963) is the most concise and reasoned examination of the evidence for the practice from the literary sources, but necessarily glosses over the inconsistencies in the ancient sources. The purpose of the present study is to go one step further, and begin the process of examining the material evidence in the context of the literary evidence.
The individual pieces of the material evidence, for the most part, were examined earlier by Hartwig (1893), as well as by Beazley in a series of articles in *AJA* entitled "Some Inscriptions on Vases" dating from 1927 to 1960. Other authors have taken a passing interest in the individual pieces due to their remarkable inscriptions. Herzog (1912) included a brief discussion of the individual inscriptions for the more well known or recognized verse-scrap. In 1991 Csapo & Miller attempted to compile a list of these containers and their verse-scrap, but such a list can never be altogether complete, and theirs was included only as an appendix to the article. Indeed, this thesis does not itself pretend to be a complete collection. It is to my knowledge, however, the only study which catalogues and discusses these containers in their proper literary and social contexts. In addition, I have raised further possible examples of containers representing sympotic singing, in particular the tondo scene by Epiktetos in Malibu (pp. 47-53, fig. 4.1).

This thesis is an attempt to clarify the circumstances of the performance of the *skolion* in Archaic Athens through an evaluation of both the literary sources, in particular those which use the term *skolion*, and of the artistic record preserved on some containers. Due to the limited scope of the thesis, I have restricted the artistic evidence to those containers which also preserve verse-scarp inscriptions in an effort to evaluate and compare not only the mode of performance but also, as far as possible, the nature of the poetry performed. In this thesis I will evaluate and discuss the literary evidence for the practice of the *skolion*. I will also catalogue all instances of containers preserving verse-scarp inscriptions which can be classified as *skolia* on Attic black- and red-figured containers of the Archaic and Early Classical periods (c. 600-450 B.C.). In addition to cataloguing these instances, I will examine and discuss the inscriptions and scenes in detail with reference to their literary, social and artistic contexts. In general, I will consider a verse-scarp inscription a *skolion* if it is in a sympotic context — in regards to scene — and if the inscription is
closely associated with a singing figure on the container. It may be necessary, however, to include verse-slap inscriptions which, although not connected directly to a symctic context, nevertheless seem to record a skolion fragment.

**The Literary Evidence**

The practice of singing at symposia is represented in different levels of detail in several types of ancient sources. Most sources are removed in time from the Archaic period, but should not be disregarded on this account since there is nevertheless a shared cultural relevance which is not limited to chronological segments defined at a much later time. Time does, however, often witness the evolution of social practices (with the possible exception of religious/ritual practices); later sources must be treated with sufficient critical thought.

The poetic sources, valuable because they not only provide a glimpse of the practice but also provide evidence of the poetry itself, are in some ways more difficult to interpret; they provide a moment — a snap-shot — of the event, but often neither a chronological sequence nor the full event. They do, however, offer evidence of the sort not easily extracted from the descriptive sources: quite often there is mention of instruments used, or the manner in which the singing was accomplished (i.e. suntona = high-pitched). Descriptive sources are often the most helpful in determining a sequence of events, since they usually represent, by nature, a chronological sequence. The descriptive sources, however, like the poetic sources, were written for readers with a shared historical and cultural background and, accordingly, often omit information which would be helpful for social historians today. Some of the limitations inherent in descriptive sources will become more apparent in the discussion surrounding the etymologists below. Other descriptive sources

---

2 The term is adopted from Frye (1991). Cf. his discussion in Chapter One “Sequence and Mode”.
might more properly be called narrative, since they describe a group of events, or situations, historical or otherwise; they were not, however, written in order to describe or explain the practice of singing at the symposion. Even so, these sources offer a glimpse into the cultural life of ancient Greece and, although they are removed in time, some of them substantially, from the Archaic period, do contain valuable information. The literary sources discussed below are arranged according to the two types mentioned above; the discussion is intended to be not comprehensive, but representative. Some sources, because of the information provided, will be discussed individually. It has proved more expedient to group others and to discuss them collectively.

Singing at banquets was a tradition in Greece even from our earliest literary record. Homer includes several scenes of singing at banquets, although these could not properly be called symposia since eating and drinking took place at the same time. Nevertheless, they do exhibit some of the same character as later symposia. The most appropriate example in the Iliad is at the end of the first book (I.601-604), where Apollon and the Mousai amuse the gods with song at their dinner. The amoebaean nature of the singing may, as Barker notes, be a distant ancestor of the singing described in the Hymn to Hermes mentioned below (p. 12, note 26) in connection with “capping”, but alternately it may simply mean that the voices of the Musai answer (i.e. echo) Apollon’s lyre.3 The heroes, too, are often represented as musicians; but Barker writes, “musical prowess, though recognized as a genuine skill ..., is one that may conflict with the character expected of a warrior. Paris in particular is depicted as a little too elegant and sophisticated for war ... The true place of music, in the world of the heroes, is at the relaxation of a banquet ...”4 The Odyssey also has two passages which describe singing at a banquet; one describes the

3 Barker (1984), 24, n. 17.
Suitors' banquet at Book I.150ff, the other the banquet given by the Phaeacians for Odysseus at Book VIII.40ff. Both involve musicians (αοιδί).⁵

The remains of Archaic poetry, pitifully sparse in many ways, do preserve glimpses into the performance of music at symposia. Many of these references are found in Theognis' Elegies, and the works of the Melic poets.⁶ The most representative group, as far as description of music at the banquet is concerned, is the Theognidean Elegies. As West points out, "Both the pipes and the lyre are mentioned as concomitants of the symposium, but where the elegist refers directly to his own musical accompaniment, it is provided by a piper (Th. 941, 943, 1056)."⁷ In fact both aulos and lyre are mentioned (cf. Theogn. 533-34). Pleasure and praise are the themes which are most directly connected to music in Theognis; solo singing with musical accompaniment is predominant. Archaic poetry provides many clues as to the nature of performance, but is frequently obscure in terms of details.

The narrative sources of the fifth and fourth centuries B.C. also offer information concerning music at the banquet. The tragedians often refer to banquet music,⁸ although there are also many examples of reference made to other types of music.⁹ Banquet music in the tragedians is unequivocally associated with gaiety and joy, and often includes mention of the instruments used (barbitos, aulos), as well as the accoutrements of the banquet (garlands, musicians, wine). There

---

⁵ Book I.150ff: Phemios who is described at Book XXII.331 as ἀοιδός; Book VIII.40ff: Demodokos, described at I.43 as θείον ἀοιδόν.
⁷ West (1974), 12.
⁹ Barker (1984), 62-92 whence also the references to banquet music.
are no examples of the music sung at the banquets, however, and, as so often with the narrative literary sources, the modern reader is left with oblique references to a practice well understood by the ancient audience for which they were written.

The comedies of the late fifth and fourth centuries are much more informative and will, in large part, be examined below in connection with their scholia. But the important changes in the composition and performance of music which had come about by that time must be taken into account (see discussion below). Other narrative literature, too, can be informative in its own way, although the inevitable gaps in our knowledge of the cultural environment permit only an imperfect understanding. For example, in Xenophon’s *Symposion* (VII. 1), Socrates forestalls a developing argument by leading the symposiasts in a song:

\[
\text{θ}ορίζων \ \text{δὲ} \ \overset{ό}{\text{ν}}\text{τος} \ \overset{ο}{\text{Σωκράτης}} \ \overset{αδ}{\text{π}}\text{άλλων} \ \overset{επεν}{\text{τ}}. \ \overset{ο}{\text{Ανα}} \ \overset{επειδὴ}{\text{πάντες}} \ \overset{επιθυμοῦμεν}{\text{λέγει}}, \ \overset{νῦν}{\text{αν}} \ \overset{μάλιστα}{\text{καὶ}} \ \overset{αμα}{\text{διαμεμη}}; \ \overset{καὶ}{\text{εὕριξε}} \ \overset{τοῦτ’}{\text{εἰπὼν} \ \overset{ξορεύον} {\text{φωνής}}, \ \overset{επεί}{\text{δ’}} \ \overset{ζησων}{\text{...}}.
\]

As a brouhaha arose Socrates immediately said, “Since we all desire to speak, shall we now rather also sing together?” And after speaking these words, he straightaway began a song. Then they sang ...

At the beginning of this particular *symposion*, the guests had poured a libation and sung the paian.\(^\text{10}\) Several facts can be gleaned from this passage: 1) the song (φώνη) was sung by all; 2) it was sung at the suggestion of a symposiast who was not the *symposiarch* or the host, but who nevertheless held a certain authority; 3) it must have been a song all knew. We might also consider it possible that some types of song were used as a kind of time-out, if needed, and perhaps that once such a song was suggested it was obligatory for all to join in.\(^\text{11}\) Little else is confirmed

---

\(^{10}\) X. *Smp.* 2.1. Pl. *Smp.* contains no mention of singing, since the musicians were sent away.

\(^{11}\) cf. Thgn. 1055: Ἀλλὰ λόγον μὲν τοῦτον ἐλάσσομεν, αὐτὰρ ἐμοὶ σὺ || αἴλει, καὶ Μουσῶν μνηστόμεθ' ἄμφοτεροι.
by the passage, however, neither in terms of thematic material, instruments used (if any) or the length of the song, nor in terms of melodic composition or song structure (or indeed, genre).

A detailed examination of all the evidence referring to music at the banquet/symposion would be out of the question; the most important sources — the descriptive passages of the etymologists and the narrative of the comic writers — which use the term σκόλιον will be examined carefully. This brief, and necessarily superficial, survey of other literary references outlines the important position of music among the activities of the symposion.

**Ancient Testimonia**

It is certain that poetry of many different metres was composed to be sung at symposia; it is equally certain that, from its earliest appearance, the term skolion described a poem sung at a symposion. It follows that the former songs — whether in the dactylic hexameter of the elegy, or in any other metre of the extant sympotic poetry — could bear the general designation skolion,\(^{12}\) as well as a designation dependent on some other criteria (such as metre). It seems to me that to justify these observations, I will need to show the following two statements to be true: first, that from its earliest use the word skolion meant a song which was performed at (and possibly composed for performance at) the symposion; second, that it did not indicate one particular metre.

---

\(^{12}\) Smyth (1963), civ draws the same conclusion; see also West (1987), 42. n. 6.
The earliest record of the word is found in a fragmentary poem by Pindar (Turyn 130, ll. 1-15), which is placed by Turyn with the fragmentary 

encomia, but which van Groningen rightly
calls a skolion\textsuperscript{13}.

Young women, hostesses to many, handmaidens
of Attraction in wealthy Corinth,
who burn the golden tears of fresh frankincense,
Often you soar in your thoughts
To Aphrodite in the sky,
the mother of loves.
She gave to you, girls, without blame
to pick the fruit of soft\textsuperscript{15} youth
in beds of desire.
With compulsion all is fair . . . . (1-9)

\textsuperscript{13} Van Groningen (1960a), 37. Van Groningen's \textit{Pindare au banquet} is a critical commentary on Pindar's \textit{skolia}. Although Turyn placed this poem with the \textit{encomia}, he did recognize that this is a \textit{skolion} (1952), 327: “Carmen, ab ipso Pindaro (cf. v. 11) et Atheneo \textit{skolion} appellatum, ...”

\textsuperscript{14} Text, strophe division and numbering taken from Van Groningen (1960a), 21-22. Translation taken from Bowra (1964), 388-90.

\textsuperscript{15} Cf. Catullus 80 where \textit{mollis} is used in a similar way. Perhaps here also the image of a “softness” is meant to convey an image of sensuousness and sexuality, although hopefully in kinder spirit here than in Catullus. \textit{μαλβακάς} in comedy, especially when used of men, very often has negative connotations.
But I wonder what the masters of the Isthmus
Will say of me, who have found
Such a start to a honey-hearted [skolion]
To consort with consorting women. (13-15)

This poem was written for Xenophon of Corinth, who was also praised by Pindar on the occasion of his Olympic victories (Ol. 13) in the stade and the pentathlon in 442 B.C.; it must then date from soon after this victory, since the festivities described were organized as part of a vow in return for success. An excerpt from the Περὶ Πηδάρου of Chamaileon of Herakleon, who wrote at the end of the fourth and early third centuries B.C., recorded by Athenaios explains further the context of this poem. It describes a vow being discharged by Xenophon to Aphrodite in return for his victory at the games, and was sung at the banquet which followed the sacrifices, both of which were a part of this vow. Van Gronigen outlines the action in this way:

la fête a compris deux parties, d’abord la partie strictement religieuse des actions de grâces et des sacrifices, à laquelle les femmes ont pris part en qualité d’hierodules; ensuite une partie mondaine, comportant repas et beuverie, au cours de laquelle les hierodules sont transformées en hétaires. C’est dans cette seconde moitié que le socré est à sa place.

---

16 For reasons of space, I will only provide the small part relevant to the skolion in particular: ἕτερον δὲ καὶ σκόλιον τὸ παρὰ τὴν θυσίαν ἔφθασεν, ἐν ὦ τῆς ἀρχῆς εὐθέως πεποίηται πρὸς τὰς ἑταίρας, αἱ παραγενομέναι τοῦ Ξενοφώντος καὶ θύμων τῆς Ἀφροδίτης συνέθεσαν. Διότι ἦδη Ἡρακλείῳ ὁ Αριστοτέλης. Οἱ Χέρμιοι δὲ οὐ κατὰ τοῦ μέλους. “Afterwards he even sang a skolion immediately after the sacrifice, in which he addressed the very beginning to the hetairai, who — when Xenophon was presented and the sacrifice complete — made covenant with Aphrodite. Then he spoke. Thus he began his song.”

17 Van Groningen (1960a), 21.
In this context, then, the word designates a banquet song (albeit at an atypical banquet), written for a "friend" and sung solo. Its thematic material is familiar and uncomplicated, but specific to the occasion, while its tone is suitably light. Its metrical schema follows the pattern:

\[
\begin{align*}
1 & \quad \overline{\hline} \quad \hline \\
2 & \quad \overline{\hline} \\
3 & \quad \overline{\hline} \\
4 & \quad \overline{\hline} \\
5 & \quad \overline{\hline} \\
\end{align*}
\]

The next occurrences of the word are found in the comedies. In Anaxandrides 17.1-6 (Kock) the parasitos pokes fun at a skolion recently sung by another guest; from the description of the skolion we know that it is one of the so-called Attic Skolia recorded in Athenaios XV.694C ff. The fragment is from the play Treasure:

\[
\begin{align*}
\text{ΠΑΡΑΣΙΤΟΣ(?) & ò το σκόλιον εύρων ἐκείνος ὡστις ἦν} \\
& τὸ μὲν ἵγιανεν πρῶτον ὡς ἄριστον ἦν \\
& ὁ ἑιδίμανεν ἁρῆκεν, δεύτερον δὲ εἶναι καλὸν, \\
& τρίτον δὲ πλουσίων, τοῦτο ἁρῆκε, ἐμαίνησον. \\
& μετὰ τὴν ἱγιασάς γάρ τὸ πλουσίων διαφέρει, \\
& (ὁ) καλὸς δὲ πεινῶν ἐστὶν αἰσχρῶν θηρίων. \\
\end{align*}
\]

PARASITOS: The one who composed this skolion, whoever he was, rightly put sound health as the first good thing, but to be handsome second, and rich third, in this you see, he was mad!

For wealth comes after health, but the handsome man, hungry, is a disgraceful beast.

---

18 There seems to be debate concerning whether Pindar and Xenophon were friends at this point. Norwood claims that Pindar did not like Xenophon on the basis of Ol. 13 and this poem (Norwood, 1945, 20); Van Groningen (1960a, 49) questions his conclusions.

19 see n. 6 above.

20 PMG 890; Page lists it as no. 7 of his Carmina convivialia: ἵγιανεν μὲν ἄριστον ἄνδρι θηρίων, δεύτερον δὲ καλὸν φῶν γενεῖται, τὸ τρίτον δὲ πλουσίων ἁρῆκεν, καὶ τὸ τέταρτον ἡδίνην μετὰ τῶν ἄνδρων. "To be healthy is best for mortal men, second to have a beautiful nature, third to be rich and honest and fourth to be young with his friends." It is interesting that the fourth item is not mentioned by the parasitos. It may not have been part of the skolion as Anaxandrides knew it. (Or perhaps the parasitos had no friends and didn't want to call attention to the fact!)
Again, this passage takes place at a banquet, apparently a private symposion. The speaker of the passage is poking fun at the order of blessings listed by the composer of the skolion. The tone of this skolion is also light, despite its gnomic theme.

Platon (Comicus) mentions the skolion as something sung at a symposion in frag. 71 (PCG); this, too, is preserved by quotation in Athenaios. Dates c. 410 B.C. have been suggested for the passage\textsuperscript{21}, which is part of a discussion between two servants:

\begin{quote}
TA. σπερνὴ μὲν ἔνας γένοει, καὶ πίνοντες εἰς πόρρω, καὶ σκάλιον ὕμνος, κότταβος δ᾿ ἐξεῖχεται θύραξ.
αὐλοῖς δ᾿ ἔχουσά τις καρυκάθι καρυκάθι μέλος (τι)
μελέτας τούς συμπόσιας, κάλλιτερ τῶν γίγανον ἐδου
ἔχουσαν, ἢ δ᾿ ἤδειν πρὸς αὐτῷ μέλος Ἰώνικον τι.

TA. The libation has already past, and the drinking is far gone, and the skolion sung; the kottabos apparatus has been taken out.

Some little chit’s got the auloi and is playing a Karian dirge\textsuperscript{22} for the symposiasts, and I saw another with the trigonon\textsuperscript{23}. she sang some Ionian song to it.

The skolion in this passage seems to refer to a song sung by the symposiasts themselves, rather than the (paid?) entertainers/hetairai.\textsuperscript{24} No other indication of the manner of performance is given.

The word σκάλιον is found in five of Aristophanes’ comedies.\textsuperscript{25} The scholia on these passages offer much more information than the passages themselves, but because of the nature of

---

\textsuperscript{21} Geissler: 410-400 B.C.; Giannini:410-405 B.C.

\textsuperscript{22} The Karian μουροῦ was a kind of funeral song. It hardly seems appropriate at a banquet, but perhaps it is part of the joke (i.e. it was a really slow party and needed to end — or get pumped up — or perhaps a really good party, and the aulos-player is anticipating how they will feel in the morning).

\textsuperscript{23} A type of percussion instrument like the modern triangle.

\textsuperscript{24} The first two lines mention four activities: the libation, drinking, the skolion and the kottabos-game; the rest of the lines describe the actions of two female entertainers (they seem to be distinguished from the symposiasts in line 13: μελέτας τούς συμπόσιας).

\textsuperscript{25} Another passage (N. 1365) and its important scholium are discussed below. The word skolion is not used there, although the passage is clearly talking about the practice.
that information they are discussed below with the etymological sources. While the word does appear in Ach. 532, Av. 1416 and Ra. 1302, no real information is given; the passages from the two other comedies, however, provide some of the key evidence for the practice, at least as it was at the time of Aristophanes. First is a passage from V. 1222-40, c. 422 B.C., which is the main source for the practice of “capping” which several of the etymologists seem to describe (see below pp. 30-31), and which inspired the scholiast on this passage to offer an etymology of σκόλιον from (ἄ)σκολιός = difficult (because “capping” was considered by the scholiast to be difficult). This “capping” was done by finishing a skolion which another had started, presumably, in keeping with the agonistic nature of Greek society, with a contribution superior to that of the previous participants. The passage is quite long, and due to space, it may be better simply to describe the action. Bdelykleon is attempting to teach his father Philokleon how to act at an “upperclass” symposion and how to take part in the “capping” of a skolion. Philokleon clearly has other ideas on how to take his fun, and instead of finishing the verses “properly”, he finishes them with coarse verses and ribald comments.26 In addition to the practice of capping, this passage also records examples of skolia sung, in quotation as well as by allusion, some of which were obviously well-known, and perhaps over-used.27 The second passage, just one line, is from a fragment of a comedy (fr. 235 K-A) placed by Kassel-Austin — following Athenaios — in Daitales:

ὤςον δὴ μοι σκόλιον τι λάβων Ἀλκαίον κώμακραντεσ
Then sing for me a skolion taking something from Alkaios or
Anakreon.

26 This does not seem to be an unusual practice: Barker (1984), 43 refers us to Hymn to Hermes 55-6, Ar. Lys. 1236-38 and Theoc. 5.80 ff which describes a singing contest of one-upmanship between Komatas and Lakon; for a similar example c.f. Theoc. 6. For an example of a singing challenge in the archaic period, cf. Thgn. 993-96.
27 Over-used cf. Ar. Nu. 1364.
This fragment shows only that the poems of two Archaic poets were sung as skolia at symposia in the time of Aristophanes.

Aristoteles mentions famous skolia in his Politics and others are cited in the pseudo-Aristotelian Athenian Constitution. In their context, however, they give no indication of the practice, but only the thematic material, which is decidedly political and democratic. This should come as no surprise given the subject matter of the two works.

