

Graduate Earnings of Information and Communication Technology (ICT) Students

Additional Results

This document is intended to give readers further insight into the labour market outcomes of recent graduates by allowing a detailed comparison across cohorts.

We present both mean and median earnings for every cohort and group of graduates (ICT, Engineering and All Other). Additionally, we present earnings by gender and by quartile distribution for each cohort and group of graduates. Several other results, such as 1st year earnings and a quintile distribution of 1st year earnings, are also included.

In the cases where there were insufficient data to generate a graph, we skip to the next available graph.

Browsing has been simplified with the addition of links in the Table of Contents. If you would like to see a specific result, find it in the table of contents and click on the link.
