Non-responsive

**B. Staff specific**

- Employees who tests positive will let their Superintendent or designate know as soon as they get results so the investigation and contact tracing may begin.
- All staff identified as contacts with the positive staff will be called by management, told to self-isolate and advised to get COVID testing while awaiting contact from Public Health.

Non-responsive

- While Management will ensure the least amount of information is released to ensure the confidentiality of the staff member. Staff will be asked for permission to share their name for contact tracing purposes. It should be noted that Public Health may share their names if they believe it is pertinent to their investigation.
- Through a review of shift rosters and interview with positive staff, management will determine if there are other close contacts identified.
- Management may review any available CCTV to confirm any contacts staff may have had.
- Public health officials will continue to contact individuals who test positive to begin contact tracing. However, information in the portal will provide immediate guidance to positive cases about their requirement to isolate while they wait to be contacted.

### **E. Inmate specific**

- Through interview with positive staff and review of rosters, as assessment will occur to determine if the positive staff may have infected an inmate or inmate unit. If it is confirmed that the staff member may have had close contact then the inmate unit will be treated as contact isolation and subject to the same PPE requirements as symptomatic isolation.
- Public Health and local nursing staff will determine the length of isolation and if testing is necessary.
- When a centre has been advised that an inmate has tested positive, the following steps will take place:
  - The inmate will be placed in symptomatic isolation (PPE protocols are identical for COVID positive and symptomatic).
- PHIA continues to apply even if an inmate tests positive. Any inmate who is symptomatic or an identified contact should be considered and treated as suspected positive. There would be no change to approach or PPE on the officer's behalf whether someone was suspected

or confirmed positive. The contact protocols noted above still apply.