The famous skolia which Aristoteles mentions are part of the collection of “Attic Skolia” preserved in Athenaios XV.694 ff. Of course, not all of the songs sung as skolia are recorded here, a point which van der Valk is quick to make, since we know of others from comedy, as well as from the Attic containers and other sources. The “political” skolia, which probably date, based on internal evidence, from the early 5th century B.C., have received much attention. Of the other skolia, however, seven have no distinguishing internal information which can be used to date them securely. These could be as late as Athenaios himself, although he certainly believes them to be of ancient origin. Two of the “skolia” have been attributed to Simonides and Alkaios, both of whom wrote in the late sixth and early fifth centuries. Reitzenstein showed that this collection

28 Cf. the scholiion on Ar. Nu. 1364 where Simonides and Stesichoros are mentioned.
29 Daitales is a lost play by Aristophanes, which won 2nd prize in 427 BC. The title seems to refer to a group of diners in honor of Herakles (I.C. Storey, pers comm.), and so I believe we can assume a sympotic context for the fragment.
30 Arist. Pol. 1285.a.37; Alc. fr. 160 which refers to the elected tyranny of Pittacus.
31 Ps.-Arist. Ath. Pol. 19.3.8 which bemoans the loss of good democrats at Lipsydriion; 20.5.3 which praises the anti-tyrant activities of Kedon. The frequent political tone of the Attic Skolia, as well as other skolia, has long been noted.
33 Ostwald (1969), 126-7 and especially 127, n. 1 in which Ostwald follows Bowra (1961), 374-375 in dating these skolia “closer to the time of Marathon and Salamis”.
34 Ath. Diipn. XV.693f: ἅπαξ [skolia] καὶ αὐτὰ ἄξιον ἔστι σοι ἀποκαλύπτειν διά τε τὴν ἄρχοντα καὶ ἀφέλειαν τῶν πολιτῶν ...
35 Ostwald (1969), 127.
was probably compiled about 450 B.C. as a sort of songbook based on the observation that Pindar
influenced and Praxilla was influenced by songs contained in it;\textsuperscript{36} Lesky dates the collection,
slightly earlier, to the late sixth and early fifth century B.C., but does not justify this conclusion in
any way.\textsuperscript{37} But it was Bowra in \textit{Greek Lyric Poetry}\textsuperscript{2} who showed that the collection was probably
compiled closer to the time of Marathon and Salamis, with the victory at Salamis providing a
\textit{terminus ante quem}.\textsuperscript{38} Most of these twenty-five poems are short (2-4 lines) and vary in subject
matter. Lyric metres and elegiacs are present. Giangrande outlines several motifs, beyond those of
political significance, expressed by the collection in Athenaios\textsuperscript{39}: 1) exhortations to drink (or eat)
and be merry; 2) expression of a wish, introduced by the formula \textit{eîde}; 3) couplets with a point.
Van der Valk has a far more satisfactory division based on the order of the poems themselves:\textsuperscript{40} 1)
praise for the gods (1-4); 2) human affairs (5-9); 3) praise for heroes of the past (10-16); 4)
erotic themes (17-22). At this point, however, van der Valk’s orderly division breaks down
somewhat; 22-24 are placed together as \textit{skolia} which celebrate \textit{ἀγάθοι ἀνδρεῖς} and 25 praises the
\textit{εὐρισκόμενοι}. Neither of the divisions proposed by Giangrande and van der Valk seems to be intended to
match — nor do they — the divisions of performance shown by our etymological sources, since
they deal exclusively with the \textit{skolia} preserved in Athenaios XV. 694 ff.

The etymologists form the next, and the most informative, group of sources. Before
discussing them, however, it might be useful to summarize the conclusions so far. From its earliest
preserved use (442 BC) the word \textit{skolion} designates a song which is sung at a \textit{symposion}; this

\textsuperscript{36} Reitzenstein (1893), 13-24. But surely a poem would begin its existence before being included in a
songbook of famous \textit{skolia} (it had to be ‘not famous’ at some point), and could influence others as it
became a single famous poem.
\textsuperscript{37} Lesky (1957), 174.
\textsuperscript{38} Bowra (1961), 375-97.
\textsuperscript{39} Giangrande (1967), 104-6.
\textsuperscript{40} Van der Valk (1974), 2-18.
song was sung by symposiasts, probably solo, and could take up many different themes. In addition to singing a complete poem, a symposiast might challenge another to finish a song — the “capping” mentioned in Aristophanes’ *Wasps* 1222-40. Clearly, there were famous *skolia* from which a guest might choose to perform; on the other hand, composition for a particular *symposion* was not out of the question if a guest were accomplished; no particular metre is consistently associated with the term. The word, then, appears to be simply a general designation for any song sung at a *symposion* by symposiasts. Discussing the frequently imprecise terminology of Archaic poetry, and the *skolion* in particular, van Gronigen writes, “Il est impossible de réduire en un système strict des appellations aux limites toujours flottantes. Tout ce qu’on peut affirmer c’est qu’une chanson ou une ode exécutée à un banquet est assez souvent appelée scolie, et que le contenu est tout aussi différencié que l’était la conversation.”\(^{41}\) The use of the term in literature before the etymologists — literature closest to the Archaic period — points toward a general meaning for the term: a *skolion* could designate any kind of song sung at a *symposion*; the term was not limited to any one specific metre.

Ancient Etymologies and Explanations

The earliest extant ancient etymologies, by Dikaiarchos of Messana and Aristozenos of Miletus, both of whom wrote in the fourth century B.C., form the core information of the later ancient etymologies and explanations of Artemon *apud* Athenaios, Plutarchos and other writers in addition to the descriptions of the practice by certain modern scholars.\(^{42}\) For this reason, it seems most appropriate to begin with the most ancient passages, also the closest in time to our period of

---

\(^{41}\) Van Groningen (1960a), 14-15.

\(^{42}\) Cf. for example Harvey (1955), 162-163; Smyth (1963), civ; et al.; also Lambin’s general discussion (1992), 219-222 and his recent article (1993), 32-37.
study, and from there to move on to the more recent authors, especially since most of the later authors, ancient and modern, tend to combine the earliest etymologies to form their explanations. Information provided by these early etymologies and explanations, coloured of course by the authors’ historical contexts and those of their sources, will be valuable when considered with the literary testimonia to the term skolion found in Archaic poetry and other genres, notably the comedy of Aristophanes, and the allusions to singing at the symposion in extant sympotic poetry, both of which were discussed above.

The exact etymology of the term σκόλιον is far from certain, and this discussion of the ancient etymologies is not an attempt to correct the situation. These ancient discussions do contain useful information, however, and are in this respect important for the reconstruction of the practice. First, however, a caveat. The most ancient etymologies, and thus to a certain extent the later explanations — due to their reliance on the earlier — are largely, of course, an effort to determine the origin and proper meaning of the term σκόλιον rather than an attempt to explain a practice. For this reason, it is probable that only those elements of the practice, as the writers

---

43 Most recently Lambin (1993) and Teodorsson (1989). See also Reitzenstein (1893) pp. 1-44, still the most complete study published on the skolion, although he considers it a genre separate from elegy; W. Aly RE s.v. σκόλιον, col. 561; A. Severyns (1934) pp. 837-841. Lambin’s 1984 doctoral dissertation, unpublished, from l’Université de Lille (485 pp.) was titled Les Chansons de banquet en Grèce antique. The most recent studies suggest that the term, since possible Greek origins are unsatisfactory, may be of Lydian origin (as are many other musical/poetic terms, cf. Teodorsson (1989), 132, n. 30). The couchèd banquet, id est a banquet for which the banqueters reclined on couches, certainly seems to have entered Greece in the 7th and 6th Centuries from the Greek east through contact with the Lydians (cf. J.-M. Dentzer, 1982.) Most early composers of skolia were of Ionic Greek origin (Terpander of Lesbos, Alceaus of Mytilene, Pythemos of Teos, Alcman of Sardis). The Lydians seem to have had a practice similar to the skolion, at least in the sense that singing took place at a drinking party directly after dinner (Lambin, 1993, 36, although he cites no authority). Pindar (Ps. Plutarchos, De la musique 28) names Terpander the inventor of the skolion, and also places him in the context of a Lydian banquet (fr. 129 Turyn) «ἐν δείπνοις Λυδίων ὑπολίμου ἀπειθήθη τοις ὑπερασπίζεται» “at the dinner-parties of Lydia he heard the imitating plucked notes of the high pectis”. But, as Lambin and Teodorsson both freely admit, we are likely never to verify this hypothesis since little of the Lydian language survives. (Lambin 1993, 37; Teodorsson 1989, 132)
knew it, which bear directly on a proposed etymology will be emphasized. Information which would be relevant to us in an attempt to reconstruct a social practice might well have been considered then to be extraneous and irrelevant, at least for the purpose of establishing the origin of a term. It is even possible that such information might have been considered a hindrance to the explanation, if it presented contradictions or ambiguities, and thus have been left out entirely.

Dikaiarchos of Messana was a prolific writer and a pupil of Aristoteles, working in the fourth century B.C.; his works survive in fragmentary condition, however, only in testimonia. Together with Aristoxenos’ (see below), his is the earliest extant discussion of the origin of the term and as such seems to form the basis for later discussions. He is extensively quoted by many ancient writers on a variety of subjects, but in particular by Cicero, who considered him an exemplar of the βίος πρακτικός (life of action), and contrasted Dikaiarchos with his own friend Theophrastos whom he thought an exemplar of the βίος θεωρητικός (contemplative life). The scope of his writings is broad and varied, from a philosophical treatise on the soul (Περί ψυχῆς) to works on divination and religious practice (Εἰς Τροφαιωνικοῦ καταβασίας, Περὶ τῆς ἐν Ἄληθείᾳ θυελής, Περὶ ἀνθρώπων θυρώδες) to history (Βίος Ἐλλάδος ἐν βιβλίοις, γ’), and many other genres besides. Interestingly, he seems to have written a biography of Alkaios, one of the most famous writers of skolia.

---

44 For example, the "crooked" (σκολιώς) course of the path of singing seen in most authors (see below).
45 Cic. Epist. ad Atticam II 16.3: nunc prorsus hoc statui, ut quoniam tanta controversia est Dicaearcho familiari tuo cum Theophrasto amico meo, ut ille tuus τῶν πρακτικῶν βίων longe omnibus anteponat, hic autem τῶν θεωρητικῶν, utrique a me mos gestus esse videatur.
More relevant to us is his Περὶ μουσικῶν ἀγώνων: his etymology of the term is found quoted from this work in the scholium on Plato's Gorgias 451E (whence Suda; Photios s.v. σκölion). F. Wehrli’s edition is the accepted text for Dikaiarchos’ writings:

σκολιαν' λέγεται ἡ παραίνεσις ὑδή, ὡς μὲν Δικαιάρχος ἐν τῷ περὶ μουσικῶν ἀγώνων, ἵνα πείρη γένη τις ὑδή, τὸ μὲν ὕπο πᾶσιν ἄδικον, τὸ δὲ καθ’ ἕνα ἐξη, τὸ δὲ ὕπο τῶν συνετιστάτων ὡς ἔτοιχε τῇ τάξει. ὁ δὲ καλεῖται διὰ τῶν τάξεων σκολιον.47

Skolion: so the drinking song is named, as Dikaiarchos [writes] in his Concerning Musical Contests, because there were three types of songs. One sung by all, one sung singly in sequence, and one sung by the most knowledgeable in random order. It is called skolion, then, because of the order.

Dikaiarchos outlines what appears to be a progression of types of skolia; this progression also appears to be temporal (the temporal aspect is taken up more clearly in Athenaios’ and Plutarchos’ transmission of Dikaiarchos — see below). This division is not as narrow and defined as Teodorsson seems to think.48 The division comprises three parts: 1) songs sung by the group together, 2) songs sung by each member of the group in turn, 3) songs sung by the most knowledgeable (or skilled) in whatever order occurs. Teodorsson describes Dikaiarchos’ division as one which narrows the term skolion to the point at which it comprises “only those songs which a guest performed while accompanying himself with the lyre.”49 This is, however, manifestly not the case. Dikaiarchos clearly describes the skolion in terms of three classes; he does not narrow the definition in any way. In fact, removing Teodorsson’s incorrect attribution to Dikaiarchos himself

46 With minor alterations. The scholiast has omitted διὰ τῶν τάξεων and has ὁ δὴ; in any case this does not affect the sense of the passage. Wehrli has accepted the readings of Photios and Suda.
47 Wehrli (1944), 31, fr. 88.
48 Teodorsson (1989), 128.
49 Teodorsson (1989), 128. He has combined the three sources of Dikaiarchos’ information without examining each singly; unfortunately this has resulted in a fundamental error. Teodorsson has included the mention of the lyre as apparently the sole accompaniment for a συνετιστάτως in Dikaiarchos’ etymology.
of an addition by Plutarchos to Dikaiarchos’ etymology, the divisions could hardly be any wider, that is songs sung by all together and songs sung solo. The only combination omitted is songs sung by groups of two or more (but not all). The confusion arises, perhaps, from the fact that the last division, songs sung by the most talented, supposedly gave the practice its name. Dikaiarchos, however, states quite plainly that all three are skolia (πρια γένη ἰτυ ϕωιν). Finally, Dikaiarchos’ divisions reflect the purpose of this passage, which is to explain the etymology of the term skolion. It is apparent in the last division; the συνετῶτατοι sing ὡς ἔτιχε τῇ τάξει. The term skolion then (from σκολίος = crooked) arises from the “crooked” path of the singing (διὰ τὴν τάξιν).

The scholiast on Aristophanes’ Clouds 1364 (frag. 89, Wehrli) records additional information from Dikaiarchos, also from his lost work Περὶ μουσικῶν ἀγώνων:

Δικαίαρχος ἐν τῷ περὶ μουσικῶν ἀγώνων· ἐν δὲ καθὼς φαίνεται συνακαλουθέων τῷ διερχόμενῳ εἶτε μετὰ μέλος εἶτε ἀνευ μέλους, ἕκαστας τὶ ἐν τῇ χεὶρι ποιοῦσαι τῷ ἀφηρῆτην. οἶ τε γὰρ ἀδοκίς ἐν τοῖς συμποσίοις ἐκ παλαιᾶς τυχος παραδότως κλώνα δᾶφνης ἢ μυρίνης λαβάντες ἔμποιν.

Dikaiarchos in his Concerning Musical Contests: moreover, some common experience appears to arise for those recounting whether with music or without music, holding something in a hand to compose a narration. For those singing at symposia according to a certain ancient tradition sing holding a twig of laurel or myrtle.

---

50 Given the fact that all main sources for Dikaiarchos (Suda, Photios, Athenaios and Plutarchos) faithfully record the three divisions but that only one mentions the lyre, we should place much less emphasis on this piece of information. Furthermore, as I will show below, the aulos and the lyre both (although perhaps at different times and/or with different types of poetry) were used by the singers. Obviously, a συνετῶτατος could not accompany himself on the aulos, and would need an accompanist, as might also a symposiast singing to the lyre.

51 Wehrli (1944), 31-32, fr. 89.
Dikaiarchos knew of a performance tradition at the symposion in which a symposiast recounting to music, and also a symposiast who recounted something without music, held a twig of laurel or myrtle. The scholiast is explaining Strepsiades' request at a party which he is hosting that his son sing something with the lyre. By this time, judging from Pheidippides' response, singing at a symposion has fallen out of fashion with the younger generation, and Pheidippides' response is both scornful and, in keeping with his character, insolent. Instead of a song then, Strepsiades demands that Pheidippides recite some Aeschylus while holding a twig of myrtle. Even this is gauche for Pheidippides, and instead he recites some Euripides. While the use of the myrtle or laurel twig appears in other ancient etymologies expressly in connection with the etymology of the term skolion (see below), the scholiast of Platon Gorgias 451E did not include Dikaiarchos' comment from the same work, Πες μουσικῶν ἀγώνων, recorded in the scholium on Clouds 1364. There seem to me to be at least two possible reasons: the scholiast on Platon Gorgias 451E was concerned with the etymology in particular and so did not include information not directly relevant to his purpose; or the passage witnessed in the scholiast on Clouds 1364 does not refer to the skolion, and so was ignored by the scholiast on Platon.

The former reason is the more compelling and the latter clearly wrong given our understanding of the nature of the skolion. Although the first sentence surely refers to a practice involving recitation and myrtle or laurel twigs, and probably indicates that this practice takes place at a symposion, since it is quoted in reference to a symptic context in Aristophanes' Clouds, it is the second sentence which contains information directly relevant to singing at the symposion before the time of Dikairchos. It is this information which is most important: that there was an ancient

---

52 Wehrli (1944), 70, takes this to mean a rhapsodic performance (Indessen redet D. hier im allgemeinen von der Sitte, etwas in Händen zu halten, die sowohl für rhapsodischen wie gesungen Vortrag galt.), or as the passage on which the scholion comments indicates, "eine Rezitation aus Aischylos" (1944), 71.
tradition (ἐκ παλαιάς τινος παραδόσεως) according to which those singing\textsuperscript{53} at the symposion (Ἄδοντες ἐν συμποσίως) did so holding a myrtle or laurel shoot (κλώνα δάφνης ἤ μυρρίνης). The passage found in the scholiast on Aristophanes' Clouds does concern the singing of the skolion, but is not relevant to Dikaiarchos' etymology quoted in the scholiast on Plato Gorgias 451E; it was probably left out for that reason.

For Dikairachos, then, the skolion comprised three types of singing; it also involved, according to one ancient tradition, the use of myrtle or laurel twigs by the singers. Recitation might also occur at the symposion, but the period in which this occurred is not completely clear (but dates at least from the time of Aristophanes).

Aristoxenos, born at Tarentum, trained in music and then came to the Lyceum to study under Aristoteles. He seems to have been somewhat of a maverick, but talented: he is notorious for passing on scandalous anecdotes about Pythagoras (frag. 25). Aristoxenos' etymology is also found in the scholium on Plato's Gorgias 451E (=Suda; Photios s.v. σκόλιον), frag. 125 Wehrli; he indicates that the term derives from the crooked course of singing around the tables at wedding banquets:

σκολιῶν ... ὡς ἰ Αριστοτέλεα καὶ Φύλλων ὁ μουσικής, ὅτι ἐν τοῖς γάμοις περὶ μίαν τράπεζαν πολλάς κλώνας πεθέντες, παρά μέσως ἑξής μυρρίνας ἔχοντες γέλοιαν γνώμας καὶ ἑρωτικὰ σύμφονα. ἢ δὲ περίοδος σκολιά εὔνετο διὰ τὴν βεστίν τῶν κλώνων ἐπὶ ἀρχαίως παλαιώτατοι αὐτῶν, καὶ τῷ τῷ καὶ τὰς ἐπὶ αὐτῶς κατακλύσεις παραβίωσας γίνεσθαι. οὐ δὲ τὴν μελοποιίαν ὡσ, διὰ δὲ τὴν μυρρίνης σκολιῶν διάδοσιν ταῦτη καὶ τὰς ὑδας σκολιῶν καλεῖσθαι.

the skolion ... as [write] Aristoxenos and Phyllis the scholar, because at marriages, with many klinai drawn up around one table, they sang maxims and love-songs in high-pitched scales holding the myrtle twig

\textsuperscript{53} The passage can be understood in two ways: 1) both reciters and singers held something in their hand, and the singers held a twig, or 2) both reciters and singers held a twig while performing.
one after the other in order. The route was crooked because of the arrangement of the klinai around the polygonal rooms — both for this reason and because the celebrations themselves became crowded. The songs also were called σκαλάς not because of the mode of composition, but because of the crooked (σκαλών) passing on of the myrtle twig in this manner.

Making no mention of divisions by number of singers or by skill, as did Dikaiarchos, Aristoxenos mentions a division — of sorts — by type of song: they sang γνώμας καὶ ἐρωτικὰ σύντονα. Furthermore, they sang these holding the myrtle twigs (μυροίνες). The crooked path of the myrtle twig⁵⁴ as it wound its way around the many klinai in the overcrowded room is the characteristic of the practice which gives the term its name. For Aristoxenos the term has its origin in the context of a wedding banquet. The conditions placed by Aristoxenos on the practice derive, as also in the case of Dikaiarchos, from his purpose: to explain the origin of the term σκάλων as σκαλάς (crooked) because of the path of the singing. The overcrowding of the klinai is the main factor in the crooked path; this overcrowding finds its cause in the wedding banquet. This is a case, perhaps, as I alluded above, in which a writer selected information which would support his etymology or explanation and excluded or disguised information which might hinder it. Obviously the singing of the skolion took place at times other than the wedding banquet; the symposion and not the wedding banquet was the occasion for the skolion. The wedding banquet for Aristoxenos, however, explains the overcrowding, which in turn gives the term its name. The wedding banquet, therefore, becomes the exclusive venue for the “crooked” song. This condition is patently incorrect, since the skolion in every other source belongs to the symposion — whatever the occasion. If the wedding banquet involved a symposion-like aspect, the singing of the skolion may

---

⁵⁴ Or twigs. The first part of the passage has the plural μυροίνες while the key part mentions only one myrtle twig (μυροίνη). The first occurrence should probably be taken as mention of multiple occasions (i.e. twigs used one-at-a-time on many occasions) since many twigs in use at the same time would defeat the crooked path of the singing.
very well have been practiced; but it could not have been the only venue. Its name (for Aristoxenos) came from the path of the singing on the most distinctive occasion of its use.

Two pieces of information given, however, are not essential to this purpose. First, the guests sang, as I have already mentioned, ἡγομένων καὶ ἑρωτικὰ σύντονα. These themes (gnomic and erotic) were a large part of sympotic poetry (for example the elegiac poetry of the Theognidea which was certainly intended for the symposion\(^{55}\)). The second, and more important, piece of information is found in the recapitulation οὐ διὰ τὴν μελοποιῶν οὖν, διὰ δὲ τὴν μυρωθῆς σκολιάν διάδοσιν. The music for the song (μελοποιή) does not give the term its name. This information recurs in Athenaios and Plutarchos, as well as the other sources, and discussion arises in the later authors as to the composition of the melodies for skolia in addition to discussion of the skolia themselves.

The etymologies of both Dikaiarchos and Aristoxenos reflect their purpose: to explain the origin of the term skolion and, more accurately, to explain why it seems to derive from the adjective σκολιός. Both agree that it is the path of the (solo) singing which gives the term its name. While Dikaiarchos creates divisions based on the number of singers and how talented a singer might be, Aristoxenos does not create any divisions (unless one were to consider the gnomic and erotic songs a division by subject/theme). Moreover, Aristoxenos derives the name from the particularly convoluted path of the myrtle twig at a crowded wedding banquet, while Dikaiarchos makes no mention of contexts more specific than the symposion. Both mention the use of myrtle twigs by the singers; Dikaiarchos also mentions the use of laurel. Aristoxenos claims that the passage of the twig between singers gave the term its name because it rendered a crooked order of

singing; similarly Dikaiarchos, although he states only that it was the order of the singing and does not make reference to the use of myrtle or laurel in this manner. In the final analysis, the two do not share much common information, but they do admit a common conclusion — which reveals an important piece of information — concerning the origin of the term: the “crooked” (σκαλικός) order of the solo-singing.

