

SOCW 553 Library Outcomes

Each LO is tied to a specific component of Assignment 2 in this course. The first 5 LO will be used to evaluate participants on the first two interventions associated with Assignment 2 (Library Session and One-on-One's with Librarian) and all 7 LO will be used to evaluate presentations and final submitted projects.

Each LO is also tied to a specific component of Bloom's Taxonomy.

1. Define PICO(T) components for selected research topic by completing the relevant section of the PICO(T) handout (Knowledge + Comprehension) (Process Part 3.III)
2. Construct a clinical question using the PICO(T) components that are representative of the selected research topic on the relevant section of the PICO(T) handout (Application) (Process Part 3.III)
3. Identify and List potential search terms including synonyms, abbreviations, acronyms, and variant spellings based on the clinical question to begin construction of a search strategy in a Library database on the relevant section of the PICO(T) handout (Knowledge + Comprehension) (Process Part 3.IV)
4. Select Library database(s) that are relevant and appropriate to the clinical question on the relevant section of the PICO(T) handout (Evaluation) (Process Part 3.IV)
5. Apply concepts of Boolean searching, limiters, and truncation in a database that is representative of information needs of the clinical question (Synthesis + Knowledge) (Process Part 3.IV)
6. Assess and Select results of search strategy for relevance and applicability for addressing the clinical question by examining the research design and methods, sample, conclusions and results of study (Evaluation + Comprehension) (Process Part 3.IV.i)
7. Conclude and Justify if selected studies from search support the clinical question based on the summative results of those studies and the research strategy used to collect them (Evaluation) (Process Part 3.VI)