Athenaios, writing in the 1st century A.D., preserves an important collection of skolia in his Deipnosophistai (XV.694c-696a), some clearly dating from the 6th century B.C. Many different lyric metres are represented, and several themes; these have been discussed, briefly, above. Athenaios’ explanation of the practice precedes this collection:

σκοίλια δὲ καλοῦνται οὐ κατὰ τῶν τῆς μελοποιίας τρίτων ὡς σκαλικὸς ὄντες — λέγουσι γὰρ τὰ ἐν ταῖς ἀνεκμέναις εἶχαν σκοίλια — ἀλλὰ τρὶῶν γενῶν ὄντων, ὡς φησιν Ἄρσενον ὁ Κασσανδρείας ἐν δεύτερῳ Βιβλίῳ Χρήσιμος, ἐν αὐτῷ τὰ πριν τὰς συνοισίας ἐμὲ ἴδομεν — ἀλλὰ τὸ μὲν πρῶτον ὃν ὃς ἡ πάντως ἴδοι τὸν νόμον ὃν, τὸ δὲ δεύτερον ὃς ἡ πάντως μὲν ἴδοι, οὐ μὴν ἀλλὰ γε κατὰ τὴν περίοδον ἐξ ὑποδοχῆς, τὸ τρίτον δὲ καὶ τὴν ἑτὶ πάπης τάξιν ἔχον, οὐ μετέχουσιν ὧν καίτοι πάντως, ἀλλὰ αἱ συνετοὶ δοκοῦσίν εἶναι μόνοι, καὶ καθ’ ὅτι τὸν τῶν ἑκατέρων ὄντων διότερος ἀπλύτως ἐπί τῶν μόνων παρὰ τάλλα ἔχουν τὸ μηθ’ ἡμᾶς μῆθ’ ἔξος γνώμην, ἀλλὰ ἢ ἢ ἢτόχων εἶχαν σκοίλιον ἐκλήθη. τὸ δὲ τοιαύτα πέρα ὡς τὰ κοινά καὶ πάπης ἀναγκαία τέλος λάνθη — ἐντοάθα γὰρ ἐξά τόν σοφῶν ἔκαστου ὑμῖν τινα καλὴν εἰς μέσον ἔξος ποιήσαν. καλὴν δὲ ταύτην ἐνάμερον τῷ παρακείμενῷ τῇ ταύτῃ καὶ γνώμην ἔχειν δοκοῦσαν χρησίμην εἰς τοῦ βίου.

They are called skolia not because of the mode of the melody, namely that it is “crooked” — for they say that [songs] in slack modes are crooked; rather there were three kinds of songs, as Artenon of Kassandrea states in the second [book] of The Use of Books, amongst which are those sung at parties. Of these types the first was that which it was customary for all to sing. The second type was one which all sang, certainly, nevertheless according to a certain path in succession. The third had its ordering amongst all, although not all participated,

---

56 Pl. R. 398.E.9-10: (9) Τίθεν δὲ μαλακὰ τε καὶ συμποτικὰ τῶν ἀρχαίων; (10) Ἰαστί, ὃ δ’ ὦς, καὶ λυδικὸ αὖ τίθεν χαλαρᾶς καλοῦνται.
but only those considered the skilled and in whatever place every one happened to be. Therefore, it was called *skolion*, occurring neither in chorus nor in ordered succession, but wherever they [the singers] happened to be, since they held a certain disorder, at least compared to the other types. This type was sung when the shared songs and those obligatory for all ended. For from that point on, they thought it right for each of the experienced [singers] to offer some beautiful song for the group. They called this a beautiful song especially if it seemed to carry advice or some maxim useful for life.

Neither Aristoxenos nor Athenaios write that the melodies were not crooked, only that the path of the melody did not give the term its name. In fact, Aristoxenos and Athenaios in particular imply quite the opposite to the manner in which this statement has been understood by some, namely that the melodies were simple;\(^{57}\) the melodies were, or at least could be, “slack” (see note 56), but the path of the singing was the reason for the name. Athenaios then goes on to quote Artemon of Kassandreia, whose source was surely Dikaiarchos given the exact correspondence of the divisions to his own.\(^{58}\) First all sang together, then all sang, but singly in succession, and finally the most talented sang, wherever they happened to be. This final group gave the practice its name. Athenaios mentions, as does Aristoxenos, that the songs considered best were gnomic or didactic. The temporal progression implied in Dikaiarchos is emphasized in Athenaios’ record of Artemon’s work and the essentials of Dikaiarchos’ explanation remain clear in the tripartite division of singers. Athenaios has certainly read Dikaiarchos, although through his own direct source, Artemon of Kassandreia (see note 58), and has probably had access to Aristoxenos’ views on the *skolion*. He has added to the meat of Dikaiarchos’ etymology Aristoxenos’ comment, or one with the same content, concerning the music of the *skolia*.

---

\(^{57}\) cf. Lambin (1993), 34-35.

\(^{58}\) Reizenstein (1893), 1-2 *et passim*. In particular, see p. 1, “Die Erklärung Dikaiarchs … liegt uns bekanntlich in einem Auszug des Artemon bei Athenaios XV 694A vor” and p. 9 where he calls the passage “das Dikaiarch-Excerpt Artemons”.
Plutarchos also repeats Dikaiarchos’ triple division in his *Quaestiones Conviviales* 615B, and like Aristoxenos and Athenaios mentions the manner of musical composition of the *skolia*:

ἐπεὶ τοι καὶ τά σκολία φασιν οὐ γενος ἁσμάτων εἶναι πεποιημένον ἀσαφῶς, ἀλλὰ ὅτι πρῶτον μὲν ἤξει ὡδὴν τοῦ θεου κοινῶς ἀπαντάς μὲν φονῇ παναχώρητος, δεύτερον δὲ ἐφεξῆς ἐκάστη μορφής παραδειγμένης, ὃν αὐτάκον ὁμαι διὰ τὸ ἤδειν τῶν δεξιμενῶν ἐκάλου, ἐπὶ δὲ τούτῳ λύρας περιφέρουμεν ὅ μὲν παναθεμένος ἐλάμβανε καὶ ἤδειν ἀμοιβάμενος, τῶν δὲ ἀμοιβῶν οὐ ποιοπέμενων σκολίων ὁμομασθή τὸ μὴ κοινὸν αὐτῶι μηδὲ ῥάδιον. ἀλλοι δὲ φασιν τὴν μορφήν οὐ καθεξῆς βαδίζειν, ἀλλὰ καθ’ ἐκαστὸν ἀπὸ κλίνης ἐπὶ κλίνην διαδιήρεσθαι· τὸν γὰρ πρῶτον ἀπαντά τῷ πρῶτῳ τῆς δευτέρας κλίνης ἀποστέλλειν, ἀκείνον δὲ τῷ δεύτερῳ τῆς τρίτης, ἐστὶ τῶν δεύτερων ἁμοίως τῷ δεύτερῳ, καὶ τῷ ποικίλω καὶ πολυκαμπτως ὡς ἕσεις τῆς περιοδοῦ σκολίων ὁμομασθῆ.

So then they say that the *skolia* are not a kind of song composed in an obscure manner, but that first all sang a song for the god together, sounding the paean in one voice, second when a myrtle twig, which I think they called *aisakos* because one sang after receiving it, was handed over in order to each; after this the lyre was brought around, and a trained player took it, and tuning it sang; since the untrained refused it was called *skolion* because it was not common nor easy. Others say that the myrtle twig did not travel in order, but that it was passed to each from *kline* to *kline*; for the first singer passed it to the first on the second *kline*, and this man to the second on the third couch, thereupon the second man likewise to the second man. It was named *skolion* also, it seems, because of the intricate and twisted nature of the path [of singing].

He seems to imply that the songs were not the sort which were ἀσαφώς πεποιημένα, that is they were not obscure or indistinct. But what is his purpose in mentioning the manner of composition in this way (his vocabulary is markedly different from that of Aristoxenos and Athenaios who both use the word *μελοποίησα*)? The context of the passage provides the answer. Plutarchos has been discussing the suitability of philosophy as a conversational topic at dinner parties; he recommends
it, but stresses the need to retain a level at which all can join in (κοινωνία). This theme of a common level in any activity, so that all can enjoy themselves, occurs often in this context in the Quaestiones Conviviales\textsuperscript{59}, and he carries the ideal into the singing of the skolía:\textsuperscript{60} Ἄσαφως is used here by Plutarchos more as an expression of the proper kind of skolía to sing (i.e. not obscure and thus accessible to all) and not, as in Aristoxenos and Athenaios, in contrast to the explanation of the origin of the term through the path of the singing. Moreover, Ἄσαφως is not intended to mean musically difficult, although it does seem to mean difficult to understand. The statement of musical difficulty is expressed clearly in μὴ βάδιον.

The direct statement of the musical difficulty of at least some skolía is found here in Plutarchos for the first time, although it has been implied in the the sources above (i.e. only the very talented or trained participated in the third kind of skolion\textsuperscript{61}). Reitzenstein believed that Plutarchos’ source for this etymology was Didymos Chalecenteros, a Hellenistic writer.\textsuperscript{62} This is not an improbable suggestion, but impossible to prove (or disprove). Mention of Didymos’ etymologies is found in Etym. Mag. 718.35: σκολία: τὰ συμπτωτικὰ έξωματα· Διδυμός φησιν διαφόρως ἐπιμελοντα ἐν γ’ Συμποσιακῶν. It appears that Didymos’ three books addressed the different etymological explanations of certain terms associated with the symposion. They do not survive, even in quotation, and cannot be used as evidence.

\textsuperscript{59} For example, at 614D-615A Plutarchos explains the need for keeping the topics of philosophical discussion rather simple (τὰς χρησιμος ἀπορίας) and the problems familiar (γνώσια τὰ προβλήματα) so that less intellectual symposiasts might not be discouraged from participating (615D). If not, “αἰχτεται τὰς συμπτωτικὰς κοινωνίας τὸ τέλος καὶ καθίσται ὁ Διόνυσος” (615A). Just as the wine is shared by all, so too should the conversation (614E).
\textsuperscript{60} Teodorsson (1989, 132) has also noticed this emphasis.
\textsuperscript{61} Although the restriction of the third type συνεπίστευτον might only reflect a desire for good singing. The difference between the quality of a trained voice and an untrained, but nevertheless good, voice is considerable.
\textsuperscript{62} Reizenstein (1893), 8ff., 12ff., 39; followed by Aly RE s.v. σκόλιον col. 561.
Although the etymology of the term skolion is not essential to this study, a mention of the difficulty of skolia must include a discussion, however limited, of the derivation of the term σκολιός = "difficult". Severyns suggests a derivation from δό(-)σκολός which was put forward by Dikaiarchos and which only Plutarchos has reported correctly; Dikaiarchos and Aristozenos both revised this etymology. But, as Teodorsson points out, this pre-supposition is unacceptable, particularly since this derivation is completely unattested before the scholium on Wasp 1222, which mentions it only in connection with the particular practice of "capping" (supra). Furthermore, Dikaiarchos argues for a derivation from σκολίος. Teodorsson dismisses the argument of Severyns on these grounds; he also considers Plutarchos' report of Dikaiarchos' etymology to be corrupt:

But how did it come about that Plutarch, at the end of his accurate report of Dicacearchus' description of the sympotic songs, suddenly stated the etymology σκολίων = διώσκοιλως [sic], which was alien to him? It appears that the answer is rather easy. If we analyse the clause σκολίων ὁμοιόμαθη τῷ μὴ κοινῷ αὐτοῦ μηδὲ κακὸν, we observe that only μηδὲ κακὸν refers exclusively to that etymology; τῷ μὴ κοινῷ αὐτοῦ applies equally well to the etymology ἡ τῶν σκολίων διάδοσιν τῆς λίφος, i.e. that of Dicacearchus. The phrase μηδὲ κακὸν looks like an addition. Plutarch's context indicates that it probably is.

Teodorsson's solution, while ingenious, faces the same difficulty as Severyns': the fact remains that the scholium on Wasp 1222 is the earliest mention of the difficulty (διώσκολος rather than δόσκολος) of the skolion preserved in any form, and must then form the basis for any conclusion. Severyns forms a conclusion based on a conjectured source by Dikaiarchos which contradicts the preserved writings of the same author on the same subject; any position based on such evidence is

64 Teodorsson (1989), 129-30
65 Teodorsson (1989), 130.
66 It is very difficult to date the scholiasts' work, since they appear to fall into three strata: the Hellenistic scholars who established texts, the scholars of the first centuries A.D. who wrote commentaries using the work of the earlier scholars to some extent, and then the final Byzantine redactors. But the earliest scholars are quoted extensively, and it seems safer to assume that unattribution observations are much less likely to come from them, but rather from the later commentators or the final redactors.
unteasurable. Teodorsson for his part has equated the "μηδὲ ῥάδιον" of Plutarchos with δυσκαλος and has dismissed it because it does not match the explanation of Dikaiarchos (which does appear at the end of the passage). But "μηδὲ ῥάδιον" should not be equated with δυσκαλος because, although it first appears in a source which may be earlier than Plutarchos (in the scholiast to Wasp 1222\(^\text{67}\)), when δυσκαλος does appear it is used to describe, not the singing of the συνετώτατοι, but rather "capping", the practice which Plutarchos clearly uses to justify the derivation of σκολιος = "crooked". It seems more likely that "μηδὲ ῥάδιον" is Plutarchos' own expression of the "difficulty" of the songs sung by the συνετώτατοι, a "difficulty" which had been implied in the earlier sources by the fact that only the most trained took part. This is, in fact, precisely what Plutarchos writes, "after this the lyre was brought around, and a trained player took it, and tuning it sang; since the untrained player refused it was called skolon because it was not common nor easy" (my italics).

Plutarchos is the first to suggest a derivation based on difficulty: the songs sung by the συνετώτατοι were difficult. This suggestion of difficulty arises, surely, from the increasingly complex and decorative style of music in the very late fifth and early fourth centuries B.C. — after the period under investigation in this thesis — with which Plutarchos himself, as a musical scholar, was very familiar. A thorough study of this 'new music' may be found in Greek Musical Writings I: The Musician and his Art, (1984) by Andrew Barker, chapter 7.\(^\text{68}\)

Plutarchos, then, provides two etymologies of skolon: from σκολιος = not easy, which he himself has contributed in reference to the third division of Dikaiarchos, and from σκολιος = crooked. The division of types of skolia is in keeping with that of Dikaiarchos, as is the mention of

\(^{67}\) For a brief discussion of the problem of dating the scholiasts please see Appendix I.

\(^{68}\) For example, in reference to Timotheus, who was active in the late fifth and early fourth centuries B.C., Barker writes: "What then did Timotheus' 'new music' amount to? The fragments provide adequate evidence of his association of different rhythms, of a strained and artificial diction and of linguistic fancy embroidering ideas beyond the limits of sense." (1984, 96)
the myrtle twig. Plutarchos has added mention of the lyre to a tradition which did not previously mention specific musical instruments at all.

The scholium to Aristophanes’ Wasp 1222, the etymological suggestion of which has already been discussed in detail, presents a certain element of the skolion which seems at first to be at odds with the established division of Dikaiarchos:

τά σκαλιά ὡς δέξη καλῶς: Ἄρχοντων ἦθος ἑστιομένως ἦδεν ἀκολούθως τῷ πρῶτῳ, εἰ παύσατο τὴν ὁμήρη, τὰ ἑξῆς, καὶ γάρ ὃ ἐξ ἀρχῆς διάφων ἢ μυρόνην κατέχων ἦδεν Σιμωνίδου ἢ Στεσίχορος ἄρρητα αὐτὸς ἐκείνως, καὶ μετὰ ταῦτα ὁ ἐβούλετο ἐκεῖνος, οὐχ ὡς ἢ τάξις ἀπήτητε. καὶ ἔλεγεν ὁ δεξίομενος παρὰ τοῦ πρῶτου τὰ ἑξῆς, καθ’εἰκός ἐπεδίδον πάλιν ὁ ἐβούλετο, διὰ τὸ πάντας ὁ ἄρτος ἀπροσδιοκήτως ἦδεν καὶ λέγειν τὰ μέλη, σκαλιά εἰρηται, διὰ τὴν δύσκαλαν.

So that skolia might be well explained: it was the ancient custom for guests to sing in order following the first, if he should interrupt the song. For in fact the one first holding the laurel or myrtle sang a song of Simonides or Stesichoros as far as he wished, and after this gave it to whom he wished, not as the physical order would dictate. And the one who received from the first [singer] recited what followed, and he then passed it on to whomever he wished. Therefore because all sang and recited the songs unexpectedly, it was called skolia, because of the difficulty (δύσκαλως).

The scholiast to this passage refers to a practice of “capping” songs. A singer, who held a myrtle or laurel twig, would sing a song to a point of his own choosing, and then hand the twig to a fellow symposiast of his choice; this person would then have to complete the song or choose another, if the first song was finished. It seems from the passage which the scholiast is explaining that this would often have humourous results. Because of the difficulty (δύσκαλος) of this practice, it was

---

69 See n. 67.
70 An observation which is borne out also, as Barker (1984, 43) points out, in the Homeric Hymn to Hermes and at Theocr. 5.80 ff, esp. 116-23.
called σκόλιον. Rather than posing a problem in regard to Dikaiarchos’ divisions, I believe that this particular practice is a component of, or a development from, Dikaiarchos’ third division. We have here, as in Dikaiarchos, a practice in which all participate, a solo singer holding a myrtle or laurel twig, and an irregular path of singing. This is the first example of an etymology in which the derivation from δίσκολος is proposed. As we have seen in the discussion around the explanation of Plutarchos, it is highly specific to this one division of skolion. Based on the evidence available, it is not likely to have existed earlier than this scholium, although the notion may very well have been carried through from Plutarchos’ discussion of the third division of skolia.

The scholium on Aristophanes Wasps 1239 also echoes Plutarchos’ etymologies:

οἱ δὲ φασίν ὡς ἔθος ἦν τῶν μὴ διαιμενῶν ἐν τοῖς συμποσίοις ἡσυγκατα τῶν καλῶν ἢ μεγαρίχης λαβόντα πρὸς τοῦτον ἄδηλον. ἦν δὲ φασίν ὡς ἐν τῷ ἑαυτῷ προσηγορεύοντες σκολίαι τὰ παροίνα μέλη. ἀνάλα γὰρ αὕτα ἑχοὺς εἶναι καὶ εἰκόνιν, ὡς παρὰ πάντων ἄδηλον. οὐκ εὖ δὲ τοῦτο τὰ γὰρ διόθεν ἐπὶ τὸ εὐθυμότερον μεταλαμβάνεται, ὡς μὴν τοῖμπαλον ἀλλ’ ὅτι οὐκ ἀπὸ τοῦ ἑξῆς ἡ λύρα τῶν συμπόσιος ἐδόθη, ἀλλ’ εὐκαλίας, διὰ τὴν σκολίαν τῆς λύρας περισσότερον σκολία ἔλεγεν.

They say that it was the custom for one who cannot bear to sing at symposia to hold a twig of laurel or myrtle and sing to that. Others say that drinking songs were called skolia for the opposite reason. For it was necessary that these be simple and easy, since they were sung “under the influence”. This is wrong: unfavorable associations become more favorable, not the reverse. But because the lyre was passed on to the symposiasts not in geographical order, but in another fashion, [the songs] were called skolia on account of the crooked path of the lyre.

71 Or at the very least, all who chose to participate on each occasion.
72 A practice which Dikaiarchos describes in the scholium on Ar. Nu. 1365 (see above). The possibility of recitation being included in such a practice (instead of singing) should not be discounted, although the meaning of λέγων here is far from secure.
73 See n. 67.
The scholiast here provides three pieces of information: some singers, less confident in their ability, held a myrtle or laurel twig, perhaps as a sort of worry-bead;\textsuperscript{74} the songs were difficult, although the scholiast's reason seems based on opinion more than anything else; the order of singing was designated by the crooked passage of the lyre. The scholiast here rejects the derivation of σκαλιός = difficult emphatically, and turns to Plutarchos' first etymology: the term derives from the "crooked" path of the singing (although here it is the lyre which determines the order, and not as in Plutarchos the twig) amongst the symposiasts. The scholiast must be referring to the third division of Dikaiarchos, which has been adopted by all subsequent ancient sources, since he distinguishes between the passage of the lyre in order (ἀνά ἐπί) — the second division of Dikaiarchos — and the crooked passage (τὴν σκαλιάν περιφοράν) of the lyre which seems to correspond with the third division of Dikaiarchos.

To sum up, the information provided by an examination of the etymological sources proves valuable for a reconstruction of the practice. The divisions of Dikaiarchos seem to be accepted, if not always outlined in full, by the majority of later writers, and are not expressly contradicted by his contemporary Aristoxenos. Both Aristoxenos and Dikaiarchos mention the use of a twig of myrtle (or laurel) to designate the singer; for Aristoxenos it was the passage of this twig in an irregular order around the symposiasts that gave the term its name, while Dikaiarchos only remarks on the crooked path, but does not provide a reason.\textsuperscript{75} This σκαλιός = crooked etymology is continued by most writers, although the later ones seem to be less satisfied with this explanation, and turn towards etymologies based on the difficulty of the song or the singing. It is possible that

\textsuperscript{74} This possibility was suggested by Dr. E. Dickey in discussion concerning this passage.

\textsuperscript{75} Although the mention of the twig appears in a different passage in the scholia. These two scholia may have taken information from one passage in which Dikaiarchos links the crooked path with the passage of the twig.
recitation (parakatoloe76) while holding a myrtle or laurel twig might have been numbered among the activities at symposia, and it is plausible from other evidence that this recitation, as also the singing while holding a twig, in some circumstances, took the form of “capping” at least from the time of Aristophanes; clearly the agonistic nature of Greek society (at any period) would support the possibility of competitive performance which might give rise to such a practice. Our earliest sources do not mention an instrument characteristic of the skolion of the third type, but the lyre soon appears in later sources as the preferred instrument. This may give an indication of the time frame/period to which the later writers were addressing their explanations, since the aulos was the earliest preferred instrument according to the witness of extant symptic poetry and other relevant literary sources, but then fell out of use in the Classical period. The evidence of the containers, however, shows both in use accompanying singers at symposia.

We cannot always be certain to which time frame writers are referring in their descriptions. Obviously, Aristozenos and Dikaiarchos are closest to the Archaic period, and might have a better understanding of the earlier practices. But neither states clearly that their explanations refer exclusively to the earlier periods — although Dikaiarchos’ comment as recorded in the scholium on Clouds 1364 may very well refer exclusively to an earlier period, at least in part — and later writers combine and revise the explanations with abandon, without any regard to historical context.77 This inevitably results in a confused picture of a practice, a picture compiled over several centuries and which may have little to do with the actual practice in the Archaic period. However, the information which is most secure because it is accepted by most of the ancient sources, and by all of the important ones, is also the information which comes from the

76 For an explanation of the term, see West (1992), 40.
77 Unfortunately, this is also seen in some modern discussions of the etymology of the term, notably Lambin (1993) and Teodorsson (1989). Lambin (1992), 222-223 neglects the possibilty of an evolution in the practice.
sources closest in time to the Archaic period: there was a division in the manner of performance; solo singers (of the second and third divisions) might hold a laurel or myrtle twig; it was the order of the singers in the third division — erratic because not all participated and marked by the passage of the twig or a lyre — which gave the term its name.

The conclusions reached concerning the practice of the skolion on the basis of the information contained in the etymological sources, if not in the etymologies themselves, are not in conflict with the conclusions reached on the basis of the evidence provided by the literary testimonia for the term and the remains of poetry known to have been sung at symposia. The general nature of the term already noticed in the literary sources is borne out by the triple division of the etymologists, a division which admits the possibility of performance solo or tutti (see above p. 18 ff.). This tendency of the term to include any genre of poem sung at symposia is further reinforced by the varied metres of the poems actually named skolia, and of the poems which are probably also skolia. The triple division may in fact reflect several modes of performance, all of which are called skolia (since they are sung at the symposion). The first division probably includes choral poems, paians, spondeia (libation hymns); the second involves solo-singing which proceeds in a determined order, while the third probably includes original solo compositions, or performances of works by the great poets, sung by the most skilled without a determined order. The information provided by the etymological sources is remarkably consistent, except for Plutarchos. If we examine the remaining evidence for the practice of the skolion — the evidence from the containers — we will be one step closer to a fuller understanding of the practice.

78 Remarkably consistent in terms of division of performance and mention of the passage of a twig of myrtle or laurel; Plutarchos adds mention of the lyre and a further description of the passing of the myrtle twig in the second division which, although it did not follow a strict "geographical" order, was nevertheless a determined order.
Material Evidence from the Containers

Amasis Painter, Tripod Pyxis on Aegina.

A black figure tripod-pyxis by the Amasis Painter found at the Sanctuary of Aphaia on Aegina (figs. 1.1-1.4) preserves a remarkable long inscription. The container and its inscriptions have been thoroughly discussed by Martha Ohly-Dumm in Appendix Four of Bothmer’s The Amasis Painter and his World; only the long inscription, which Ohly-Dumm designates a skolion, will be discussed in detail here. Although the pyxis is fragmentary, the three scenes, one on each leg, include a wealth of inscriptions, mostly names, but also including an early example of “kalos” and a longer inscription ΕΛΙΟΣΟΙΔΕΝΚΑΙΓΟΜΗΝΟΣ:ΑΥΤΟΣ || ΠΙΑΔΑΚΑΛΟΝ. The length of the inscription, as also the type of container, is unusual for the Amasis Painter.\(^\text{79}\) It dates from c. 540 BC. While the inscription itself appears on Ohly-Dumm’s side A, a burgeoning battle between Kyknos and Ares on the one hand and Herakles and Athena on the other (Zeus appears to be attempting to mediate), it “in character belongs with the love-scenes on C”\(^\text{80}\) (fig. 1.4), courting between youths (and/or men?). The inscription itself runs orthograde down the height of the pyxis leg, behind Ares, in two lines; the beginning of the first turns sharply downward — after beginning on the horizontal — before the final sigma of ΕΛΙΟΣ (see fig. 1.1). There is an interpoint after ΜΗΝΟΣ and before ΑΥΤΟΣ indicating, writes Ohly-Dumm, the end of a verse.\(^\text{81}\) The second line of the verse begins halfway up the pyxis leg. Again, it travels downwards, but finishes boustrophedon because of the placement of Ares’ leg.

\(^{79}\) Ohly-Dumm (1985), 238.
\(^{80}\) Ohly-Dumm (1985), 237.
\(^{81}\) Ohly-Dumm (1985), 238.
Ohly-Dumm outlines two possible ways of reading the verses. One, which she rejects, would begin the verse after the interpoint, to return to the first (outside) line to complete it, making the verse as a whole a Major Asclepiad: ἈΤΟΣ | ΠΑΙΔΙΑ | ΚΑΛΟΝ | ΕΛΙΟΣ | ΟΙΔΕΝ | ΚΑΙ | ΕΓΟ | ΜΗΝΟΣ “The sun itself and I alone know the beautiful boy”. However, she prefers the verses to be read as they were written; in this case the inscription would be the end of one line and the beginning of another: ΕΛΙΟΣ | ΟΙΔΕΝ | ΚΑΙ | ΕΓΟ | ΜΗΝΟΣ | ΑΤΟΣ | ΠΑΙΔΙΑ | ΚΑΛΟΝ “Helios knows and I alone // the beautiful boy he himself has”. She has assumed that the interpunct marks a verse division and that, accordingly, the metre — for the two partial lines — would remain a Major Asclepiad, based on the observation that several of the Attic skolia found in Athenaios’ collection are in that metre and that the lines taken in reverse order form a complete Major Asclepiad. But we have already seen that for the skolia, metre is quite variable and should not be considered a determining characteristic of the “genre”. Ohly-Dumm discusses the difference in meaning of the two readings:

The underlying thought is different in the two cases. In the first the lover is concealing the name of his beloved, known only to the divine and omniscient sunlight. The reason for concealment is probably worry lest others should go courting the loved boy. That at least is the thought in an epigram ascribed to Plato (Anth. Pal. 7.100). In the other reading the name of the “pais kalos” and a descriptive epithet for Helios may have come at the beginning of the first line. In that case the poem is in praise of a beloved whom no one else knows how to appreciate, a common conceit in erotic epigrams [examples given].

---

84 Ohly-Dumm (1985), 238.
85 Ohly-Dumm (1985), 238. Many skolia in the same collection, however, are in different metres.
86 Ohly-Dumm (1985), 238.
Either reading is thematically consistent with much of sympotic poetry. While the order of the inscription (i.e. as it is written on the pyxis-leg) must be correct, the explanation of ordering of the lines preferred by Ohly-Dumm is inconsistent with the apparent function of the verse-scrap skolia examined in this thesis: as we shall see, all verse-scrap skolia begin a line from the very beginning, perhaps as a title, or as a mnemonic device for performance. This surely must be the case here also, if it is a skolon; the inscription begins at the beginning of a verse, not in the middle. But how to explain the interpoint? And what is the metre?

The length of the inscription is remarkable for the Amasis Painter (who confines himself elsewhere to name-labels and his potter’s signature) and may indicate that it was commissioned by a client for a special occasion, or even that the painter or potter or both (or the painter/potter — one person!) acted as dedicator; the entire work may possibly — given the find site — have been commissioned as an offering at the sanctuary. The unusual shape of the container and its unique (for Amasis) inscription support this supposition. The interpunct then, rather than marking the end of a verse, as Ohly-Dumm is convinced, might have been added by the Amasis Painter to mark a separation of line found in the original copy provided by the commissioning client; Amasis Painter, running out of space on a very small area (the pyxis is only 7.3 cm. in height, with the length of the concave field about 10.1 cm. ), continued the verse without separating the lines as they had been on the original, because he saw that there would not be room for the entire second

---

87 Although there is a case of the second line of a pot inscription written “above” the first in a similar fashion on a kantharos by Nearkhos in the National Museum Akropolis collection (NM Akr. 611; ABV 82.1; my fig. 1.5). But in this case it is very clear how the two lines are meant to be taken, especially since the break occurs around an elision of the epsilon in ME and the e-augment of the aorist ΕΓΡΑΦΕΝ. Amasis himself has written a potter’s signature in a similar way on at least two olpai, one in Paris (Musée du Louvre, F30; ABV 152.29; my fig. 1.6), the other in Würzburg (Martin von Wagner Museum, L332; ABV 152.30; my fig. 1.7).
88 Ohly-Dumm (1985), 238.
89 Ohly-Dumm (1985), 238.
line between the first and the figure of Ares. In fact, another attempt to accommodate the length of
the inscription to such a small writing surface was made at the very beginning of the inscription
with the placement of ΕΛΙΟΣ (see above p. 36). Taken this way the inscription is a continuous
thought and makes more sense than Ohly-Dumm’s preferred “split” reading. The ΑΥΤΟΣ, if it is
the intensive, probably modifies ΕΓΟ rather than ΕΛΙΟΣ, judging from its placement in the line, in
which case the line should read: “Helios knows, and I myself alone, a beautiful boy”. This option
marks clearly and emphatically the thought contained in the lines, that the speaker alone — among
mortals — “knows” the beautiful boy.

But there is another way to read the inscription, and another possible reason for the
presence of the interpunct. ΑΥΤΟΣ might also represent αὐτῶς (E.L. Brown90): “Helios knows,
and I alone likewise, a beautiful boy”. Read in this way as an adverb, ΑΥΤΟΣ more strongly
emphasizes the erotic theme of the inscription, setting the lover on a par with the god in knowledge
of the beloved.91 Although the interpunct may not serve any purpose at all, in terms of line or verse
division,92 I suggest that it does serve to separate ΑΥΤΟΣ, the adverb, from ΜΗΝΟΣ — but not
from the rest of the line — in an attempt to highlight its function as adverb in the sentence, so that
it not be understood to agree with ΕΓΟ. Forced by the assumption that the lines are metrical and
that the interpunct marks a verse division, Ohly-Dumm had to speculate the missing verb in her
second line, “has” (see above), in order to make sense of the inscription as it is written. But the
inscription should be read continuously and as if it were complete, with ΑΥΤΟΣ adverbial (and the

90 apud Immerwahr (1990), 36, no. 152.
91 Cf. APl. 7.100.
92 Threatte (1980), 76-80, 4.012 discusses the use of interpuncts in private archaic texts. Although the
division of stichoi is one of the uses of the interpunct on stone inscriptions, Threatte remarks that “the
various vase-painters are quite inconsistent in using them [interpuncts], sometimes placing : or : between
their name and ἔμελεος in their signatures and sometimes not (e.g. Sophilos, Kleitias, Exekias, Eucheiros,
Xenokles, etc.), and it seems likely that the effect may sometimes have been decorative.” (80, no. 6) An
interpunct is used on side C simply to divide ΚΑΛΟΣ from the word in front of it.
interpunct used to make its function more clear; read in this way it has a sense complete, and very clear, in itself.

The lines considered in this way are not metrical, and should therefore not be considered a *skolion* verse-scrap. Rather, and more reasonably, the inscription was included on a container — the shape and long inscription are very unusual for the Amasis Painter — which was made to be offered at the Sanctuary. The coincidence of the division of the lines of the inscription into parts of two Asclepiadian lines may indicate that these words did in fact come from a poem. But the inscription on this container found at the Sanctuary of Aphaia on Aegina does not record a *skolion per se*; rather, it records a love inscription — which may be parts of two lines of a poem — included on a sacred offering. Perhaps the one who offered it thought his love might be sanctified, or ensured of success, in this way. Certainly, as a dedicated offering it, and its inscription, would be on display for all to see.

**Euphronios, Calyx-Krater in Munich, Antikensammlungen 8935; ARV² 1619, 1705.3 bis; Para 322.**

Euphronios, a red figure painter active in the late sixth century well-known for his longer inscriptions, provides two more verse scrap inscriptions from *skolia*, one on a fragmentary calyx-krater and the other on a neck amphora. In addition to noting the relative frequency of longer inscriptions on Euphronios’ work, Immerwahr also remarks that Euphronios rarely uses

---

93 Unfortunately, I have not been able to find a parallel use of the interpunct to support this claim.  
94 M. Kilmer (pers. comm.).  
95 Psyktier, Leningrad 644; cup, London E41; neck amphora, Louvre G107. Immerwahr (1992, 50) notes that longer inscriptions continue to occur in the works of painters associated with Euphronios’ pottery, although many works by other Pioneers also have longer inscriptions.
"nonsense" inscriptions.\textsuperscript{96} There seems to be an evolution in the lettering on Euphronios’ works, from small and untidy on early containers to larger and firm in his middle period then, in the last decade, becoming smaller and less neat.\textsuperscript{97} Finally, Euphronios seems always to express geminate consonants (and occasionally expresses single consonants in a geminate form). A good example of this geminate consonant is found in the first verse-scap by Euphronios.

Fragmentary remains of a symposion scene (figs. 2.1-2.3) were first published and discussed by E. Vermeule in 1965,\textsuperscript{98} this red-figure calyx-krater, dated to the late sixth century, was attributed to Euphronios by R.E. Hecht Jr.\textsuperscript{99} Sides A and B are separated by a complex of palmettes which was, presumably, above one of the missing handles. Around the exterior of the rim runs a repeated palmette pattern between two wide reserved bands. What is left of Side B (fig. 2.2) portrays a near complete youth, naked but wreathed with a garland, a stand with ladles and a lamp with two flames, the upper portion of a dinos and stand, into which the right arm of another person dips a trefoil oinochoe; a lyre above this. The youth, in motion towards the dinos, is turning to look back, right arm raised back and slightly up. An inscription LEAΓΡΟΣKAΛΟΣ\textsuperscript{100} begins behind his head, just under the lower reserved band. Five figures, all named in inscriptions (reserved) occupy the larger scene on Side A (fig. 2.1): from left to right Tho(u)demos (the top of the black haired head), Melas (a blond man reclining on a kline), Suko (a blond woman playing a diaulos), a blond young man (Smikros)\textsuperscript{101}, and a bearded man (Ekphantides).

\textsuperscript{96} Only once on the reverse of the neck of the volute krater, Arezzo 1465 (Immerwahr, 1992, 51). He does admit, however, that he knows “the inscriptions only from plate 62 in Fürtwängler-Reichhold.” (1992, 55, n. 33)
\textsuperscript{97} Immerwahr (1992), 51-52.
\textsuperscript{98} Vermeule (1965), 34-39.
\textsuperscript{99} Vermeule (1965), 34; ARV\textsuperscript{2} 1619.
\textsuperscript{100} This is a common kalos name at this time, and in the work of the Pioneers particularly.
\textsuperscript{101} Perhaps even the painter Smikros, who appears to have a connection with Euphronios. I should be quick to point out that attributing names, unsupported by a patronymic or demotic identifier, found on figured containers to historical people is largely an exercise in fancy; in regard to the name Smikros, which could be as much a nickname as anything else, Boardman (1975, 30) states that it is common. The
Thoudemos gazes straight out at the viewer from behind his kylix; sharing a kline with Thoudemos is Melas, who appears to have turned his head toward the sound of singing, and is listening with right hand raised as though about to cup his ear. The younger man Smikros reaches out with his right hand towards the aulist Suko, while the older Ekphantides sings, head up, right arm and hand wrapped over and around it; all three men visible are garlanded in red. Suko, who is wearing a meander pattern headband, plays the dicaulos with head slightly raised and fingers in the typical position for aulists.\textsuperscript{102}

Ekphantides sings a skolion, ΟΠΟΛΛΟΝΣΕΤΕΚΑΙΜΑΚΑΙΡΑΝ> “O Apollo, both you and the blessed ...,”\textsuperscript{103} which emerges from his mouth retrograde (and so to the left). Although Vermeule has read ΓΕ (for TE), Beazley in Paralipomena reads TE,\textsuperscript{104} and is followed by H. Immerwahr, who further notes that the Ionic gamma “probably does not appear so early”.\textsuperscript{105} Immerwahr’s own reservations should be noted, however: how widespread the use of the Ionic gamma was before its official introduction in 403/2 B.C. is not known,\textsuperscript{106} and the Ionic gamma is found on early graffiti in the Agora which may, or may not, have been written by an Athenian.\textsuperscript{107} Kilmer also expressed his reservations concerning the Ionic gamma to me, and stated further that

\textsuperscript{102} In fact, this is the same finger position used for kottabos-throwers on many vases. Athenaios (XV.667a) preserves a small excerpt from Antiphanes’ Αθροδιάτης Γεναι: αὐλητικώς δεὶ παρακχοῦν ταῖς διάστάλαις σύν τε μικρῶν ἐγκέχαι καὶ μη παλάν. ἐπεὶ ἄφησες ἃνα καὶ κράβεις, πούρε, not too much; then you throw it”.

\textsuperscript{103} Beazley completes the line ὑπολάθαι στὶ καὶ μᾶκας ἐρατί αἴτω “O Apollo, I make reverence to you and the blessed ...” (ART\textsuperscript{S} p. 1619); Vermeule suggests several other options (1965, 38-39).

\textsuperscript{104} Para 322.

\textsuperscript{105} Immerwahr (1990), 64.

\textsuperscript{106} Immerwahr (1990), 179.

\textsuperscript{107} Immerwahr (1990), 180. The graffiti are Agora P10511 and Agora P26179, both from the early fifth century.
he would not expect isolated Ionic letters in an inscription otherwise purely Attic.\textsuperscript{108} The consensus, then, is that this is probably too early for an Ionic gamma, and certainly an unlikely occurrence in this particular inscription; the reading should be left as read by Beazley.

Verses addressed to various gods, Apollon among them,\textsuperscript{109} begin the collections of skolia found in Athenaios, as well as the Theognidean elegies; Apollon is certainly not an inappropriate addressee if only because he himself was a banquet performer with the Muses in the Iliad.\textsuperscript{110} We must not assume from this, as do van der Valk (1974, pp.1-2), Harvey (1955, p. 162) \textit{et al.}, that skolion sessions strictly followed (temporally) the order of the divisions found in Dikaiarchos. A skolion with mention of, or even addressed to, a god or goddess, need not always come only at the beginning of the symposion, although such a skolion probably accompanied the inaugural libation.\textsuperscript{111} Verses addressed to Apollon are found elsewhere in poems intended for, or at the bare minimum suitable for, the symposion, and Euphronios’ snatch of verse may echo a similar sentiment to that expressed in Theognis 759b–761:

\begin{verse}
\textit{αὐτὰς Ἄπαλλαν}
\textit{ἀφθάσαι γλῶσσαι καὶ νόον ἡμέτερου.}
\textit{φόρμης δ’ ἄν φῆμιν θεῷ ἰερὸν μέλος ἄδε καὶ αὐλός.}
But Apollon, arouse our tongues and minds;
may the phorminx, besides, and also the aulos sound a holy song.
\end{verse}

\textsuperscript{108} M. Kilmer, pers. comm.
\textsuperscript{109} The first hymn in both collections is to Apollon (probably as the god of the lyre, \textit{i.e.} music): Thgn. 1-10 (although some editors split this group at verse 5 into two hymns); Athenaios XV.694a. The ordering of material in collections was, of course, arbitrary at some point. Barker (1984, 50) suggests that the Theognidean collection was put together as a sort of song-book for symposia; Reitzenstein \textit{et al.} have argued that the collection in Athenaios had a similar existence before being included in the \textit{Dipnosophistae} (see discussion above p. 14-15).
\textsuperscript{110} ll. 1.601-604.
\textsuperscript{111} There is plentiful evidence for this practice in the fifth century (e.g. Ar. \textit{V.} 1208-50), especially in the \textit{Symposia} of Plato and Xenophon; cf. also Thgn. 762. Some of the “hymns” which begin the collections of Theognis and Athenaios XV.694 may have been libation songs.
The verse-scrap recorded by Euphronios does not match any verses in surviving literature,\textsuperscript{112} and so the speculation as to its nature could be endless. Clearly, however, it is a skolion, addressed to Apollon, sung by one person to the accompaniment of the aulos; the inscription begins a line in a skolion, perhaps a phalacean.\textsuperscript{113} Since none of the others present appear to participate it is not a collective song/hymn, which Dikaiarchos later classed as the first division. I would suggest that this verse-scrap is an example of the third division of Dikaiarchos, the solo song sung by a σωτηρίτας, named here as Ekephantides.

\textbf{Euphronios, Neck Amphora in Paris, Louvre G30; ARV\textsuperscript{2} 15.9, 1619; Para 322; Add 152.}

An inscription on an amphora by Euphronios in the Louvre, G30 (figs. 3.1-3.2) reads ΜΑΜΕΚΑΠΟΤΕΟ. Often paralleled to a fragment of Sappho (frag. 36 \textit{LP}), καὶ ποθῆς καὶ μάχαμας “I yearn for and seek...”, this inscription presents some problems of orthography. The inscription is found on the neck of the amphora; it represents a young man, using the bottom edge of the scene itself as his \textit{kline}, playing a six-stringed \textit{barbitos} as he sings.\textsuperscript{114} Garlanded and wearing a himation, he is leaning back onto a bolster while his head, slightly tilted back to sing, is wreathed by the helical inscription. On the other side of the scene is written ΛΕΑΓΡΟΣ ΚΑΛΟΣ, retrograde.

The inscription itself is retrograde, retaining both direction and spiral ground line as it wreathes the singer's head. There can be little question that this verse-scrap reflects the same

\textsuperscript{112} Although Vermeule points out (1965, 39, n. 24) both the Brygos fr. in Paris (Cab. Méd. 546; see below) and \textit{EtymMag} 544.28 = \textit{PMG} 465 (which hints at δισσωλōν beginning a verse by Anakreon).

\textsuperscript{113} Vermeule (1965), 38-39 where she also discusses several other options.

\textsuperscript{114} Six is not an unusual number of strings for a \textit{barbitos}, although seven is more usual (about half of the representations on pottery; see Maas & Snyder (1989), chapter 5). The number of strings could possibly have ranged from five to eight. The \textit{barbitos} is associated in literature from earliest mention (Alkaios, frag. D12.4) with drinking parties and the \textit{komos}. This association is confirmed in the large number of scenes pairing the \textit{barbitos} with scenes of \textit{symposia}, \textit{komoi}, and general revelling.
thought as in the Sappho fragment, and the attribution has not met with strong resistance. The nature of sympotic poetry certainly allowed latitude in composition, a custom discussed above; the singer is, perhaps, imitating Sappho rather than reproducing the original performance (assuming that our surviving literary version is the more authentic). The orthography of the inscription, however, is decidedly odd, and led Immerwahr to describe it as "badly miswritten". But Euphronios, whose significance in terms of long inscriptions has been noted already, is usually quite within the norm, orthographically speaking, and in fact often anticipates later Attic orthography by expressing the geminate lambda (see preceding example). Furthermore, as Perpillou points out, the inscription is so carefully laid out, and the letters so neatly drawn that mere carelessness in writing is almost certainly not an option. If the ‘incorrect’ forms are due neither to Euphronios’ error, nor to carelessness on his part, how then to explain the strange forms?

Perpillou addresses this question in a recent article. He begins by questioning the criteria by which we designate a form “normal”, and so correct. Far from questioning the existence, or validity of such a norm, however, he simply raises the possibility of a variety of norms:

Mais dans cet examen phonétique à base phonologique, certains usages graphiques anciens non liés au discours public de la cité ou à la célébration des morts, usages personnels ou d’un milieu artisanal, notamment dans ces documents autographes que sont les inscriptions peintes sur vases, sont assez généralement mis au compte d’un «insufficient knowledge of orthographic norm». Mais de quelle norme s’agit-il? De l’emploi le plus pertinent et le plus précis

---

115 The attribution was first suggested by F. Studniczka, JdE 2, (1887), 162.
116 Hartwig (1893), 255, n. 1; Herzog (1912), 18, but he accepts the possibility only because he can think of no other: “Das scheint mir sehr unwahrscheinlich, aber ich finde keine andere brauchbare Lösung”.
117 Could it be that the imitator, if this suggestion is correct, wished to express a slightly different emotion by the different order? Instead of ‘I yearn after [what is lost] and seek it’ (that is ‘I desire something I had and lost, and seek after it’), does the reversed order imply something else: ‘I am seeking and I crave [something]’ (that is, ‘I am seeking something which I do not have, and crave it’)?
118 Immerwahr, (1990), 63.
119 Perpillou (1992), 558
The thrust of Perpillou’s argument is that the strange forms are due to a phonetic rendering of the verse, perhaps an attempt to introduce a regional accent. Perpillou makes two suggestions for the strange form MAME. The first, which he seems to endorse, but for which he gives no evidence, is that the verse may have been intended to represent a Boiotian dialect; the α and ω contracted to make â. This “barbarisme” raises phonetic or morphological questions, but none concerning the painter’s graphic competence. The second, which he rejects but which does raise questions concerning the painter’s competence, is that Euphorion neglected to include the ω. Perpillou also alludes to the faint possibility, in reference to the final vowel, that this inscription may be an early example of the change from |α| to |ε| in Attic Greek. The appearance of κα for καί is easier for Perpillou to justify: such an alteration appears eight times in examples collected by Teodorsson, and is explained by Perpillou as a product of “la langue parlée”. Perpillou cites several examples of crasis from which the word κα may have been extracted and come into common use. ΠΟΤΕΙΟ is explained by Perpillou as a de aspiration, that is τ for θ. He cites S.-T. Teodorsson’s study The Phonemic System of the Attic Dialect 400-300 B.C. (1974) which lists 18

---

121 Perpillou (1992), 557. This is a possibility which is supported both by other examples on red-figured containers of the same period (see below, p. 74, n. 223) and by examples in Ar. Θ. (the Scythian archer). More relevant is the example of the Boiotian in Ar. Αχ., 860ff, although the preserved written representation of similar sounds from both sources may differ.
122 I’m not sure that a lack of lexical evidence in Attic Greek would discount the possibility that the form might be Attic anyway (which I think Perpillou does on 558: “A-t-on, par la même occasion [i.e. regional dialect], commis un barbarisme morphologique ou lexical *μακε* dans un verbe que de tout façon l’usage attique ignore complètement?”). Until a few years ago, “gotta” for “got to” or “got a” would not have been found in a respectable book, except perhaps as colloquial speech; now however it is in the Oxford-Duden German-English, English German Dictionary (1990).
examples of such a despiration. Only five of these 18 are dated before the 480s B.C.; all are names on Attic vases.\textsuperscript{124} Six more are despiration of \textit{kαβ' before a rough breathing. The rest are also proper names. On one example (Teodorsson (1974), \textit{I}2\textit{4.14 = IG} \textit{I/2} 10226.1) the writer corrected his mistake. Perpillou does not offer a complete explanation of his suggestion that the inscription may reflect Boeotian regional pronunciation. However, the suggestion does have some merit, and the possibility at least withstands scrutiny, with some qualification.

The contraction of \textit{ο and ο in all dialects,}\textsuperscript{125} which would make it \textit{ΜΟΜΕ}. It is far more likely that the artist has neglected to write the \textit{ο, whether by design (in which case no satisfactory reason can be given) or by accident. E for AI does not appear with any regularity before c. A.D. 125 and is limited before this time to examples in public texts involving \textit{εεις for demotics ending in \textit{αιείς}.} The only examples on Attic vases listed by Threatte involve the name \textit{Ἀλμυρ(ο)έων,}\textsuperscript{127} and Teodorsson only lists two examples before c. 400 B.C., one of which is a proper name, \textit{Δημήτριος} the other is the inscription in question. However, \textit{ε (represented here correctly for its time by E) from \textit{αω is common in the Boeotian dialect, except in the earliest inscriptions,} and Perpillou's suggestion might in this case be valid. The explanation of \textit{Α for KA} for \textit{KA} offered by Perpillou seems unnecessarily complicated. Teodorsson records 14 examples down to 480/70 B.C. of \textit{Α for AI, all on Attic vases; perhaps the form was read back from these sorts of examples, rather than from crasis. But Threatte, GAI, 15.011, p. 269: "Rare cases of \textit{Α for αι among dipinti and graffiti are due to careless incomplete rendering of diphthongs: e.g. ναξί for ναξί on a bf.}

\textsuperscript{124} Teodorsson (1974), 132, \textit{I}2\textit{4.1-5: ἀποστέω[ς], Στέφω[ς, Σμύκως, Ευμέδης, Κλαστόνος.}
\textsuperscript{125} Buck (1955), 37. Cf. also Threatte (1980), 414, 32.00: In verb forms all the contractions normal in Attic have been completed before the time of the earliest texts.
\textsuperscript{126} Threatte (1980), 294-95, 15.013.
\textsuperscript{127} Threatte, (1980), 296 \textit{med.}, 15.013.
\textsuperscript{128} Buck (1955), 30.
vase of Neandros." If this inscription were a consistent representation of the Boeotian dialect, we would expect KE = κη for και, especially since this same substitution (for final αι) appears to be in evidence in the first word. We have already seen that τ for θ is quite common in this period, but almost entirely in proper names (since a huge percentage of words on pots are proper names). Threatte writes, "that ΠΟΤΕΟ is for ποθηω ... on a lost rf. vase seems doubtful." But deaspirations of the other voiceless stops are frequent (for example, see below Florence 3949, p. 63) in some artists, and bring to mind the pronunciation of the Scythian archer in Aristophanes' *Thesmophoriazousai*.

The suggestion that this inscription seeks to represent — successfully or not — the accent of another dialect, perhaps Boeotian, seems to be supported by the available evidence. Except for the unwritten ο of μακως (which I take as an oversight) and the α for η in κα, the inscription taken this way is consistent. No other explanation has been forthcoming for the strange forms, and it seems a modern conceit to label such an inscription "miswritten" when our comprehension (or lack thereof) — especially in the case of a painter like Euphronios who is otherwise precise — is probably due more to an imperfect understanding.

The *skolion* verse-scrap preserved on this amphora is not a quotation from an extant Sapphic poem, although it does express a closely related thought with similar vocabulary. Again, however, the extant literary tradition, even if it were complete, would only be a record of one performance in what was surely a long string of performances both by the author and by her circle and her imitators. This verse-scrap may be the product of one of those imitators.

---

129 Threatte (1980), 453, 38.012(b).
Epiktetos, Kylix in Malibu, Getty Museum S.80.AE.252; Para 329.83 ter (ex Bareiss).

Epiktetos was a painter active from the late sixth century to the very early fifth century. A younger contemporary of Oltos, and of Andokides (for whom he painted a calyx-krater\textsuperscript{131}), Epiktetos worked near the end of the period of the Pioneers mainly in red-figure technique but also on bilingual cups, which are among his earliest work. For Boardman “his black figure shows a sureness and a discipline which few practitioners of the old technique could still muster; his red figure an exquisite balance of line and detail, with restrained use of colour and pattern.”\textsuperscript{132} Epiktetos signed his name as painter frequently, and his inscriptions are mostly of this sort, in addition to potter’s signatures and kalos names; his later vases show name inscriptions (i.e. without kalos), and epoiesen and egraphsen without expressed subjects. There are few long inscriptions connected with Epiktetos.\textsuperscript{133}

A tondo scene in the J. Paul Getty Museum, previously in the possession of Walter Bareiss, portrays a balding bearded symposiast playing the chelys-lyre and singing (fig. 4.1). He is seated on a kline, his back resting against a bolster; his himation covers his legs. The inscription emerges from his mouth orthograde ΕVOИEΩΣΕN. These letters have been previously mistaken either as a misspelt epoiesen or as a nonsense inscription.\textsuperscript{134} In fact, Epiktetos, who is generally a neat and precise letter-writer, has recorded here a skolion verse-scarp: ΕVOI | ΕΟΣ | EN. Although there is only one way to divide the inscription into word units sensibly, there are several ways to interpret each word. The possibilities are outlined in the table below:

\textsuperscript{131} Villa Giulia, from Cerveteri, \textit{ARV} \textsuperscript{a} 77.90.
\textsuperscript{132} Boardman (1975), 58.
\textsuperscript{133} Immerwahr (1990), 62.
\textsuperscript{134} Immerwahr (1990), 62.
Table 1: Possibilities of Interpretation: Malibu S.80.AE.252

<table>
<thead>
<tr>
<th>EVOI</th>
<th>ESOI</th>
</tr>
</thead>
</table>
| ἐω | ἐοι | Day (Eos); nominative
| Ἐως: | Ἐος: | at dawn, in the morning, genitive
| Ἐο (Ep. Ἐος): | Ἐο | until
| EN | ἄρ, ἄρ (ἄρα), ἄν |

In many of the representations of singers and their songs (the inscriptions) on containers, the letters emerge from the close vicinity of the singer's mouth in the direction the singer is facing. That is, if the singer faces left, the letters emerge retrograde; if right, they are orthograde. This vase by Epiktetos, as do all others examined in this thesis, demonstrates this convention: the letters are orthograde, and follow closely the line of the tondo border, a simple reserved band. The first four letters, which are placed between the singer's head and the left (closest) arm of the seven-stringed chelys-lyre, form EVOI = ἐωι, the bacchanalian shout. Not inappropriate in the context of a symposium, the use of this exclamation is further reinforced in the scene by the appearance of the singer; the singer has a distinctly satyr-like appearance, although he is clearly a man since he lacks satyr ears. This resemblance becomes especially clear when Epiktetos' human faces are compared with his satyr faces. This face seems a hybrid of the two kinds, with human ears but a distinctive satyr nose and a full beard; many of Epiktetos' satyrs are also bald in the same way as this particular figure. The existence of the iota may have been disputed, but it is quite certainly

---

135 A rounded nose, slightly upturned (what would today be called a 'snub-nose', I think) with a prominent nose ridge indentation. Epiktetos' 'human' noses have a straighter, almost flat, nose ridge and tend to be quite long from the top of the nose ridge to the tip of the nose, which, although slightly rounded, could never be called "snub". Cf. figs. 4.2-4.5.

136 Although cf. London E37. Could this be the same man? This is, of course, typical male pattern baldness.

137 Beazley, Para 329.83 ter does not read it; Immerwahr (1990, 62) seems to imply that he does when he states that it may be a miswritten epoiesen (e.g. epoiegesen = epoiesen). The second letter is definitely not a pl.
there, painted just under the crossbar of the lyre. Of course, I have not handled the vase, but the marking under the crossbar is certainly not a spall (cf. the small spall immediately to the left of the iota), and has the same colour as the rest of the lettering (which seems to be applied red), rather than the lighter colour of the unslipped clay. Kilmer, who has handled the vase, confirms the iota. Epiktetos may have preferred not to separate the iota of EVOI from the rest of the letters, in order that the word might be more recognizable. The last two letters, EN, form the last word, Ἐν = 3rd person singular imperfect active, or present subjunctive, of ἐμι sum. or Ἐν = ἐν, or even ἐν.

The middle word, ΕΟΣ, must be the key to the phrase, since, as I stated above, it influences the the reading of EN. If the inscription is read as it was written, a smooth breathing might be understood, that is Ἐνος (or Attic ἑνος = dawn), and we have a mention of the morning: “Euo! Dawn was...” or “Euo!! If dawn ...”. Dawn (Eos) is seen occasionally in archaic poetry; it is most frequent in the poetry of Sappho where it is of course in its Ionic form, ἑνος.\(^\text{138}\) However, it is always accompanied by the epithet ἐνοςτηνουσις, and usually appears at the end of a line, after the appropriate epic epithet; it is thus unlikely to be Dawn in the nominative here. It may be, however, that ΕΟΣ represents the contracted form of the singular genitive Ἐνοδος, which can mean “at dawn”, or “in the early morning”.\(^\text{139}\) In this case the verse might mean: “Euo!! If at dawn ...”\(^\text{140}\) (if EN is the conditional) or “Euo!! At dawn he/she/it was...”. О for the suprious diphthong OV is standard in this period on vases and in other, more formal, inscriptions on stone.\(^\text{141}\) On the other

---

\(^{138}\) Mimn. 12.3.10; vid. Ibyc. 289; Sapph. 103.13, 104(a)1, 123, 157; Anacreont. 55.20.

\(^{139}\) See Threatte (1980), 350-51, 21.011 for O = OV.

\(^{140}\) Ἐν, if used as a conditional, would stylistically be more appropriately placed at the beginning of the conditional clause (unless preceded by an adverbial modifier like ἑνος, see below), even in verse, and would usually be followed by ἐλ (cf. Thgn. 35, 186, 211, 509, 929, etc...) I suspect that drunkenness might affect style (it certainly affects mine, verbal and otherwise), but drunkenness at symposia was not obligatory — although tipsiness might have been — and was not likely at the time of composition or rehearsal of a skolion or at the commissioning of a vase.

\(^{141}\) See the discussion in Threatte (1980), 238-41, 13.00-13.01.
hand, $\varepsilon \omega \varsigma$ might represent $\dot{\varepsilon} \omega \varsigma$ = "until", with the usual rough breathing marker $heta$ omitted. Sporadic omission of $H = [h]$ is not rare in Attic script,\(^\text{142}\) (cf. above, the tripod-pyxis of Amasis already examined, $\text{ELIO\Sigma}$) and there are examples in the inscriptions of painters contemporary, or very near contemporary, with Epiktetos. For example, Euphranor writes ($ARV^2$ 15.6) $\text{V\Phi\Sigma\EIVL\E}$ and Oltos ($ARV^2$ 53.1) $\text{ELEN\E}$.\(^\text{143}\) Concerning the omission of $heta$, Threatte writes:

The sporadic omission of $H = [h]$ in texts in Attic scripts probably indicates that the $[h]$ in Attic was only gently sounded; later orthographic practice does not support the view that Attic became psilotic\(^\text{144}\) so early. The increase in the number of cases which avoid $H = [h]$ after 450 and the appearance of a few texts in Attic script which avoid it altogether might be in part due to increasing familiarity with the Ionic writing system.\(^\text{145}\)

There are no longer inscriptions of Epiktetos with which this inscription can be compared; Epiktetos' use of $heta$ in other inscriptions, all proper names, does not necessarily exclude the possibility of the omission of $heta$ here.

The possibilities of interpretation, then, are $\varepsilon \Omega \Sigma = \dot{\eta} \omega \varsigma$, $\dot{\varepsilon} \omega \varsigma$ "dawn" or $\dot{\eta} \dot{\omega} \varsigma$ "at dawn" or $\varepsilon \Omega \Sigma = \dot{\varepsilon} \omega \varsigma$ "until"; $\text{EN}$ might be $\dot{\eta} \nu$ "he/she/it was" or $\dot{\eta} \nu = \dot{\varepsilon} \omega \nu$ "if" or $\dot{\varepsilon} \nu$ "in". The reading of $\varepsilon \Omega \Sigma = \dot{\eta} \dot{\omega} \varsigma$ is possible, and the form is seen often in epic and prose.\(^\text{146}\) $\varepsilon \Omega \Sigma = \dot{\varepsilon} \omega \varsigma$ is equally possible, if we assume an omitted $heta$. $\text{EN}$ could be any one of the three possibilities outlined above (Table 1).

\(^{142}\) See the discussion in Threatte (1980), 493-506, 42.01ff.
\(^{143}\) More examples are discussed in Immerwahr (1990), 142-43. He links this trend to the Ionic influence, which may also be seen in $\dot{\eta} \nu$ (an Ionic and early Attic contraction of $\dot{\varepsilon} \omega \nu$, cf. Smyth (1984), §2283).
\(^{144}\) Psilosis ($\dot{\omega} \dot{\omega} \nu \nu$) is properly a grammatical term for the substitution of a tenuis ($\kappa, \tau, \lambda$), or in this case the non-aspirated vowel, for an aspirate.
\(^{145}\) Threatte (1980), 494.
\(^{146}\) Cf. $LSJ$ s. v. $\dot{\eta} \dot{\omega} \varsigma$. 

The relative paucity of long inscriptions for Epiktetos, although no painter can really be considered to have many, makes it difficult to assess the subject matter and letters in comparison with other Epiktetan inscriptions. In particular, it would be very useful to compare Epiktetos’ use of heta in words other than proper names\(^\text{147}\) with the inscription found in this tondo. Likewise, the lack of a possible parallel from the surviving literature renders a definitive interpretation impossible. However, the inscription read ΕΥΟΙ | ΕΟΣ | ΕΝ “ειοῖ · έώς ἕν” seems most attractive to me, in which case it might mean “Euo! At dawn he was ...”, since it forms the first elements of an iambic trimeter — a common metre in comedy (where ειοῖ is also found\(^\text{148}\)) and also in the surviving satyr play of Sophokles\(^\text{149}\) (a genre which the appearance of the singer might bring to mind).

\textit{Kleophrades, Calyx-Krater in Copenhagen National Museum inv. 13365; ARV² 185.32; Para 340; Add 187.}

The fragmentary krater by the Kleophrades Painter\(^\text{150}\) in the National Museum, Copenhagen (inv. 13365), which appears to picture Anakreon and his boon companions at a symposion and komos, preserves several inscriptions, one of which, it has been suggested, is a skolion verse-scrap (figs. 5.1-5.5). Enough of Side B remains to identify the activity of the scene, at least; side A, on which the inscription in question is painted, is somewhat better preserved.

Side B (fig. 5.1) shows a komos. A popular topic on vases of this period, this scene is most remarkable for its apparent portrayal of the poet Anakreon in komos with his boon

\(^{147}\) Hipparchos is a favourite kalos name of Epiktetos; Epiktetos also painted for Hisychlos Potter.

\(^{148}\) Ar. Lys. 1294; Th. 993; Ec. 1181. Cf. also West (1982), 88-90.

companions. The lowest remaining fragment of the scene figures the feet and legs of four komasts walking to the right. On the far left all that remains of one of the four is the very bottom of the sole of the forward foot. Of the next figure slightly more remains: the front — to the top of the ankle — of the back foot, the front foot and its leg to the knee, and the bottom part of a chiton. This lower body appears to belong to the figure playing a ?five-stringed lyre, held at an angle of about 45°, 151 on the upper arm of which is painted ANAKPEI. . . in applied red. 152 The musician holds plectrum at the ready in his right hand, while he damps the third string from the top with his thumb and forefinger. 153 Between his chest and the lyre remains one letter in applied red, A[, . . . The inscription on the lyre arm must have read ANAKPEON (or perhaps ANAKPEONTOΣ "Anakreon's [lyre]" 154); the other inscription may possibly have read ANAKPEON also. Between the second and third komasts hangs a basket, the extreme bottom of which remains; Beazley suggests that the basket is suspended from the lyre. 155 Of the third komast from the left both legs to the knees remain, as well as the drapery of his chiton; only the end (or beginning, see my note 176) of his name remains . . . Σ. The final figure strides quickly forward (or perhaps is skipping), his back leg lifted up and back so that it would appear that his foot (hidden behind the drapery of the third komast), does not touch the ground. Only a small portion of this third komast’s leg and a curve of the chiton remain. Another group of fragments — which Immerwahr notes have been joined to the palmette group at the right of the scene — preserves the right shoulder and head of this komast (fig. 5.4). He is a blond-bearded man carrying a parasol. Draped around his shoulders is a vine garland. He wears the sakkos and earrings which, together with the parasol, connect this scene with a series of scenes on red-figured vases portraying

151 This is quite normal, although in some komos scenes the barbitos is tipped even further to 60-90° from the vertical (Maas & Snyder, 1989, 122).
152 Beazley, ARV² 185.32.
153 This action is explained by Maas & Snyder (1989), 122.
154 Serving both as owner-inscription on the lyre, and as identification of the figure as Anakreon himself. There is sufficient room on the arm for all of the letters (see the hypothesized reconstruction, plate XII).
Anakreon and his boon companions dressed in luxurious and exotic clothes. His head is thrown wildly back, and eyes wide he sings I000. "These are not letters, but a conventional rendering of the sounds of music". In fact, as Kilmer suggested to me, iō is a perfectly acceptable Bacchic exclamation found in dramatic and lyric poetry. It is used with other interjections, and in particular with o. In Sophocles' OC at l. 224 we have iō o o — which would be written I000 in Attic script at the time of this vase. This inscription is not musical notation, but an exclamative cry, a bacchic shout.

Side A (figs. 5.2-5.3) shows a symposion scene, perhaps one just before or just after the komos on side B. For the fragments on this side also preserve the head of a symposiast wearing a sakkos, and the legs of another symposiast wearing a chiton identical to those of side B. Unfortunately, nothing but the sakkos remains. "Il s'ensuit de la position du kékryphalos que ce personnage tournait la tête vers la droite, regardant en bas." On the wall above this symposiast, who would appear to be the focus of the scene (he seems pretty much midway between the two palmette groups) hang a food basket and a skyphos. To his right stands a flute-girl, facing right, head modestly covered with a fold of her himation, but wearing a very transparent chiton which leaves little to the imagination. A fragmentary retrograde inscription ...Κ(Β)ΕΔΕ, which

155 Caskey & Beazley II (1954), 57.
156 See Kurtz & Boardman (1986).
157 Immerwahr (1965), 152, where he refers us to E. Pöhlmann (1960), Griechische Musikfragmente (Erlanger Beiträge 8), 84, nos. 1 and m and Graef-Langlotz, Die ant. Vasen v.d. Akrop. 2, no. 546, which shows a series of N's.
158 pers. comm. As a bacchic shout it is found in Eur. Ba. 578 "iō Bαργαίαν".
159 LSJ s.v. iō, 847, col. 1.
160 Another figure named ALKAIΩΣ sings something similar on a kalathoid vase in Munich: OOOO. Perhaps then this is a series: o o o o, but the portrayal of Alkaios does not lead me to interpret this as a bacchic shout — he looks far too somber. Perhaps it is a cry of dismay. On the other hand, it may simply be a representation of sound.
161 Johansen (CV (Denmark 8), 259.
162 Immerwahr (1965), 153; Beazley read the inscription BEVE; but there is no name recorded by Osborne ending with these letters in Attica (vol. II) or the Islands (vol. I). Στραβόν (ΣΤΡΥΒΕΩΣ) is the only name possible (again according to Osborne). It is only Attic, found three times, twice in the fourth
Immerwahr places “vertically and upward to the right of the bit of design to the right of the kylix” but which Johansen claims “était placée verticalement à droite de la joueuse d’aulos”\textsuperscript{163} must be a name label for the female aulist. On her right a symposiast seems to have reclined next to the palmette group, the rightmost figure in the scene. All that remains are the tips of the fingers of his left hand, which support a huge Type C kylix, only half of which survives. On this half is painted AIPE, starting from the visible handle (the left), orthograde. We should accept the suggestion of M.-L. Buhl mentioned by Immerwahr that a chi be supplied at the beginning of the word, making it the common greeting found on cups: \textit{χαῖω} or \textit{χαῖπες}.

\textsuperscript{164} A longer inscription seems to be needed to match the enormous size of the kylix; since the break in the fragment occurs at least at the stem, the inscription, perhaps portrayed as circling the cup completely (this would explain the missing \textit{chi}), may even have been \textit{χαῖω καὶ πῆει} or some similar greeting found on many of the Little Master cups.\textsuperscript{165} What appears to be the tip of a bent elbow, perhaps bent in the posture of song\textsuperscript{166} (since he seems to be accompanied by the flute-girl), probably belonging to the same figure, remains on the next joined fragment which, because of the palmette, must finish this scene on the right. A lost fragment\textsuperscript{167} shows a rear view of a \textit{kline} which is supposed to belong to this symposiast. The tops of the post-legs, a striped cushion and the folds of a himation are preserved. This symposiast

---

\textsuperscript{163} Immerwahr (1965), 153; Johansen (CVA Denmark 8), 259. The photographs do not help at all since, as Johansen writes, the inscription letters “subsistent en haut peintes en rouge fortement décoloré sur le fond noir.” (CVA denmark 8, 259) Surely Johansen, who probably handled the piece himself, must be correct; Immerwahr based his observations on photographs provided by the National Museum in Copenhagen and on the older ones of the German Archeological Institute in Rome. If it is adjacent to the flute-girl, it is probably the end of her name.

\textsuperscript{164} Immerwahr (1965), 154. For example, XAIPE ΣV is found on the tondo of London E41 (ARI\textsuperscript{2} 58.51) attributed to Oltos (or perhaps early Euphroniois, cf. Immerwahr (1990), 61, no. 337).

\textsuperscript{165} Although Immerwahr (\textit{loc. cit.}) does mention the possibility of \textit{χαῖω} and \textit{χαῖπες}, he does not seem to think that the inscription may have been longer than one word.

\textsuperscript{166} The point of the elbow is not too high to portray such a posture; cf. the height of the elbow on the lyre-player to the left. But the position of the symposiast suggested by the lost fragment, if it belongs to this krater, would make this a highly unusual posture, although not impossible.

\textsuperscript{167} Inst. neg. 35.2053 de l’Institut archéologique allemand de Rome. From CVA Denmark 8, figure p. 259.
would then have been portrayed from the rear, with his left arm outstretched holding the *kylix* and his right arm bent in the singing position, if indeed the rounded tip on the upper fragment belongs to an elbow. On the left side of the scene reclines a symposiast on his *kline*; he has drawn his legs up in a familiar position. He wears garments similar to the komasts on side B. Holding a chelys-lyre, he must be cupping his head with his elbow, which is bent in the singing posture. He may share a *kline* with the symposiast who wears the *sakkos*.

Above this *kline* is the inscription . . . ΕΝΙΕΣ retrograde; Immerwahr remarks that “[@]ενιες and [@]ενιες are the most likely restorations.” Beazley’s suggestions, “[@]ενιες, or rather [Κ]ενιες,” he dismisses as unlikely. Rather, he suggests that this inscription is a snatch of song. Confining himself to the Theognidean collection, he cites a possible parallel for the reading πενίνις in Theognis 1129ff:

> Ἐμπίπτωμαι πενίνης θυμοθθαρον οὐ μελεταίνων
> ὁδῷ ἀνδρῶν ἐχθρῶν, οὐ μὲ λέγωντα κακῶς.
> ἀλλ' ἔθνων θραυσάμοι, ἤ μὲ ἐπέλεψε,
> κλαίω δ' ἄγαπην γῆς ἐπερχόμενων.
> I drink, not fearing spirit destroying poverty
> nor my enemies, who abuse me in speech.
> But I mourn lovely youth, which is leaving me,
> and I bewail the approaching pain of old age.

He correctly rejects several other options for both πενίνις and ξενίνις on the grounds that the placement of the word should be as close to the beginning of the line as possible, since, in all likelihood, the inscription is intended as the title of a song. This is a probable conclusion, and

---

168 See below p. 60, nn. 185-86.
169 Immerwahr (1965), 153.
170 ART* 185.32.
171 See Immerwahr (1965), 153.
one which is borne out by the other examples of *skolia* verse-scrap discussed in this thesis. I do not believe, however, that this inscription is a verse-scrap.

As Immerwahr suggested, the verse-scrap inscriptions seem to be intended to bring a poem to mind by quoting the first words, that is, the title of the poem. The other attributable verse-scrap inscriptions do in fact record the first words (whether a variant reading or not) of a particular poem from the very first word. This example, however, does not if Immerwahr’s suggested attribution be accepted; it records the second word of the line only. This single word alone could not have been enough of a clue to the viewer as to the particular song intended, since, as Immerwahr has pointed out already, *mevriq* occurs 3 times at least in Theognis alone, without mention of other poets. Immerwahr notes that “the number of letters missing at the beginning is uncertain, since the spacing was no doubt irregular, with the beginning written more closely,” even so, there would not be enough space for more than a few letters, unless they were placed very closely. But the placement of the existing letters does not support this possibility: they are quite widely spaced, if somewhat irregularly. The inscription must have started somewhere within the missing fragment between the E to the left and the skyphos to the right; the skyphos, the food basket and the large kylix occupy the rest of the scene at the level of the inscription, making it unlikely that an inscription could have continued there at one time, and has now faded or been rubbed off. In addition, for all of the verse-scrap *skolia* preserved on containers an effort had been made on the part of the painter to attach the letters visually to a singer such that the letters seem to be issuing from or about his mouth. This is probably not the case here, since — judging the posture of the

---

172 A long tradition in antiquity.
173 Immerwahr (1965), 153.
174 Immerwahr’s suggestion (1965, 153-54) that the attribution thematically matches the scene should be pointed out. But as we have seen most of the Theognidean collection was probably intended to be sung at *symposia*.
175 Immerwahr (1965), 153.
singer to be "standard" because of the position of the bent elbow — the position of the mouth would likely have been close on the crook of the elbow, and would therefore require the inscription to take a sharp right angle turn downwards; this restricts further the space available for letters.

The other inscriptions on the black ground are similarly painted in red and, with the exception of the musical imitation/notation sung by the parasol carrier on side B, seem to be remnants of names (the A of Anakreon; the Σ which seems to be labeling the third komast; the . . .) BEΔΕ which seems be labeling the flute-girl); all of these are probably vertical upwards inscriptions\(^{176}\) — on the analogy of BEΔΕ and the A of what must be ANΑΚΡΕΟΝ — labeling standing figures. The . . . ]ΕΝΙΕΣ, rather than part of a skolion, is more likely a label for the seated singing symposiast, perhaps even [KL]ΕΝΙΕΣ as Beazley originally suggested, which needed to be written on a horizontal plane, since, its subject raised from the ground and crowded onto a kline with another symposiast, it would not fit into the scene vertically.

If the inscription is reconstructed KL]ΕΝΙΕΣ, it is the Ionicized form of the Attic name Κλεωνιας written in Attic letters. The last vowel, E for eta, is very common on Attic vases of this time, and poses no problem. E is also used at this time to represent the spurious dipthong EI.\(^{177}\)

Thus we have an Ionic name-label, spelled in Attic letters. At least two other Ionicized options are possible: Μηρίς (ΜΕΝΙΕΣ), and Ξενίς (+ΣΕΝΙΕΣ).\(^{178}\) Of these two Ξενίς "foreigner",

---

\(^{176}\) Of course a single sigma — which can be orthograde or retrograde — could be the start of a name or the last letter of the extremely common . . .ΩΣ nominative masculine ending, making that inscription a vertical downward.

\(^{177}\) Cf. Threatte (1980), 299-301, 16.01.

\(^{178}\) Ξενις (or rather +ΣΕΝΙΕΣ) is found in Athens in the third century BC (ib II\(^2\) 6842), and Ξενάδης c. 405-400 BC (of the Cholleidai IG II\(^2\) 4548); Ξενος is found twice in Athens in the fifth century BC (ib II\(^1\) 1040,5; of the tribe Erechtheis in 459 BC IG II\(^2\) 1147,72 Ξι(ε)νος) and once in PCG 4, 298, fr. 361. Μηρίς (ΜΕΝΙΕΣ) is found in Athens in the fourth century BC (IG II\(^1\) 1952 and SEG XV 129,51). See Osborne & Byrne (1994), s.v.
although it is a late name (4th and 3rd B.C., but see n. 172, +ΣΕΝΙΟΣ) in inscriptions, fits the context of the scene best. This interpretation of the inscription ΕΝΙΕΣ satisfies the observations already made concerning the verse-scrap skolía examined, namely that they all begin a verse from the first word, probably as a title. It also is consistent, as far as we can determine because of the fragmentary nature of the calyx-krater, with the other inscriptions on the container itself which all seem to be name labels. Furthermore it suits the context of the scenes on the vase. Anakreon was Ionic himself, and his style of dress decidedly eastern; by labeling the reclining symposiast “foreigner” with the Ionic version of his name, if he was Attic, in Attic script, the artist reinforces the non-Attic nature of Anakreon and his circle.

Onesimos, Kylix in Munich, Antikensammlungen 2636; ARL² 317.16; Add 106.

A cup by Onesimos in Munich preserves another verse-scrap skolion (fig. 6). A youthful symposiast, reclining but with legs tucked in\(^{179}\) on a patterned bolster sings ΚΙΑΛΟΙΕΙ. He and his aulos-playing companion are seated on the lower border of the scene on Side B. Between them, and to each side, hang baskets, each with five tassels. The singing youth draped carelessly with his himation is holding a laurel twig between the thumb and forefinger of his right hand, in much the same way as the symposiast on Florence 3949 (that is, with the tip pointed back and the branch nearly horizontal, see fig. 1.8.1). His left hand is half-raised, as if to provide emphasis, or perhaps balance; it is not resting on his left leg. He gazes straight ahead, his head more or less level (not tilted back). His companion, the musician, is covered somewhat more discreetly by his own himation, and is playing a diaulos with apparent gusto.\(^{180}\) Both are garlanded with laurel.

\(^{179}\) Jacobsthal discusses this pose in detail (1912, 44-51).
\(^{180}\) The angle of the pair of aulos is quite wide. Similarly on British Museum, GR 1895.5.13.1 by the Foundry Painter (fig. 10.1).
Although the inscription Κ[ΑΛΟΣ]ΕΙ, καλός et “you are”181 beautiful” is quite common on vases of this period, and frequently seems to be a comment on a figure in the scene (in the same manner as some kalos-names), this fragment is clearly intended to be understood as song or, perhaps, recitation. It emerges from the youth’s mouth retrograde, apparently following the line of his upper arm to the up-turned forearm, and then continuing along the same trajectory on the other side. The presence of the myrtle twig may indicate that this is an example of the “capping” skolion, but it is impossible to demonstrate such a claim conclusively. In any case, the existence of “capping” before Aristophanes cannot be proved with any degree of certainty, and it may be that the myrtle twig was also used in other circumstances (see discussion above).

Brygos Painter, Frr. in Paris, Cabinet de Médailles 546; ARV² 247.23; Para 365; Add 225.

Three fragments of a symposion scene by the Brygos painter preserve another skolion, which brings to mind the skolion inscription of the fragmentary calyx-krater by Euphronios. Beazley places these three fragments (Ω) with three others (Α), also in the Cabinet des Médailles, Paris, under “Cup 1” (probably a type B182) in his article “Brygan Symposia” in the Festschrift for D.M. Robinson.183

Group α shows two revellers, reclining on separate kline.184 The leftmost, a youth, has turned back to look at his neighbour, hands lifted in front of his chest; his mouth is open, as if in speech. He reclines, or perhaps is semi-seated,185 on a striped and ribbed bolster. His neighbour to

---

181 Epic and Ionic sg. eipai sum, LSJ s.v. eipai.
182 Beazley (1953), 76.
183 Beazley (1953), 74.
184 A kline post separates the two symposiasts.
185 He seems to rest his left arm on what may be his knee (a small rounded line close to the edge of the fragment). If that were so, it might explain the almost frontal aspect of his upper body. Similar semi-seated positions are found on other vases. cf. Jacobsthal (1912), 49-52.
our right is holding out a large Type C cup in his left hand. He also seems to be semi-seated, or at least reclining with his legs tucked up under him.\textsuperscript{186} On the wall between them hangs a sheathed sword, with a baldric drawn in applied red.

Group \(\beta\) (fig. 7.1), on which is preserved the *skolion* fragment, also shows two symposiasts. Only the left shoulder and part of the neck of the leftmost symposiast has survived; this symposiast (a youth?) also leans on a striped and ribbed bolster, but one which has a slightly different piping decoration. On the wall between him and the singer hangs a shield with a raven device, from which also hangs a pair of greaves. The upper torso, right arm and head are all that remain of this particular symposiast, just enough to recognize the usual singing position. His arm seems to be wrapped completely around his head, and his fingers cradle his head from behind. From his open lips come the letters: OΠOLON,\textsuperscript{187} ὀμαλον “O Apollo”. Unlike some other inscriptions (BM 95.10-27.2, Munich 2646), the letters are painted continuous over the arm itself, rather than being split by the crook of the elbow. The crasis of ὀ and an initial α is not an unusual one.\textsuperscript{188} Unlike the innovative geminate lambda of the first example from Euphronios, there is a single lambda here; the single lambda is an acceptable late archaic convention.\textsuperscript{189} It may be that these fragments record the same *skolion* (a hymn in praise of Apollo); it may, however, be equally the case that this is another *skolion* entirely.

\textsuperscript{186} The end of his bent knee nearly touches the post of the next *kline*. This is another common position, cf. Jacobsthal (1912) *loc.cit*. For types of klinai in vase-painting see Boardman in Murray (1990), 122-131. Usually there was a post at one end of the *kline* which was higher than the other. The symposiast would recline on this higher post, often with a bolster for comfort. London E68 (my figs. 8.2-8.3) portrays this type of *kline* clearly.

\textsuperscript{187} Not OΠOLΩN (with an omega) as reported in Csapo & Miller (1991), 381, n. 7.

\textsuperscript{188} For examples cf. Beazley (1953), 75, n. 6. The crasis ὀμαλον is seen once, but in a variant reading (Μ in A. Α. 1073 "ὠμαλλον, ὀμαλλον"). Some of the earliest examples of crasis with ὀ are found in Anacr. 2.1 (ὠμαλλον) and Alc. fr. 72 Lobel (ὠμαλλον).

\textsuperscript{189} But see KΑΛΛΙΣΤΟ on London E68 (fig. 7.2).
Brygos Painter, Kylix in Florence, Museo archeologico Nazionale 3949; ARV² 376.90.

Another red-figured cup (fig. 8.1), attributed to the Brygos Painter by Hartwig, dated to the early fifth century, preserves the inscription ΠΙΛΕΚΑΙ, ἀγάπη καὶ "love and...". A youthful garlanded symposiast reclines on a kline, leaning on his left elbow on a striped and ribbed bolster; his elbow is wrapped in a fold of his dotted himation. In his left hand he holds a black skyphos, while in his outstretched right hand he holds, between thumb and forefinger, a twig of myrtle. The branch is tilted back towards the singer, and extends slightly into the meander border. Between the singer's hand and his head, which is tilted back, runs the inscription framed on the bottom by his arm, and on the top by the twig. Beneath the kline sits a pair of boots, while a walking stick leans against the border; on the wall hangs a food basket.

The Brygos painter commonly uses pi to represent what would normally, in Attic Greek, be a phi. Cambitoglou makes much of this particular use of the pi on another cup by Brygos (London E68, figs. 8.2-8.3) in an effort to determine the origin of the Brygos Painter, supposing that this spelling is a phonetic clue:

The spelling of our artist's name and the use of PI instead of PHI in the names inscribed on the London cup point toward a non-Greek origin of Brygos and suggest to me that the potter and painter were one and the same person, an émigré living in Athens rather than an Athenian by birth.

---

190 Hartwig (1893), 320.
191 The meander pattern appears to have been started at a point very close to where the kline touches the border on the right: the pattern at that point had to be completed with an irregular addition.
192 He follows a suggestion made by Kretschmer (81, para. 48) that this lack of aspiration is reminiscent of the Scythian archer in Ar. Th. This archer, however, consistently mispronounces aspirates.
193 Cambitoglou (1968), 11.
Cambitoglou counters a suggestion made to him by Immerwahr\textsuperscript{194} that the Painter has used the unaspirated form on London E68 in order to suggest the drunkeness of the symposiast, by correctly pointing out that the inscription in question (ΠΙΛΙΠΟΣ) is in all likelihood a label, and not speech. But in answer to Immerwahr's further observation that other aspirates are used correctly by the Brygos Painter (for example ἩΤΙΕΡ Σ, ΑΝΔΡΟΜΑ+Ε, ΑΣΤΡΑΝΑ+Σ, and particularly the satyr ΛΕΦΣΙΣ on the exterior of London E65), Cambitoglou rashly comments: "Is not such inconsistency of pronunciation and spelling however characteristic of a foreigner?\textsuperscript{195} In fact, the Brygos Painter seems to consistently represent initial and intervocalic phi with the letter pi.\textsuperscript{196} This peculiarity of spelling might be understood as a type of foreign accent on the part of the painter, but only under the very specific circumstances of a name-label or words attached by one particular painter to one particular figure.

The meaning of the inscription itself is clear, however: "Love and ...". This is clearly an exhortatory skolion of the sort observed by Giangrande (his A); similar commands are "spoken"\textsuperscript{197} by many Little Master cups. Another "command" inscription is found on a cup by Oltos in Madrid (Madrid 11267), ΠΙΝΕΚΑΙΣV, "you drink too" which is spoken by a woman to her aulos-playing companion, also a woman.\textsuperscript{198}

\textsuperscript{194} Cambitoglou (1968), 11, n. 37.
\textsuperscript{195} Cambitoglou (1968), 11.
\textsuperscript{196} Cf. the labels (not love-names; Cambitoglou (1968), 11) ΠΙΛΟΝ, ΔΙΠΙΛΟΣ, ΝΙΚΟΠΙΣΕ on the exterior of London E68 (figs. 8.2-8.3).
\textsuperscript{197} That is, dipinto on the rim or foot of the cup in the form of a command, usually of the sort ζαίπε καὶ μὴ, "Hi! Have a snort!" (loosely translated).
\textsuperscript{198} Although tempted, I cannot include Madrid 11267 among the skolia, despite the presence of a musician, since the position of the speaker is not at all that of a singer, and since the inscription makes much more sense as a spoken phrase (the speaker extends a cup to her mate with her left hand — her right holds her own cup).
The presence of the laurel branch, based on the conclusions reached from our literary sources, might indicate that this is an example of “capping”; the singer in this scene may soon pass the twig on to a fellow symposiast. There is, however, little evidence to prove this suggestion in the scene (likewise above, the cup by Onesimos) since no other symposiasts are figured, although that does not exclude their “presence” in the mind of the painter and of his “reader”. It may be that the singer holds the myrtle twig, as suggested by Dickey in reference to the Scholium on Wasps 1239, for self-assurance. I have asserted that this symposiast is a singer because of the position of his head: it is in the already familiar pose seen on other vases. The right arm cannot cradle the head, since it is occupied with the laurel branch. It is possible that this symposiast is chanting (see the scholium on Clouds 1364, above pp. 19-21) a form of performance called parakataloge. The singing pose elevates this performance from simple reciting to chanting. The metre (\( \text{uvu} \)), perhaps part of an iambic tetramer or trimeter) supports this suggestion, since, as West states, parakataloge is associated with Ionian iambus through its supposed inventor, Archilochos.\(^{199}\)

*Foundry Painter, Kylix in London, British Museum GR 1895.5-13.1; ARV\(^2\) 405.2; Para 370 and 371; Add 232.*

A cup by the Foundry Painter (figs. 10.1-10.3) in the British Museum preserves inscriptions which could allow for a wider interpretation of the common kalos inscriptions on certain containers. This kylix portrays the preparation for a komos on the exterior, and what may well be a rehearsal for this scene in the tondo.

The tondo scene (fig. 10.1) comprises two figures, a man, seated, and a youth, standing. The V-shape composition of the tondo is common to the Brygos Painter and his Circle. The

\[^{199}\text{West (1992). 40.}\]
bearded man sits in a very relaxed posture — left knee drawn up, clasped by his hands — and leans slightly backwards, his head tilted and mouth open. Between his left leg and his right arm leans his smooth walking stick. A himation is draped carelessly over his lap; his hair is bound in a red fillet. The youth leans on his knobbed walking stick. Himationed also, he too wears a red fillet. He wears boots. The youth is playing the dianulos with apparent gusto, head back slightly, auloi spread wide. His cheeks, unrestricted by phorbeia, are puffed out. Between them on the wall hangs a food basket, perhaps a sign that they are preparing to head out to dinner. Just above the level of the man’s mouth is the inscription ΗΟ ΠΑΙΣ ΚΑΛΟΣ, which may be an iambic metron. Dyfri Williams has already noted that “he may be supposed to be singing”. This scene may well preserve the practice session for a skolion (for this is likely not a symposion scene itself since the man is seated on a stool rather than reclining) which reaches full expression on the exterior.

Side A (fig. 10.2) portrays the beginning of a komos. A himationed reveller (largely missing) is stepping through an open doorway led by a naked figure crouching, and leaning on a stick. Kilmer has identified this figure as a female and describes the activity of the fragmentary scene:

In the London cup we have the female figure substantially complete: she bends to our right, knees bent, right foot a little forward of left, with part of her weight resting on a long staff. Note the woman’s hand on her right knee to help her keep balance. Her partner comes up from behind, his cloak open, probably held back with both arms. We see his right knee, shin and foot, and his advanced left leg: of the foot, only the tips of the toes remain. The male’s genitals would be too

200 Williams CVA Great Britain 17, (1993), 64.
201 Kilmer (1993), 37 parallels the use of the staff in this erotic scene to another erotic scene in a tondo by the Boot Painter (his R814: my fig. 10.4) where a staff is also used, apparently for balance.
high, and too far back, for actual copulation; but it is evidently about to happen.  

Kilmer compares the door in this scene with one in his R954 (London F65; my fig. 10.5) stating, “it is worth recalling the doorway in R954* as a common element if not a strict parallel.” Inside the house, a flute case and food basket hang on the wall. A youth, to the left, leans on his knobbed walking stick as he plays his *diaulos*; a *man/youth, largely missing, leans on his knobbed walking stick in the doorway. Along the rim of the kylix, starting from between the youth’s *auloi*, is the inscription ΗΟΠΙΔΙΣ ΚΑΛΟΣ. The “trajectory” of this inscription is impossible to determine since a large part of it is missing. But it does not appear from the remaining letters that these words were connected to a singer (i.e. the man in the doorway).

Four figures occupy the space on side B (fig. 10.3); the two stationary figures, a youth wreathed in ivy leaning on his walking stick, modestly covered in his himation, and a *diaulos* playing man wreathed in laurel. A small portion of a food basket may be seen on the right; the food basket shows us that the figures are still indoors. A naked woman wielding krotala dances next to another man. He, with himation draped over his head, dances also, leaning backwards, right leg bent and left leg slightly lifted from the ground. He too is wreathed in laurel. In his left hand he balances a large skyphos; his right hand holds a smooth walking stick. He bears a remarkable resemblance to the seated figure in the tondo. From his mouth also come the words

203 Kilmer (1993), 37. He also directs us to discussions of the symbolism of doors in Keuls (1985), but cautions against the too large scope of Keuls’ identifications.
204 In fact, all three scenes may be a progression in time from the tondo, to side B, to side A, and we might assume identity. The man and youth in the tondo are practicing for the upcoming symposion. Side B shows dancing and singing before the *kamos* and side A the beginning of the *kamos*. The possibility of a chronological progression of events on sides B and A is heightened when we examine the figures. Four on both sides, they also appear to be the same people. The men on side B are missing on side A, except for their feet. The youth, garlanded in ivy on both sides, stands in the same position on both sides (between the *aulos* case and the food basket). The dancer has acquired a walking stick and now leads the
HO ΠΑΙΣ | KAL[ΟΣ, orthograde, broken by both an aulos case hanging on the wall and the rightmost figure's head. This scene seems to portray the performance of the skolion seen in the tondo, especially if we assume identity between the figures (see n. 204).

We have on the tondo, then, and on side B, an example of a skolion verse-scrap ὅ παιζ καλάς. Along with ΚΑΛΟΣΕΙ on the cup by Onesimos in Munich and two others205, this cup represents an inscription common on containers of this period in an unusual way; the praise of a youth is accentuated by song.

Douris, Kylix in Munich, Antikensammlungen 2646; ArV² 437.128, 1653; Para 375; Add 239.

In the tondo of a kylix by Douris dating to c. 470/60 B.C.206 (fig. 11) a bearded symposiast, in the near-canonical singing pose, wearing a himation and a turban-like head-wrap, gazes towards the ceiling as he sings out a snatch of song. He reclines on a kline, supported by his left arm, his chest frontal, while his head, in profile, is tilted slightly back so that his beard is nearly horizontal. Part of his himation appears to be folded up and in use as additional support between his back and the striped and tasseled bolster. The singer also holds a stemless kylix (Type C) in his left hand. A young man accompanies the singer on the diaulos, without phorbē, cheeks puffed and rounded. Unshod, he also wears a himation, with the end draped up and over his left shoulder as if in a formal stance. Between the singer's kline and the aulist stands a table, beneath which is a pair of boots. A knobbled walking stick leans against the side of the stopt meander border, and a spotted diaulos case, complete with mouthpiece holder, hangs behind the stick from a

way on side A. As well as a temporal progression, there may well be a spatial progression, shown by the aulos case and the food basket: the scene has shifted towards the door.

205 Phintias, kylix fr., Athens Akropolis Museum 837, ArV² 25.3 ΟΠΑΙΚΑΛΕ. Epiktetes, kylix, London British Museum E37, ArV² 72.17 ΗΠΙΠΑΡΙΧΟ ΚΑΛ.

206 Hamdorf (1975), 56.
peg in the wall. The scene itself seems well-planned, with a ground line cutting a sectant across the bottom interior portion of the border. Despite the careful planning of the scene, the painter has lengthened the singer's legs quite out of proportion with the rest of his body (equestrian sports would not be an option for this man); in a certain sense, however, this lengthening does complete the scene on the horizontal plane, by leaving no empty space on the kline.

The inscription is retrograde, emerging from the reclining singer's mouth in a slight curve over the extended aulos: OV ΔVΝΑMOV “οὕ δύναμι σοι”. The first two letters are separated from the rest by their placement between mouth and bent elbow; this treatment of the negative οὐ is also seen on the “Douris copy” kylix in the British Museum (see below). The meaning of the inscription is not hard to decipher: “No, I cannot”; the repeated negative provides emphasis. The metre is probably dactylic hexameter, and this snatch of verse may be part of an elegiac couplet. The presence of the aulist reinforces this suggestion, since most modern scholars, with the exception of D. A. Campbell, agree that the aulos was used to accompany elegiac verse. This inscription has been paralleled by Schulze to Theognis 695.\footnote{207 W. Schulze, review of P. Kretschmer (1896), Die griechischen Vaseninschriften ihrer Sprache nach untersucht in Göttingische Gelehrte Anzeigen, 237. Citation apud Csapo & Miller (1991), 382.}

Οὐ δύναμι σοι, θυμέ, παρασχεῖν ἀσμενα πάντα·
τέλειθι· τῶν δὲ καλῶν οὐ τι σοῦ μοίνος ἔραξ.

I cannot provide for you, my heart, every suitable thing. 

Courage! You are not alone in loving gorgeous things.

Hartwig, however, paired this inscription, more appropriately I think, with Theognis 939.\footnote{208 Hartwig (1893), 258.}

Οὐ δύναμις φονητί λίγη· ἀειδέμεν ὄστερ ὁμοίων·
καὶ γὰρ τὴν προτέρην νύκτι ἐπὶ κώμου ἔθην.

I cannot sing with clear voice like a nightingale,

for last night I went on komos.
This attribution is more appropriate, although both couplets are equally likely material for sympotic poetry, since the elements of the scene may add significantly to the apparent subject of the couplet: the boots and the walking stick (and also the diaulos), while common additions to scenes of symposia, are frequently found in komos scenes also; they recall the komos past and anticipate the one to come. Douris may have included them in order to enhance the theme of the verse. They are certainly indications that this symposiast is a guest, and will be walking home. The verse-scrap records the first words of a poem.

A red-figured stemless cup provides another verse-scrap, inscribed after firing, which has been paralleled to a skolion fragment of Praxilla.\textsuperscript{209} The cup (London, British Museum 95.1-27.12), which was first registered in the British Museum, London in October of 1895 and labeled “an ancient imitation, in style and subject, of the work of Duris”\textsuperscript{210} and its inscriptions in particular have been most recently discussed by Csapo and Miller. The cup has, however, been a subject of debate for some time. The modern consensus concerning its place of manufacture seems to point to Attica.\textsuperscript{211} The cup itself has been stylistically dated to ca. 470-60 B.C.\textsuperscript{212}

The symposion provides the thematic material for the cup’s scenes. The tondo (fig. 12.1), a close-up scene, portrays two bearded male symposiasts wearing himations — the singer’s himation is worn over the left shoulder — who are sharing a kline. The kline itself is covered with

\textsuperscript{209} Cf. PMG 754 (Praxilla 8); Jacobsthal (1912), 62-3 following Wilamowitz; Hartwig (1893), 255; Herzog (1912), 18-19.
\textsuperscript{210} British Museum Registry for October 27, 1895 apud Csapo & Miller (1991), 368.
\textsuperscript{211} Csapo & Miller (1991), 369.
a decorated cloth, which brings to mind the coverlet which lies on the marriage bed in Catullus LXIV, 50-51:

haec uestis priscis hominum uariata figuris
heroum mira uirtutes indicat arte.\textsuperscript{213}

This coverlet, decorated with the olden shapes of men,
with wondrous art told of the glorious deeds of heroes.

One man is singing, while the other accompanies him on the \textit{diaulos}.\textsuperscript{214} At first glance, the singer adopts what appears to be the classic pose: right arm draped around head (or supporting head) while leaning on the left, chin raised with the mouth open to sing. This singer, however, has raised his arm, not to support the head, but to drape it across his forehead. I can see no other reason for this motion except for dramatic effect, if this was the exact pose on the unknown original.\textsuperscript{215} He holds an unidentifiable object (possibly a footless container, or more likely \textit{krotala}). The position of the aulist seems to convey an image of reclining also; he does not seem to be supported by anything, however, and playing the \textit{diaulos} in mid-sit-up would be a feat unparalleled in my experience.\textsuperscript{216} The toondo scene is framed by a reserved band.

\textsuperscript{213} Catullus 64.50-51.
\textsuperscript{214} Although only one pipe can be seen, the existence of the other is evident from the fact that the aulist’s other arm (the right) is raised, i.e. to play the second pipe. Also they are always played as a pair.
\textsuperscript{215} Of course, there is no way to be certain whether or not the copy is exact, but it would be hard to find a good reason why the copyist would change the pose in this way (unless the original were damaged in that specific area so that the placement of the arm in front of or behind the head should have been uncertain). All of the scenes I have seen with singers in a similar pose show the arm behind the head, and I find it hard to imagine that the copyist had seen no other examples of a singer in this position. I suggest, then, that the position of the arm in this way is intentional (either on the part of the copyist or “Douris”) and may be considered a dramatic detail. In a modern context, this gesture might indicate weariness or emotion (i.e. a “swoon”); in an archaic, probably Attic, context, however, the meaning of the gesture cannot be determined.
\textsuperscript{216} I did try this position with the modern recorder (which is considerably easier to play than the \textit{diaulos}, a double reeded instrument which generates a great deal of back pressure) and found that my ability to breathe in was severely hindered due to the flex of the abdominal muscles, because the ability of the diaphragm to expand was restricted. Even if one could draw enough breath before tightening the abdominal muscles, there would be no way to draw more breath without relaxing again. He does not appear to be leaning on his fellow-symposiast’s knees, which extend behind his back.
Side A (fig. 12.2) is another sympoision-scene, with three symposiasts each reclining on his own kline. Under or rather in front of each kline stands a table. From right to left, a shield, a turtle shell barbitos, a crossed-sticks(??) and a food basket hang on the wall. The symposiast on the right is preparing to throw a kottabos-toss. The middle symposiast, wearing a peaked Scythian cap, swivels back to the kottabos-thrower and extends his right arm toward him. The last symposiast on Side A is drinking from a kylix, face frontal. All wear himations.

On Side B (fig. 12.3) three more symposiasts recline singly on klinai; each wears a himation.\textsuperscript{217} On the far right stands a large amphora, decorated with a figured scene; hanging above it is an oinochoe. We see the bearded symposiast on the right from behind,\textsuperscript{218} as he turns slightly to face the middle symposiast. He extends a mug towards the latter as he engages in conversation (see below). The middle symposiast, also bearded, has turned back to face the speaker, and appears to be resting his right hand on his own left shoulder,\textsuperscript{219} as the two look directly at each other. In front of his kline stands a small table upon which rests a kylix. The third symposiast, an unbearded youth, reclines while tuning his barbitos. On the wall, above him and to the left, hangs a shield. A young, long-haired, naked attendant approaches from the far left with a ladle in his hand. Around both sides runs a thin reserved band on top, and a thick band on bottom, upon which rest the klinai.

\textsuperscript{217} The two rightmost symposiasts wear their himations over the left shoulder, while the leftmost symposiast does not.
\textsuperscript{218} As Csapo & Miller point out (1991, 369, n. 13), and also Jacobsthal (1912, 57-58), this is a pose with which Douris experimented. Cf. Jacobsthal's Abb. 78 (1912, 37), London E49 and Abb. 79, (1912, 58) from Florence. As he points out (1912, 61) the man on the cup from Florence also wears a "skythische Mütze", as do other symposiasts on Attic vases. This type of headress is named the kidaris (cf. Miller, 1991).
\textsuperscript{219} Csapo & Miller note (1991, 372, n. 29) that, according to T.J. McNiven, such gestures are rare in Attic vase painting, and many of the examples are in conversation scenes.
Post-firing inscriptions are found in the tondo and on both sides; the tondo inscription is of the most interest — it has been attributed to a fragment of Praxilla (*PMG* 754), but sides A and B need to be discussed also. First, however, the archaic nature and the authenticity of the inscriptions need to be addressed, since their value as evidence for a *skolion* fragment of the period might be seriously undermined if they were a late addition. However, Jacobsthal supports, albeit indirectly, the possibility that the *skolion* fragment might still be valuable as evidence of an archaic poem (*id est* Praxilla’s or near her): “Die Paroinia der Praxilla waren auch 422 noch en vogue: ... das im Symposion der Wespen gesungen wird, ἐν τοῖς Πραξιλλίους δέρεται παροινίας (schol. vesp. 1239). Freilich ob nun unser Paroinion, das Hephaistion als praxilleischen Musterves bringt, wirklich von Praxilla stammt, ist sehr fraglich. Denn die Authentizität dieses Buches ward schon von der alexandrinischen Grammatik mit Recht bezweifelt.” Although the inscription may have been added at some point later than the archaic period, the text may very well have been an archaic *skolion*; this inscription on a kylix in archaic style dated to about 470-60 B.C. may still offer as much information as a “completely archaic” container.

Side A, as I have already mentioned, has a symposiast about to complete a *kottabos*-throw. As on several other vases, the thrower pronounces a toast to his lover, or desired lover, just before completing the toss. The inscription on this cup runs retrograde away from the thrower’s

---

220 Jacobsthal (1912), 63. But, assuming the antiquity of the inscriptions as shown by Csapo & Miller (1991), this vase does demonstrate at least the possibility that Praxilla was the author.

221 M. Kilmer mentioned (pers. comm.) that antiquarian detail is not common on the containers, although it can be seen on sculpture. That is, it is not likely that a Hellenistic owner added these inscriptions to make it look “more archaic”. The provenience is unknown; if known, it might clear up this problem if the context was early.

222 A psykter by Euphronio, Leningrad 644 (St. 1670), ca. 520 B.C.; a hydria by Phintias, Munich 2421, ca. 520; a cup (Proto-Panaetian Group), Munich 2636, ca. 500 B.C.; a stamnos by the Copenhagen Painter, Louvre G 114, ca. 480 B.C. Interestingly, the first three are in scenes of women at *symposia*, while the last is of Dionysos, Herakles and a saxyr. This vase is the only one listed by Csapo & Miller (1991, 372) which records a love-toast from a man, although there many scenes of men throwing the *kottabos* on other vases. The practice is well known among men in literary sources (see Jahn, 1867).
mouth, and then orthograde back again (that is in between the two men) TOI || <L>ΔΞΕΤΙ, “τοι Λαξένι”

The ‘τοι’ is immediately recognizable, and is similar to other toasts found on Attic red-

figured containers, but the second word is not. Csapo & Miller suggest that the word continues

the thought started by the speaker of TOI, despite the distance and reversed direction of the letters

(i.e. boustrophedon as on side B). They propose a solution to the problem, suggesting that

another letter was inscribed before the alpha:

A recent cleaning of the cup ... has removed modern over-painting of
the damaged surface extending below the hat wearer's eye from the
hat's lappet to his upraised right hand. This 19th-century restoration,
visible on all the published photographs ..., concealed the possibility of
a lacuna in the text, for if the inscriber began his text in the usual
fashion by placing the initial letter as close as possible to the speaker's
mouth, the break destroyed every trace of it. As in the tondo, there is
ample space for an incised letter between the face and arm of the
speaker. One should not hesitate to supply a lambda, the only letter
which can offer a satisfactory reading of the inscription: [Λ]ΔΞΕΤΙ,
dative of the Athenian masculine name Laches and a kalos-name
which appears six times on vessels by and in the Manner of the
Antiphon Painter (ca. 500-480 B.C.)

---

223 Leningrad 644: TINTANΔΕΛΑΤΑΣΩ || ΔΕΛΓΡΕ (retrograde) “I am throwing this latax (wine lees)
for you, Leagros” (TIN is possible abbreviation for τοι pronominal; M. Kilmer, pers. comm.); Munich
2421: ΣΟΙΤΕΝΑΙ ΕΥΘΥΜΙΑΔΙ (orthograde) “[I throw] this [latax] for you, Euthymides”; Munich 2636:
ΤΟΙΤΕΝ(ΔΕ?) (see following example); Louvre G 114: ΤΟΙΤΕΝΔΕ (retrograde) “[I throw] this [latax]
for you”. Csapo & Miller discuss several possibilities concerning the syntax of TOI (1991, 378-79), but I
am chiefly concerned here with the tondo inscription.

224 The “problem” was that the word does not seem to be Attic, nor even Greek, as it stood then —
ΔΞΕΤΙ. It was variously understood as an un-Greek word by Jacobsthal (1912), 61-62: “Ebenso, glaube
ich, wird man auf unserer Schale die Inschrift ΔΞΕΤΙ als echtes oder fingiertes barbarisch hinnehmen
und nicht den Versuchen machen, ihr durch Konjektur einen griechischen Sinn aufzuzwingen.”; a Doric
variation for the Attic-Ionic word ἄξενη by Wilamowitz (1913), 121: “Aber ἄξενη, was der nächste sagt
oder singt, wird der Anfang eines Liedes an eine Cicade sein, die ἄξενη sehr gut nach dem ἄξενη τέττηται
genannt werden konnte.” Wilamowitz does not suggest a reason why one would sing a song to a cicada.

225 Csapo & Miller (1991), 376.
In this way, the man in the hat is responding to the thrower’s toast, perhaps specifying the actual name of the desired one.\textsuperscript{226}

The inscription on side B seems to be a conversation between the two symposiasts ΦΑΣΙΝ || ΑΛΕΘΕΤΑΥΣ ᾗ ἵνα διηθή ταῦτα”. It also is boustrophedon, which, as Csapo & Miller point out, is very rare in this period, having fallen out of use near the end of the sixth century,\textsuperscript{227} although there are examples in the first quarter of the fifth century B.C. in which orthograde and retrograde forms appear on the same scene, most commonly to clarify attribution of a name to a figure or speech to a speaker; this is the case here. The inscription has been variously understood as the beginning of a song-fragment (skolion)\textsuperscript{228} or as part of a conversation.\textsuperscript{229} It is, of course, very tempting to regard this inscription as another example of the skolion on an Attic (to all intents and purposes) container. The evidence, however, points the other way. First, the poses of the symposiasts connected with the inscription do not match the standard position of singers (such as the singer in the tondo scene); this fact by itself, however, would not discount the possibility, since variations are evident on other containers. Second, the symposiast(s) who speak(s) it does(do) not seem as much connected with the lyre player visually as to each other. Furthermore the rightmost

\textsuperscript{226} Csapo & Miller offer the example of the satyr on the Louvre G 114 as a parallel. The satyr is clarifying Dionysos’ toast. If Dionysos is toasting Herakles, the name might be meant as a rude nickname (λίκος as the nickname of pederasts, \textit{LSJ s.v. λίκος}, vi.) perhaps in reference to Iolaos, Hylas or Eurystheus; the completion of the toast could also be to Lykos, one of the sons of Pandion, who was a guest of Herakles when he murdered his children (the satyr’s completion may thus be in bad taste); Lykos is also casually connected to Dionysos through the story of Dirce, Antiope and her sons Amphinom and Zethus. In any case, I am at a loss to provide a reason, from the extant literary tradition, for why the satyr completes the toast with the name Lykos. If no reason can be found, it might weaken, however slightly, the parallel drawn by Csapo & Miller. LVKΟΣ is also a common kalos-name on black- and red-figured vases (Beazley, \textit{ARV}² 1595-96). It is also a common Attic name, as well as a common kalos-name for Onesimos (and near Onesimios), Antiphon (and in the manner of Antiphon), et al (see \textit{ARV}² pp. 1595-96). The name also appears as an athlete’s name on a calyx-krater by Euphronios (Berlin 2180; \textit{ARV}² 13.1).

\textsuperscript{228} Jacobsthal (1912), 62; Herzog (1912), 20; Campbell (1964), 66.

\textsuperscript{229} Wilamowitz (1966), 121; Csapo & Miller (1991), 372.
symposiast’s stance (holding his own shoulder) is seen in conversation scenes. Fourth, but perhaps least important, is the possible parallel to extant literature. The possibilities put forward by Csapo & Miller for verse parallels are not satisfactory, particularly since the verb ἱστημι is not present in them. The suggestion of Immerwahr (Csapo & Miller, loc. cit) that the fragment introduces a story is far more satisfying, as is the supporting example provided by Csapo & Miller. None of the three reasons outlined above would, taken alone, necessarily discount the possibility that this is a skolion fragment. With these reservations in mind, however, I do not think that the scene conveys an impression of singing. In addition to these points, the youth on the left is not playing the barbiton, but rather is tuning it. Another possibility arises if we consider this inscription with the tondo inscription: this inscription acts as emphasis for the tondo inscription; the two symposiasts speak the sentence at the same time.

The skolion found in the tondo issues from the mouth of a symposiast in a variant of the standard singing position. The inscription runs retrograde (with orthograde letters) from the singers mouth: Ο ΔΙΑΣΘΕΣΘΡΙΔΟΣ “ὁ διὰ τῆς θυρίδος”. The O, placed separately in the space made by the crook of the singer’s arm, secures the inscription firmly to the mouth. The inscription could well be a variation on Praxilla 8 (PMG 754), which survives from Hephaistion 43:

\[
\begin{align*}
\text{o dì a tòv thuridou naldh émblétpousa} \\
pardhèn tòv kefalán tò ἀθερεθ νύμφα \\
\text{O young maiden, carefully looking in through} \\
\text{the windows at the head and what’s beneath}
\end{align*}
\]

---

230 T.J. McNiven *apud* Csapo & Miller (1991), 372, n. 29. The “gesture is comparatively rare ... many of the examples ... are in conversation scenes.”
231 Csapo & Miller (1991), 372, n. 32.
232 Luc. Fug. 1.1: ἀλλαθή ταύτα ἱστημι, πάτερ ... 
233 cf. Maas & Snyder (1989), 123: “The method of tuning the barbiton was the same as for the lyra, with the left hand in playing position to test the pitch by plucking the strings and the right hand at the crossbar to adjust the individual kollopes.”
234 Although only the E is absolute for direction. Sigma, generally settled by this date, can still vary in its direction.
Although Page prints the plural, he does recognize the singular as a variant reading, stating at the same time that the plural for a singular would be very abnormal. Herzog certainly considers that the kylix bears a truer witness, stating, "Mir scheint für die alte Zeit der dichterische Plural weniger passend, ich möchte daher die Lesart der Schale vorziehen, die natürlich aus der attischen Färbung in die lyrisch-dorische Koine διὰ τας θόριας zurückübersetzt werden muss." The change to the singular does not affect the elegiac metre of the Praxilla fragment.

There is no reason, especially when the oral nature of sympotic poetry is taken into account, that the two readings may not be the "same" poem. If we recognize, as we should, that much poetry at this time is occasion specific, it is not hard to imagine a situation in which a singer adapts a song to make it more relevant to his situation. Perhaps this singer is indicating that the young maiden is looking in through one window only, his own. Pure speculation of course, but quite probable nonetheless. The verse-scrap taken in this way records the first words of a poem.

If we admit speculation as to the possibilities of attribution and interpretation as well as the probabilities, I would like to suggest my own. The idea of wine (intoxication) as the enhancer of all human characteristics, and as a means by which people entered into deeper knowledge of each other, either as friends or as acquaintances, is seen in many ancient writers, even as far back as Homer (Odyssey xiv, 464 ff.; xxi, 35 f.), Theognis (499-500), Aischylos apud Athenaios (10.427f), Platon (Laws 649D-650B). The idea has achieved a certain notoriety in modern times through the Latin phrase in vino veritas, a notion originally seen in Alkaios Z43 LP,

---

235 Herzog (1912), 19.
236 At least one other suggestion has already been made, as have a number of possible parallels. Cf. Aly (1954) RE s.v. Praxilla, cols. 1764-65 connecting the fragment to a skolion in Athenaios XV.697b-c; I do not find the argument persuasive. Cf. Herzog (1912), 18-20 for parallels.
and the Paroemiographers.237 Plutarchos, in his Moralia (Q.C. III. 645 A-C) outlines this idea, and provides an interesting quotation which may offer an alternate possibility for the inscription in the tondo of BM 95.1-27.12. He criticizes Aisopos for trying to discover other windows (τὰς θυρίδας) through which (δὴ δὲν) one might discern another’s mind, when wine offers the best:

τὸ τὰς θυρίδας, ὡς μακάριος, ἤτεις ἐκεῖνας, δὴ δὲν ἄλλος ἄλλον κατόλειπεν τὴν διάνοιαν ὡς γὰρ οἶνος ὁμάς ἀνώγηκε καὶ δείκνυσιν οὐκ ἐώς ἠρμῆν ἀγεν, ἄλλ' ἀδικῶς τὸ πλάσμα καὶ τὸν σχηματισμὸν, ἀποτέλεσα τοῦ νόμου καθάπερ παιδευγμοί γεγόνεσιν.

Why, good man, do you seek those windows, through which one will discern the thought of another? For wine reveals us and bares us, not allowing us to keep control, but ruining our crafted image and our pretense, drawing us furthest away from our custom as from our training.

The window, then, of the inscription may refer to wine, a suitably appropriate topos for sympotic poetry, which is the window to the character and thoughts of another. Side B may, with its inscription, support such a suggestion; this may be stretching the evidence. But although the notion of wine linked to truth is old, the association of wine as a window to the soul cannot be shown to exist before Plutarchos, except perhaps through reference by Plutarchos to Aisopos. Taken this way, then, although it may stretch the evidence too far, the verse-scrap skolion depicts the beginning of a poem connecting wine and true knowledge of others.

Manner of the Tarquinia Painter. Fr. in Rome, Villa Giulia 50329; ARV² 872.26.

A small fragment (fig. 13) from a rhyton, or perhaps a kantharos,238 depicts the upper torso and head of a singer in the classic pose. The singer is heavily bearded and has hair on his
chest. Beazley attributes this fragment to the Tarquinia Painter. Concerning the inscription on the fragment, ΣΟΙΚΑΙΕΜΟΙ, σοι και ἐμοὶ “for you and me”, Beazley writes:

Cultrera, who published the fragment, does not mention the inscription although the first three letters, ΣΟΙ, are plainly visible even in the reproduction. I have never seen the fragment, but Dr. Christopher Clairmont has kindly examined it for me, and he reports the letters as ΣΟΙΚΑΙΕΜ... retrograde. This cannot be anything but σοι και ἐμοὶ, whether the painter wrote anything further, or, as is likely enough, stopped at this point.

Beazley parallels the words, which are a complete dactyl, to Theognis 1055:

'Αλλὰ λογον μὲν τοῦτον ἔστησεν, αὐτὰρ ἐμοὶ σὺ 
αἰλει, καὶ Μοῦσσων μηνόμεθ ἀμφότεροι.
αὐταὶ γὰρ τὰ τὰ ἔδωκαν ἵτην κεκαλομένα δῶρα
σοι καὶ ἐμοί, μελέμεν δ' ἀμφοτερικίαν.

But let us end this conversation; moreover play the aulos for me, and we will both remember the Muses. For they gave these very lovely gifts for you and me to have. We care for those around us.

Later (1957) he reports that Miss Mabel Lang suggests Mimnermus 8:

ἀληθεία δὲ παρέστω
σοι καὶ ἐμοί, πάντων χρῆμα δικαιότατον.

let there be truth
for you and me, the most righteous possession of all.

Either suits the symposion thematically, and both were probably sung in this context. While the verse-slap is not the first part of either passage as recorded, it is nevertheless the first part of a line in both, and in this respect may serve a similar function. If the verse-slap skolion is from one

239 ibidem.
240 ibidem.
241 The [ai] in hiatus before another vowel is short.
of these passages, then, it seeks not only to bring the poem to mind, but also to emphasize the partnership, or shared experience, of the two people (i.e. you and I). All other verse-scrap examined in this thesis, however, seem to begin a poem from the first words of the first line. On this analogy, ἙΟΙΚΑΙΕΜΟΙ may record the beginning of the first line of another poem, which does not otherwise survive.

**Unattributed, Kylix in Athens, National Museum 1357.**

An unattributed cup in the National Museum at Athens (figs. 14.1-14.2) provides another example of a skolion which is often, if not always, compared with Theognis 1365. Although the cup is unattributed, its tondo scene (I have not seen the exterior) seems to me to be Brygan.\(^{242}\)

The skolion is found in the tondo scene, in which a bearded adult male wearing a dotted himation reclines on a kline, the legs of which are not pictured, against a striped and ribbed bolster. His head is tilted back to sing, beard pointed sharply up, while he reaches down with his right hand to stroke a hare, which makes sense as a love gift for the boy mentioned in his song. In his left hand he holds a pair of krotala;\(^{243}\) his left arm carries a fold of his himation. The inclusion of the motion to stroke the hare in what is otherwise a standard singing position has created a problem of

\(^{242}\) Although I am certainly very inexperienced as far as attribution is concerned, there are, I think, several good reasons to support this suggestion. In terms of technical details, note in particular the shape of the eyes, the smooth rounded stroke of the eyebrow as well as the rounded nose and flat forehead. Several details speak against an attribution to Brygos himself, however: there is no meander border; single figure composition is rare in tondo scenes by Brygos Painter (he prefers a V composition in tondo scenes, cf. Beazley (1953, 78); Brygos Painter seems to enjoy detail in klinai, and usually includes at least the leg posts, but not always; the singer has no ‘extra’ body hair (but not every man by the Brygos Painter does); also the wreath is not of the type commonly painted by the Brygos Painter. The subject (a singer at the symposion) is certainly common enough in most workshops, but this scene portrays a sense of movement or action which is characteristic of the Brygos Painter and his circle; the painter has decided to make his figure dynamic, fluid. In addition, the tondo scene is almost a “close-up”, another frequent tendency of these painters. The details are also worth mentioning: the hare, the dotted himation, the striped and ribbed bolster, the food basket. The cup should, then, be dated to the 1st quarter of the 5th century B.C.

\(^{243}\) A common percussion instrument (akin to the castanets), krotala were associated with Dionysos and Cybele but can also have an erotic connection, Barker (1984, 76, n. 89).
composition for the painter, at least from a modern point of view. The movement of the arm down to touch the hare has resulted in what seems to be a collapsed shoulder. It seems clear that the painter considered both actions to be essential to the scene (he could have merely represented a hare underneath the kline without physical connection to the singer) and so did what was necessary to represent both. Both actions are intended, perhaps, to impress a boy, the object of his affection, or perhaps to demonstrate to others his affection for the boy.244

The skolion inscription, which Lissarague describes as, "emerg[ing] from the figure's mouth and follow[ing] the curve of the tondo, as if to fill the whole space with sound,"245 describes the love object: a boy (but see my n. 244). The lettering is quite neat, proceeding from the singer's mouth in an arc, above the food basket and along the edge of the reserved border. The pi is squat;246 the two omicrons (the first of course is long, an omega) are almost triangular — the second is almost identical to its neighbouring delta. The lambda are upright (in relation to the arc of the writing), but the two arms are almost the same length; a doubled long consonant is not uncommon in this period and the Brygos Painter doubles lambda in KALLISTO on London, British Museum E68 (fig. 7.2) although he does not double the pi in ΠΗΛΩΣ (Φαίνεται) in the same tondo. The sigma is orthograde in what seems otherwise a retrograde inscription, but this is not uncommon in this period. This fragment is identified with Theognis 1365:

*Ο παιδικόν κάλλιστον καὶ ἱμεροειδάτα πάντων
O most beautiful and most charming of all the boys

---

244 Of course, the inscription could indicate that the person for whom the verse is intended could be a girl, since there is no way to distinguish a long E (fem. vocative) from a short (masc. vocative) in this period. But this is unlikely, not because of the metre (the long final vowel of the feminine vocative would complete the third dactylic foot), but because of the presence of the hare, a sure indication of a homosexual relationship (see Dover (1989), 92-93; Kilmer (1993), 14, 96).

245 Lissarague (1990), 132

246 Perhaps Immerwahr’s type 5 with a shortened stem.
It is very tempting to say that we have here a record of extant sympotic literature in performance at an archaic symposion. I think that this temptation is honest enough (if there is such a thing as an honest temptation): given the relative scarcity of both vases and sympotic poetry, and despite the fact that most sympotic poetry may never have been recorded in writing, anything that matches from both source areas is immediately, it seems to me, considered one a match of the other (and often the artistic a copy of, or dependent on, the literary). Often, once the “match” is made, the search for alternatives ceases, as in the case of the Douris copy in London, in my opinion. Admittedly however, in this case, the exact coincidence of words and their order, as well as a poetic theme supported by the artistic theme, is considerable. Although a complete line would make an attribution even more secure, I believe that this verse-scrap can plausibly be identified with Theognis 1365. The metre would fit this identification, since the verse-scrap records an elegiac line (i.e. dactylic hexameter) to a feminine caesura. The verse-scrap skolion records the first words of a poem, as a title in order to bring the poem to mind, or perhaps as a mnemonic aid.\footnote{Dover (1989). 10, thinks that this phrase is used here as a poetic cliché.}
Conclusions

Conclusions which can be drawn concerning the practice of the *skolion* from the evidence of the Attic red-figured containers fall into two general spheres. One deals with the visual aspects of the evidence as it relates to the physical activity of performance. The other deals with the text as evidence in itself for the poetry performed, and collaterally as evidence for orality (as visual evidence for the public performance of poetry) and the use of writing on containers in this predominantly oral period. But first the use of the term *skolion* as a description for the activity of sympotic performance depicted on the containers must be addressed. The literary evidence is clear in its application of the term, if not entirely clear in the description of the activity nor its etymology: *σκόλιον* is used of sympotic song. The earliest preserved use of the term is c. 442 B.C., twenty to forty years after the bulk of the visual evidence. Provided we recognize the fundamental (and earliest) definition of the term as *ἡ παροίνα ὣθη*, we are justified in applying this word to the scenes on the containers and to the verse-scraps.

The visual evidence for the physical activity of singing at *symposia* derived from the painted containers is richer in many ways than the textual evidence on the containers, if only because it is — according to its own nature — complete. Of course, this nature admits only a single image, frozen in time and space. But for this very reason, the artist must portray an action clearly for it to have any relevance to his viewers. Although we may lack a certain social and historical context necessary for a full understanding of a scene, we can still often perceive the action. For example, it is evident that there is a posture associated with sympotic singing. Singing usually took place on *klinai* as the singer reclined, either with back resting on head-post and bolster, or with his weight on his left elbow; on one occasion (Munich 2636) the singer is semi-seated, while on another (London GR 1895.5-13.1, tondo) he is depicted seated (but curiously still
reclining), apparently in rehearsal for performance. In all instances examined in this thesis, the head is tilted back, to a lesser or greater degree, and the mouth is open. If the singer is not playing an instrument himself (lyre or krotala), or does not hold a myrtle twig, his right arm is used as if to cradle his head while singing and his left arm is used to support himself in the reclining position. A singer accompanying himself on the lyre invariably reclines with his back on a bolster. While the literary sources do not describe the posture of singers, the use of lyre and auloai, as well as krotala and other instruments, is well attested there as it is also here on the containers.

Although the exercise of attributing verse-scrap is not infallible, inscriptions which cannot be matched to the surviving literary tradition probably record — on the analogy of the attributable verse-scrap — the first words of the first line of a poem. If these attributions are correct, the textual variations preserved by the verse-scrap skolia raise interesting questions concerning the nature of the performance of poetry. Are these verse-scrap variations effected by the performer on the container (who probably was not the composer)? Or are they a “truer” reading of the poem as it was performed on any one occasion by the original composer? In some sense, the point is moot since in either case we still have two readings, neither of which can be shown conclusively to be more accurate, and both of which are equally valid as records of a performance of poetry at a symposion. Gentili discusses the difficulties which arise in textual criticism in cases where the “work” has passed through a period of oral transmission, as these examples of sympotic poetry surely did,\(^{248}\) concluding that “the chapter on the ecotics of the oral text has yet to be written ... A comprehensive theory must, however, be based on a typology of oral texts which takes full account

\(^{248}\) Gentili (1988), 226-233. Particularly interesting is his discussion of the notion of a linguistic (or stylistic) diatsystem, “the system of variants which characterizes an individual witness to the tradition of a particular text as a direct expression of the culture and taste of the period.” (1988, 231) I might (very humbly) add that this diatsystem will also be a direct expression of the culture and taste of an individual performer, and his audience too, within a culture.
of the different ways in which a particular composition can be oral and of the different levels — cultivated and popular — on which orality may operate. I suggest that these preserved verse-scrap do evidence, however limited, for variations in performance of some sympotic poetry; the remaining inscriptions, unattributable, offer evidence for sympotic poetry which has not survived.

What purpose, then, do the inscriptions have other than decoration? Although the length of the inscriptions is often restricted to several syllables, no inscription ends in the middle of a word. Furthermore, it is very likely that these inscriptions all represent the first words of first lines of poems. Both of these points lead me to consider that these inscriptions are in fact “titles” of poems, and to suggest the possibility that they were commissioned after performance as a sort of memorial gift. This observation is borne out to some extent by the work of Thomas who observes that although one of the earliest uses of writing was to record verse, this does not mean that its intent was to fix a text forever. "Indeed, comparative evidence tends to suggest that the impetus for writing down poetry almost always comes from outside, not from the poet himself." The inscriptions themselves presuppose no more than a phonetic literacy.

---

250 An example from antiquity is the Passer (the first word of poem 2 — poem 1 is dedicatory) of Catullus, quoted by Mart. iv.14.13: “sic forsans tener ausus est Catullus | magno mittere Passerem Maroni”. In a more modern context, the psalter uses the first words of each psalm as title.
251 Another possibility is that the work was commissioned before performance, and that the inscription would have acted as a reminder for performance. But while the first words might be a mnemonic device intended to trigger the rest of the song, the placement of the overwhelming majority of these inscriptions at the bottom of the kylix (in the tondo) might render such a function problematic. I find it hard to accept that an individual performer would need such a mnemonic device to remember a short poem.
252 Thomas (1992), 48.
253 Thomas (1992), 48. In n. 56, Thomas quotes West (1990) stating that even the Greeks themselves thought Homer recited while others wrote it down.
254 See discussion in Thomas (1992), 92, where she borrows the term from a study of the “literacy” of the Middle Ages by P. Saenger: “the possession of enough reading ability to puzzle out the syllables aloud in order to learn a text by heart, or to say prayers aloud, but not to read silently with immediate comprehension.”
To sum up, the practice of sympotic singing as it is represented on this limited selection of Archaic Attic red-figured containers is restricted to solo-singers who accompany themselves with lyre or krotala, or who are accompanied by another musician on the diaulos. Both the lyre and diaulos are instruments of choice for these solo-singers. There is a basic posture associated with sympotic singing, although variations in this basic posture are possible when certain singing aids, an instrument, for example, or a myrtle twig, are held/used by the singer. The poems sung by the soloists vary in metrical structure, as far as can be determined from the few syllables which remain; the thematic material also varies. These inscriptions may have been commissioned as memorials for particular performances. Some of these inscriptions are attributable to surviving sympotic literature and may represent an occasion of performance separate from performance(s) by the original composer; as such they are evidence for the oral aspect of sympotic poetry. The remaining inscriptions, which cannot be satisfactorily attributed, remind us, perhaps, of the extent of sympotic poetry which does not survive.

The scope of the evidence from the containers examined in this thesis, limited to containers with inscriptions, does not permit wide generalizations concerning the divisions of singing described in the etymological sources. By establishing the presence of a verse-scarp inscription as the main criterion for the admission of a container in this study, I unknowingly narrowed the field of evidence from which I might draw conclusions, since each of the verse-scrapas I have accepted as skolia is sung by a solo performer. In this respect this study may have been flawed; there may be scenes of group singing, for example, on containers without verse-scarp inscriptions. However, although I may not be able to draw general conclusions concerning divisions of performance, I can conclude that the examples examined here — important and prominent because of their inscriptions
— all portray solo-singing (with the possible exception of the klyix by the Foundry Painter) by men only. Where the scene is complete (i.e. not fragmentary) the singer is always accompanied by an instrument, whether by himself on the lyre or krotala or by another on the diaulos.\textsuperscript{255} The single exception to this rule is the klyix by the Brygos Painter in Florence (3949); here the youth — head tilted slightly back in singing posture — vocalizes to a myrtle twig. It may be, since there is no other musician present in the scene, nor any item which might somehow indicate the presence of another musician, that the young man is reciting/chanting (perhaps antiphonally to his auloi), a practice known as parakataloge.\textsuperscript{256} The use of the myrtle twig here, and in the scene on the klyix by Onesimos in Munich, might be taken as an indication of the practice of “capping” described in the scholium to Aristophanes’ \textit{Clouds} 1364, one of whose characteristics was the passing of a myrtle twig; but the visual evidence cannot be considered conclusive in support of this suggestion because of the “snap-shot” nature of the scenes on the containers. The limited nature of the evidence does not permit us to evaluate the divisions of performance described by Dikaiarchos and accepted by most later etymologists; nevertheless it seems clear to me — because the inscriptions are exclusive to solo-singing — that solo-singing was the most distinguished mode of performance. In this way, the etymologists’ overwhelming claim that the practice derives its name from the path of solo-singing (irrespective of the object which marks that passage) receives some measure of support.

The manner of performance represented on the containers, quite apart from any divisions of performance, seems to match the literary sources: both lyre and diaulos are used, as well as percussion instruments (the krotala, for example); both female musicians (Munich 8935) and male

\textsuperscript{255} If the remainder of the frs. by the Brygos Painter (Cab. Méd. 546) and the frs. in the Manner of the Tarquinia Painter (Villa Giulia 50329) should turn up, I expect that they also would portray musicians accompanying the singers, probably on the diaulos.

\textsuperscript{256} West (1992), 40.
musicians (Munich 2636; London GR 1895.5-13.1; Munich 2646; London 95.1-27.2) accompany the singer when he does not accompany himself; the singing takes place within the immediate context of the symposion. In addition, the metrical and thematic diversity evident in the literary sources is borne out, as far as can be determined, by the verse-scrap inscriptions preserved on the containers. Different manuscripts provide variant readings; these containers may have other variant readings.

This selection of evidence from the containers, limited by the demands of the thesis, is not sufficient to draw any hard and fast conclusions concerning the practice of the skolion in Archaic Athens. Supplemented, however, by the literary sources written by authors removed to a lesser or greater degree from the Archaic period, this small assortment of containers — singled out because of their verse inscriptions — does paint a picture, however hazy, of this sympotic practice. Clearly, an in-depth and comprehensive study of the visual evidence is needed in order to trace the development, and probable evolution, of the practice of singing at the symposion. “Music, intonation, modes of performance, are exactly the elements which are barely recorded by our written sources. But some indications are there, and though it requires some vivid imagination to envisage the performance of Greek poetry, it is perhaps, as Herington has recently said, one of the most urgent tasks of all for the student of Greek poetry.”257 Music and intonation are almost certainly irrevocably lost; but the large body of visual evidence provided by Attic containers preserves the mode of performance, and demands closer attention.

Table 2: Ancient Etymologies (Continued)
APPENDIX I: The Dates of the Scholia

The commentaries on Aristophanes passed through several stages of composition, editing, additions and recension. Accordingly, dates for individual passages from the scholia which do not include reference to a particular commentator will be inconclusive. Enough is known, however, about the genesis and development of the commentaries, and about some of the ancient scholars who contributed to what remains for us today, that general dates may be proposed.

The commentaries probably came about through the work of Euphronios or Kallistratos based on the slightly earlier work of other Alexandrian scholars in the second half of the third century B.C., among them Kallimachos, Eratosthenes, and Aristophanes of Byzantium. Aristophanes succeeded Eratosthenes as head of the Alexandrian Library, c. 200 B.C.; it is he who is credited with a critical text of Aristophanes’ works. After these two commentators came Aristarchos of Samothrace (b. 215 B.C.), and a short succession of other scholars. But it was Didymos, who lived about the time of the end of the Roman Republic, who produced the first variorum commentary on Aristophanes. Our knowledge of the earlier commentators depends largely on his compilation. Symmachos, whose dates are not known, but whom Dunbar places c. 100 A.D.,\(^1\) compiled the second variorum commentary. Dunbar supposes his work to be largely a repetition of Didymos’ where Symmachos agrees, but occasionally he takes an independent view, “usually with a better idea, although once perhaps wrongly”\(^2\). A third and anonymous editor of

the commentaries produced an edition some four hundred years after Didymos. This editor seems to have had access to Symmachos, but not to Didymos or earlier scholars. But as White writes:

Even with so much determined, however, it is not now possible to assign any considerable number of the extant scholia specifically to their sources, a disability that was shared by the anonymous editor . . . These sources were not named in it except for special reasons;\textsuperscript{5}

The anonymous editor probably did not contribute to the scholia, except, in his capacity as editor, to retain or reject material.\textsuperscript{6}

We can place the various stages of the development of the scholia into three time periods, in only two of which are the editions expanded: the original scholars of the Hellenistic period, and the \textit{variorum} editors of the Late Republic (Didymos) and Early Empire (Symmachos). For the purposes of this thesis I have considered any scholium in which no specific source is named as dependent on, and therefore datable to, Symmachos or Didymos through Symmachos.
